First quarter 2025 and Maromba FID **Presentation**

Carl K. Arnet, CEO Jérôme Bertheau, CTO Thomas Young, CSO Brice Morlot, CFO

5 May 2025

BW Energy - Team

- Alex Almeida Regulatory Brazil
- Chris Boyers Subsurface Maromba
- Thomas Kolanski Chief Business Development Officer
- Kei Ikeda FPSO refurbishment and conversion
- Ricardo Mucci General Manager Brazil

Disclaimer

This Presentation has been produced by BW Energy Limited exclusively for information purposes. This presentation may not be redistributed, in whole or in part, to any other person.

This document contains certain forward-looking statements relating to the business, financial performance and results of BW Energy and/or the industry in which it operates. Forward-looking statements concern future circumstances and results and other statements that are not historical facts, sometimes identified by the words "believes", expects", "predicts", "intends", "projects", "plans", "estimates", "aims", "foresees", "anticipates", "targets", and similar expressions. The forward-looking statements contained in this Presentation, including assumptions, opinions and views of BW Energy or cited from third party sources are solely opinions and forecasts which are subject to risks, uncertainties and other factors that may cause actual events to differ materially from any anticipated development. None of BW Energy or any of its parent or subsidiary undertakings or any such person's officers or employees provides any assurance that the assumptions underlying such forward-looking statements are free from errors nor does any of them accept any responsibility for the future accuracy of the opinions expressed in this Presentation or the actual occurrence of the forecasted developments. BW Energy assumes no obligation, except as required by law, to update any forward-looking statements or to conform these forward-looking statements to our actual results.

No representation or warranty (express or implied) is made as to, and no reliance should be placed on, any information, including projections, estimates, targets and opinions, contained herein, and no liability whatsoever is accepted as to any errors, omissions or misstatements contained herein, and, accordingly, neither BW Energy nor any of its parent or subsidiary undertakings or any such person's officers or employees accepts any liability whatsoever arising directly or indirectly from the use of this document. Actual experience may differ, and those differences may be material.

By attending this Presentation you acknowledge that you will be solely responsible for your own assessment of the market and the market position of BW Energy and that you will conduct your own analysis and be solely responsible for forming your own view of the potential future performance of the businesses of BW Energy. This presentation must be read in conjunction with the recent Financial Information and the disclosures therein.

This announcement is not an offer for sale or purchase of securities in the United States or any other country. The securities referred to herein have not been registered under the U.S. Securities Act of 1933, as amended (the "U.S. Securities Act"), and may not be sold in the United States absent registration or pursuant to an exemption from registration under the U.S. Securities Act. BW Energy has not registered and does not intend to register its securities in the United States or to conduct a public offering of its securities in the United States. Any offer for sale or purchase of securities will be made by means of an offer document that may be obtained by certain qualified investors from BW Energy. Copies of this Presentation are not being made and may not be distributed or sent into the United States, Canada, Australia, Japan or any other jurisdiction in which such distribution would be unlawful or would require registration or other measures.

In any EEA Member State that has implemented Regulation (EU) 2017/1129 of the European Parliament and of the Council of 14 June 2017 on the prospectus to be published when securities are offered to the public or admitted to trading on a regulated market (together with any applicable implementing measures in any member State, the "Prospectus Regulation"), this communication is only addressed to and is only directed at qualified investors in that Member State within the meaning of the Prospectus Regulation.

This Presentation is only directed at (a) persons who are outside the United Kingdom; or (b) investment professionals within the meaning of Article 19 of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order"); or (c) persons falling within Article 49(2)(a) to (d) of the Order; or (d) persons to whom any invitation or inducement to engage in investment activity can be communicated in circumstances where Section 21(1) of the Financial Services and Markets Act 2000 does not apply.

