About Oncology Venture A/S

Oncology Venture A/S (Nasdaq First North Growth Market Stockholm: OV.ST) develops drugs for personalized treatment of cancer guided by its proprietary drug response predictor technology, DRP®. The company has a mature portfolio of seven drug candidates, including compounds in the pre-registration stage.

The current product portfolio includes: 2X-121 a PARP inhibitor in an ongoing Phase 2 for breast and ovarian cancer; dovitinib, which will enter Phase 2 trials for indications dependent on further Dovitinib-DRP retrospective/prospective analysis of studies completed by Novartis: Ixabepilone for the treatment of breast cancer. LiPlaCis®, a liposomal formulation of cisplatin in an ongoing Phase 2 trial for breast and prostate cancer 2X-111, a liposomal formulation of doxorubicin under manufacturing for Phase 2 in breast cancer; irifulven, a Phase 2 is ongoing for prostate cancer; and APO010, an immuno-oncology product in Phase 1/2 for multiple myeloma.

About the Drug Response Predictor – DRP® Companion Diagnostic

Oncology Venture uses its multi gene DRP® to select those patients who by the genetic signature of their cancer are found to have a high likelihood of responding to the drug. By screening patients before treatment the response rate can be significantly increased. The DRP® method builds on the comparison of sensitive vs. resistant human cancer cell lines, including genomic information from cell lines combined with clinical tumor biology. DRP® is based on messenger RNA from the patient's biopsies.

DRP® has proven its ability to provide a statistically significant prediction of the clinical outcome from drug treatment in cancer patients in 29 out of 37 clinical studies that were examined.

The DRP® platform can be used in all cancer types and is patented for more than 70 anti-cancer drugs in the US.
