Appendix – Sustainability Potential of Investments

Sustainability Potential of Investments. Companies may have a range of effects on employees, the community, and the environment through their operations and products and services. The Manager believes that companies that exhibit leadership in managing material environmental, social, and governance considerations, are also often more resilient, competitively positioned, and exhibit lower risk profiles. Furthermore, companies that contribute positively to solutions addressing sustainability challenges are by their nature, essential. These business models may benefit from macroeconomic and demographic trends while also contributing meaningfully to addressing global social and environmental challenges, such as outlined by the United Nations Sustainable Development Goals (“UN SDGs”). Sustainable companies, by their nature, seek to manage risks, not only related to adverse social outcomes, but also ones that might harm their license to operate.

The Investment Manager defines sustainability potential as:

- Adverse sustainability potential as companies whose operations or products/services contribute to significant adverse outcomes for people or the environment, such as outlined by the United Nations Global Compact (“UNGC”), United Nations Guiding Principles (“UNGP”), and OECD Guidelines for Multinational Enterprises (“OECD Guidelines”);
- Positive sustainability potential as companies that have an overall positive benefit to people or the environment, such as outlined by the UNGC, UNGP, OECD Guidelines for Multinational Enterprises;
- Significantly positive sustainability potential as companies whose products or services offer solutions to long-term sustainability challenges such as outlined by the UN SDGs.

The Investment Manager strives to identify and invest in companies that are deemed to have positive sustainability potential while avoiding exposure to companies that have known ESG-related controversies or business models deemed to have adverse sustainability potential as defined by the Exclusions outlined herein.

Endnotes

1. Analysis based on 75 private companies. Excludes Petsmart / Chewy from the analysis as value is predominantly impacted by the public value of Chewy. Data represents 83% of direct equity investment fair value and excludes public companies, equity invested alongside healthcare credits, financial services companies valued on a multiple of book value or other income metrics, E&P companies valued on acreage or reserves and escrow value (ie companies valued on metrics other than EBITDA). Revenue and EBITDA of companies denominated in foreign currency are converted to US Dollars at the daily average US Dollar exchange rate for the 12 months from 30/9/20 through 30/9/19 and prior period. Portfolio company operating metrics are based on the most recently available (unaudited) financial information for each company. Where necessary, estimates were used, which include pro forma adjusted EBITDA and revenue, annualised quarterly operating metrics and LTM periods as of 30/9/20 and 30/6/20. LTM Revenue and LTM EBITDA growth statistics based on NBPE's ownership of these metrics on an underlying basis and includes the impact of acquisitions. Enterprise value multiples and net debt multiples weighted by fair value; when enterprise value is based on revenue, DCF, forward multiples or metrics other than LTM EBITDA, these multiples have been excluded from the portfolio calculation and weighted fair value.