Highlights

Record quarterly EBITDA

Net production of 36 kbbls/day

Substantial oil discovery in the Bourdon prospect

Maromba FID unlocking path to more than doubling production and potential for future dividends Q1 2025 net sold volume

Q1 2025 realised oil price \$74.8/bbl

Cash position \$286.9M

BWIER

Q1 Key figures ¹

BW ENERGY

Gabon

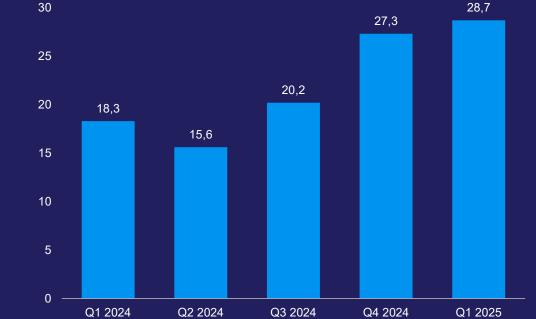

Dussafu production update

- Dussafu net production ~2.6 mmbbls, up 3% from Q4 2024
- High operational uptime
- All producing Tortue & Hibiscus wells on-line
- Operating cost¹ reduced to USD ~9.9/bbl

Net production

kbbls/day

- 40
- 35

10 1) Operating costs exclude Royalties, Tariffs, Workovers, Domestic Market Obligation purchases, Production Sharing costs in Gabon, and incorporates the impact of IFRS 16 adjustments. $\overset{\mathrm{B}}{\mathrm{W}}$ bw energy

Substantial Bourdon discovery

- Good reservoir and fluid quality confirmed by two penetrations
- Estimated ~56 mmbo oil in place, of which ~25 mmbo recoverable¹
- Additional reserves not included in 2024 Statement of Reserves
- Started planning of new development cluster following *MaBoMo* blueprint with initial four producing wells

Located ~13 km west of FPSO BW Adolo and 9 km southeast of MaBoMo facility

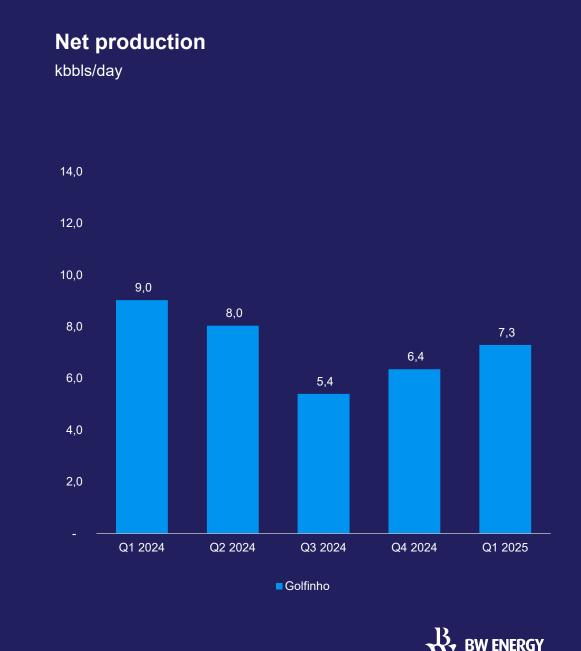

Brazil

Golfinho production update

- Production of ~656,000 bbls, up 12% from Q4 2024
- Operating cost¹ of USD 42.2/bbl
- Production positively impacted by availability of gas after completion of Petrobras maintenance
- Focus on optimisation of current production capacity and operating costs

Golfinho Boost project

- FID April 2025
- Incremental production and uptime increase and OPEX reductions
- First oil targeted H2 2027
- CAPEX-efficient project
- Attractive risk reward

Incremental reserves Production increase 12 mmbbls¹ +3 kbbls/day Breakeven at 10% CAPEX **USD 107M** USD ~47/bbl

Namibia

15

Kharas appraisal well

- Preparing to spud appraisal well in H2 2025 in northwest corner of Kudu
 - Up-dip from nearby discoveries
 - Program on track with rig selection in progress
 - Long lead items acquired
- Further major discovery south of Kudu by Rhino
 - 38 meters of net pay of light oil in PEL 85, production test at 11 kbbls/day
 - Another confirmation of Orange Basin potential

