## About the Drug Response Predictor – DRP® Companion Diagnostic

Allarity uses its drug specific DRP® to select those patients who, by the genetic signature of their cancer, are found to have a high likelihood of responding to the specific drug. By screening patients before treatment, the

response rate can be significantly increased. The DRP<sup>®</sup> method builds on the comparison of sensitive vs. resistant human cancer cell lines, including genomic information from cell lines combined with clinical tumor biology and prior clinical trial outcomes. DRP<sup>®</sup> is based on messenger RNA from the patient's biopsies. DRP<sup>®</sup> has proven its ability to provide a statistically significant prediction of the clinical outcome from drug treatment in cancer patients in nearly 40 clinical studies that were examined, including an ongoing, prospective Phase 2 trial. The DRP<sup>®</sup> platform can be used in all cancer types and is patented for more than 70 anti-cancer drugs.