Accretive start to 2025

Bourdon discovery

Golfinho Boost FID

Maromba development FID

~7x growth in Dussafu reserves since inception

17

Incremental production, increase uptime and reduced OPEX Transformative project unlocking material value and future dividends

Maromba project FID

Transformative project unlocking material value

2P reserves¹ 123 mmboe Targeted first oil End-2027

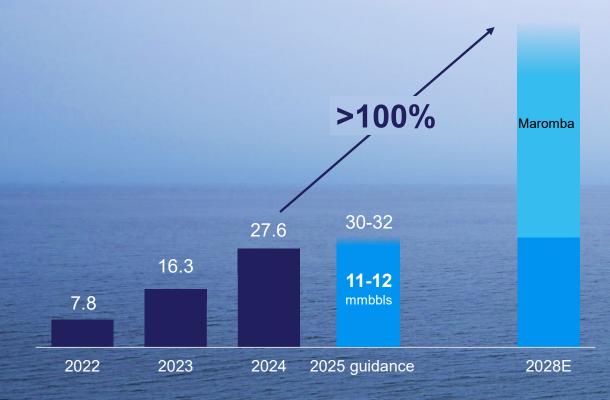

IRR at USD 60/bbl >30%

Breakeven at 10% ~\$40/bbl

1) Management estimates

Maromba will deliver industry-leading growth

Production outlook (net) kbbls/day

BW ENERGY

Low-risk development of proven barrels

- Development with 6 + 6 wells
- Highly delineated and tested Maastrichtian sands with 500 mmboe¹ of oil in place
- CAPEX-efficient development concept with refurbished FPSO and redeployed jack-up
- 100% working interest³

Development FPSO, WHP and 12 planned wells

Plateau production target 60 kbbls/day

Total CAPEX
USD 1.5 billion

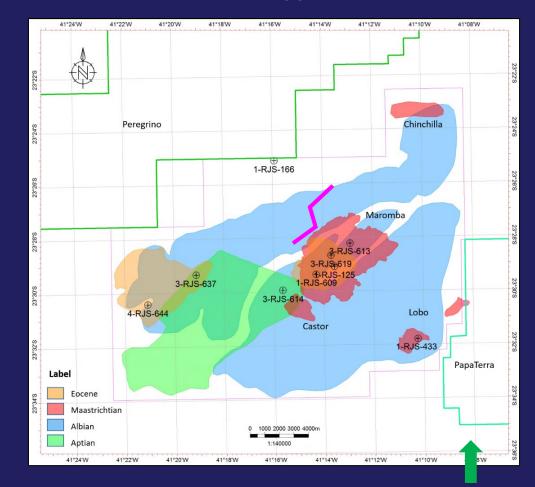

- 1) Management estimate
- 2) Assuming USD 60/bbl oil price
- Magma Oil holds 5% back-in right in Maromba licence, which they are expected to execute upon first oil

Reservoir significantly de-risked from earlier appraisal drilling

- Petrobras drilled 9 exploration and appraisal wells in main Maastrichtian and other reservoirs
- Two drill stem tests confirmed strong reservoir quality and productivity
- Maromba development will initially focus on highest return potential in most de-risked reservoir with known oil

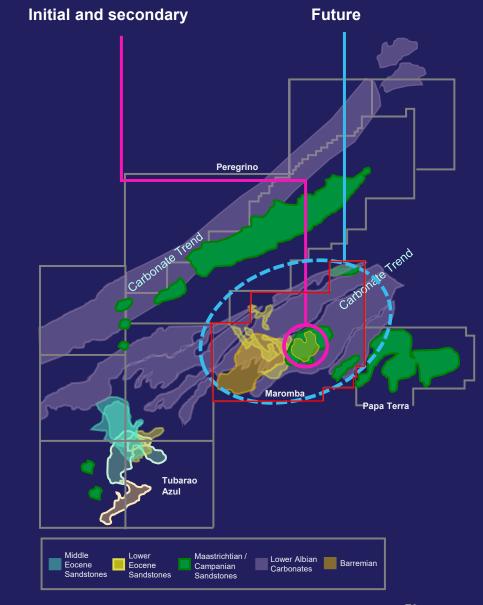

Wells confirming oil **8 of 9**

Map of reservoirs with logged oil

Unlocking Maromba's potential

Initial FPSO, WHP and 6 wells	 Capital-efficient initial development Develop proven, low-risk portion of reserve base Establish core infrastructure for subsequent expansion Operational synergies with Golfinho field
Secondary 6 wells	 Low-cost extension and appraisal Access additional reserves (Maastrictian infill and Lobo) Appraisal wells Infrastructure cost and OPEX absorbed by established production
Future	 Unlocking further reserves Test additional near-field reserves – Eocene and Carbonate Significant upside with up to 1 billion barrels of oil-in-place Further facilities may be deployed with successful appraisal and test wells

Development, regulatory and operations

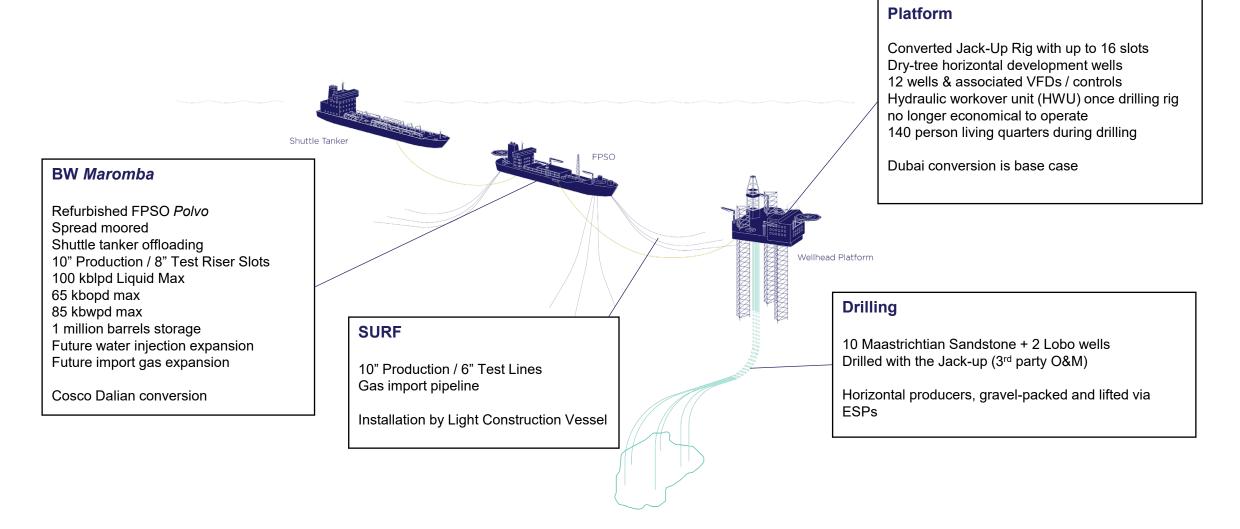

30 months from FID to first oil

- Drilling jack-up converted to integrated drilling and wellhead platform (WHP)
- SURF, construction, and installation
- Drilling and production from WHP to converted, spread moored FPSO - BW Maromba
- Infrastructure designed to support a significant future appraisal program, with capacity up to 16 wells
- Horizontal production wells with dry-trees and artificial lift via downhole ESPs
- Offtake to DP shuttle-tankers

Maromba development summary

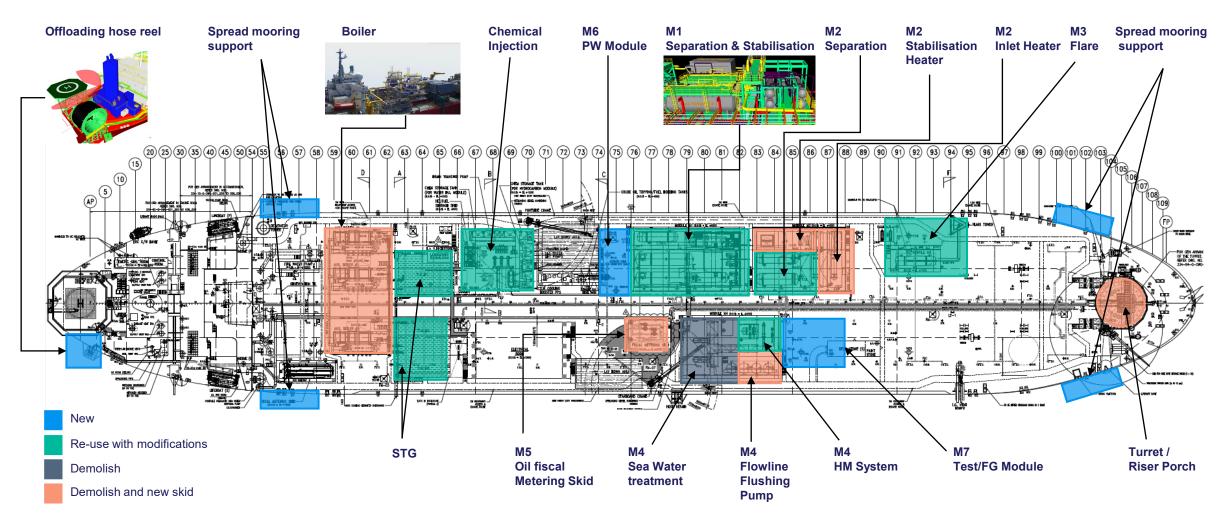

FPSO refurbishment underway

- Former FPSO *Polvo* which operated on nearby Polvo field
- Condition assessment and FEED completed
- High confidence level in CAPEX estimate and schedule
- Spread moored solution

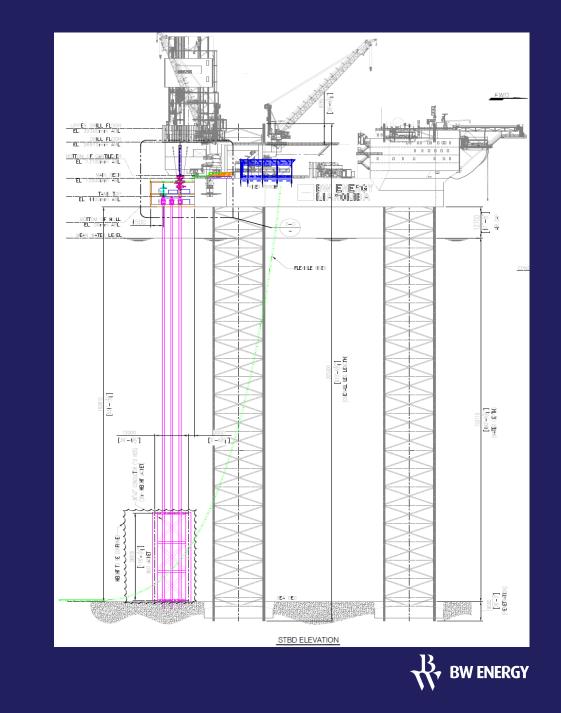

Clearly defined topside modification scope

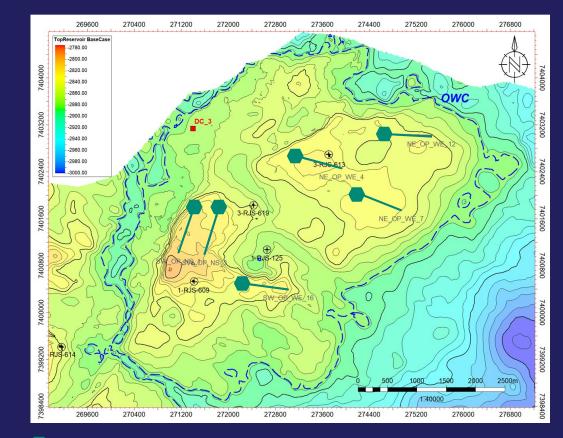

Wellhead platform with limited conversion

- Agreed to acquire Gorilla class jack-up with capacity to drill all Maromba wells
- In-house designed, prefabricated, mudline well conductor frame installed by drilling derrick
- Jack-up suitability confirmed by geotechnical survey of installation site and fatigue analysis
- Replicating successful Dussafu jack-up to production
 platform conversion

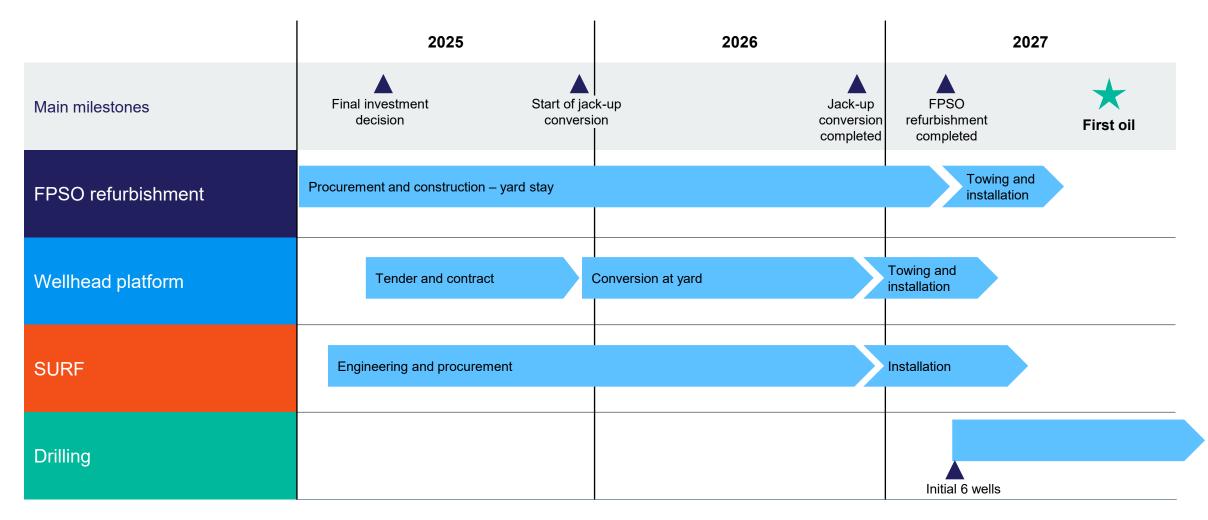

Optimised SURF and well design

- Installation of WHP ahead of FPSO arrival to accelerate start-up
- Producers targeting main Maastrichtian reservoir
 - ~2,900 meters depth with 800 metres horizontal well length
 - 100 metres oil column height
- Future flexibility to install water injectors as required
- Future facilities for tie-in of gas import for power generation
- Spare capacity for appraisal program to unlock further reserves

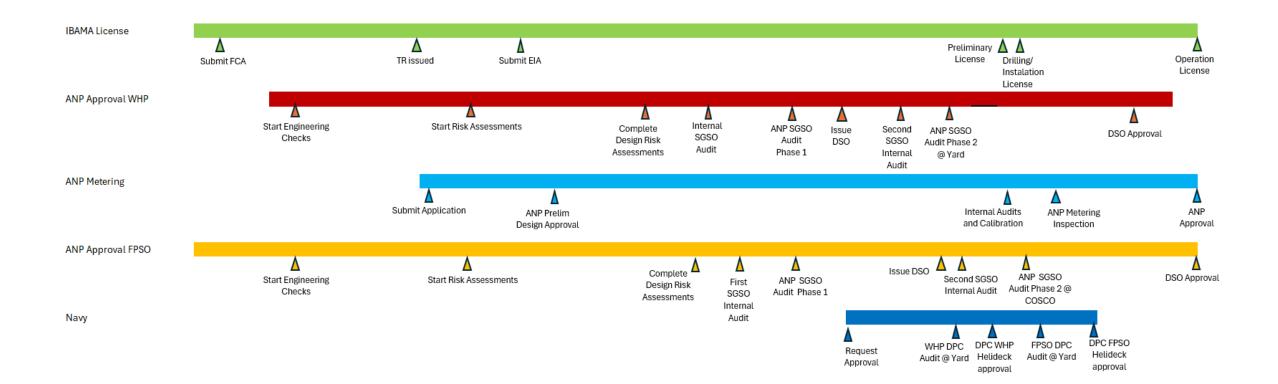

High-level development plan

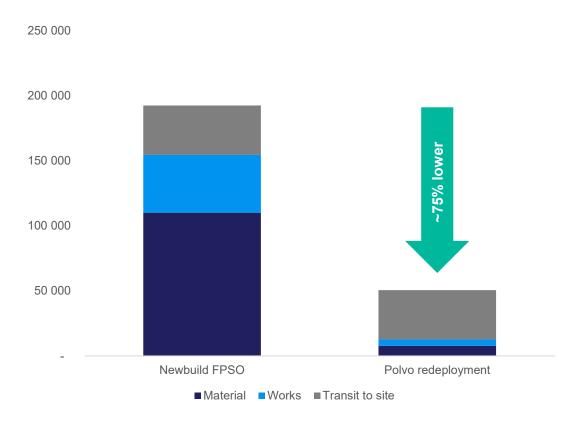

Robust regulatory roadmap

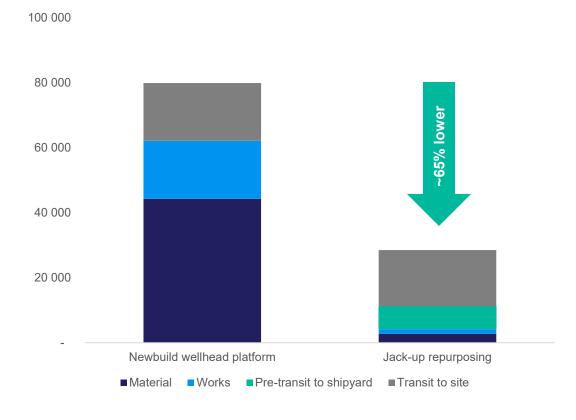

Concept enabling significantly lower GHG emissions

Newbuild FPSO vs. FPSO Polvo redeployment¹ Tons CO2e

Newbuild WHP vs. repurposed jack-up¹ Tons CO2e

Financing and project economics

Maromba capital overview

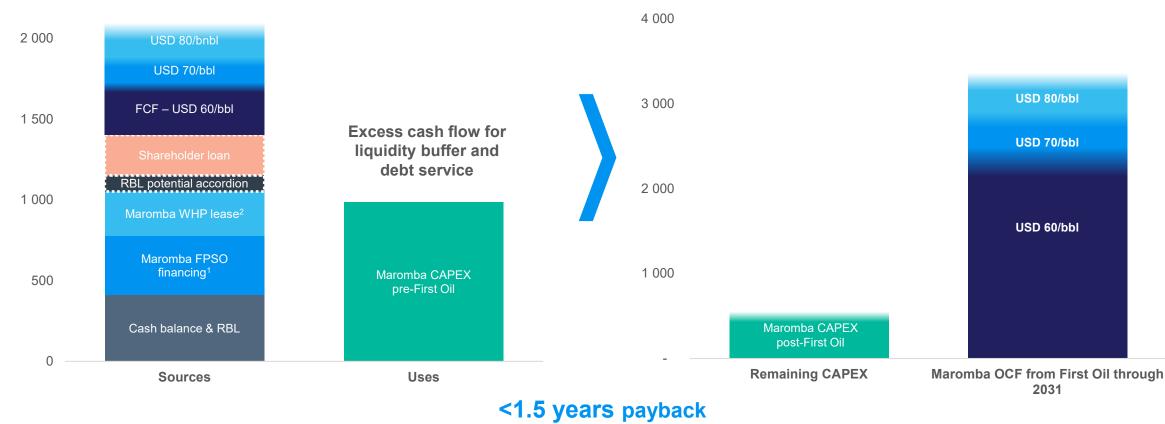

Drilling-capable WHP opening significant appraisal program

Funded through capital efficient structure

Delivering Maromba pre-first oil USD million

Maromba self-funded post-first oil

FPSO financing subject to satisfaction of conditions precedent, issuance of Sinosure policy (Letter of Intent approved), and execution of loan documentation.
 Term sheet signed for Maromba WHP financing; facility is subject to final documentation, including negotiation and execution of definitive agreements.

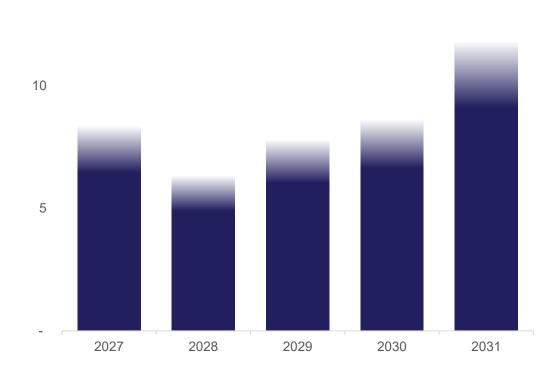

Predictable OPEX structure with ~90% fixed costs

- Benchmarked with current Golfinho and Dussafu operations, and historic data from Campos basin operations
 - FPSO
 - WHP
 - Drilling
 - Supply boats
 - Inspection
 - Regulatory
 - Construction / Maintenance

Maromba OPEX USD per barrel

15

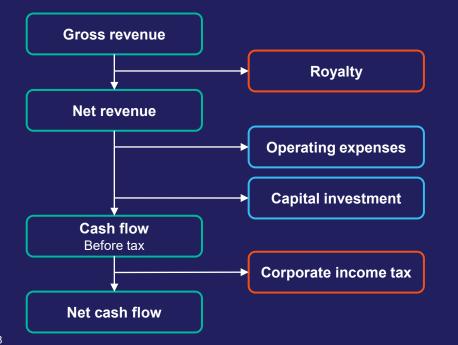

Competitive fiscal regime

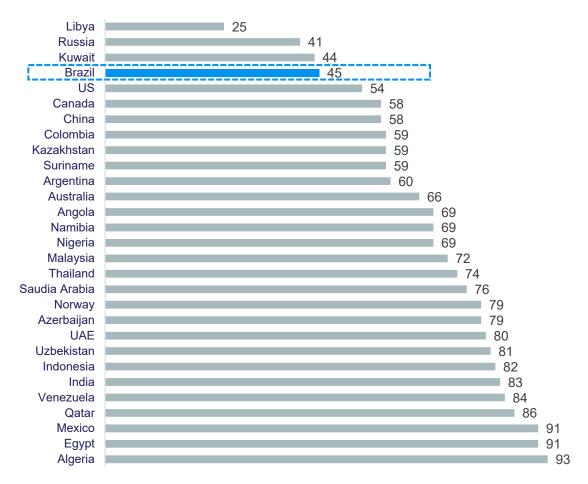

Concession overview

- BWE ownership 100% (95% after exercise of 5% Magma back-in)
- License expiry 2047
- Royalty reduction to 5% expected before first oil
- Corporate income tax 34% (including 9% social contribution)
- Depreciation: Unit of Production method with 2.5x acceleration
- Tax loss carried forward

Comparison of government takes globally¹

Total government take for projects, %

 Source: Rystad Energy – Fiscal regime. Government take is calculated as NPV of government revenue, assuming a flat oil price of USD 80/bbl

Maromba positioned among top global projects

 Optimised development plan results in one of lowest oil price breakevens among global projects

Maromba versus other major projects¹
