

PRESS RELEASE

## **Wolters Kluwer releases new service pack for Enablon Vision Platform**

**Amsterdam – January 18, 2024** – Wolters Kluwer today launched its first [Enablon Vision Platform](#) enhancements of 2024, bringing enhanced ease-of-use, analytics and data visualization capabilities to operations, environmental, and safety teams, worldwide.

The Enablon Vision Platform helps users lay the foundation for integrated risk management, by integrating, automating, and streamlining governance, risk, compliance, health and safety, environment and sustainability, business continuity, and internal audit practices across the organization. The platform provides a single source of truth for integrated risk management, and empowers users and executives to make better, more informed decisions. From supporting field staff in achieving an incident-free work environment, to simplifying environmental data collection, industry-leading enterprises use the platform to harmonize their risk approach and drive continuous improvement – from the plant floor to the executive suite.

**Notable additions included in the Enablon Vision Platform Version 9 2023 SP3 release include:**

- The ability for Enablon early adopters to access **Open Insights, a new analytics functionality which visualizes EHS, ESG and integrated risk data across sites**, to empower users to make impactful changes and improve on-site safety performance. Users can also now track and perform baseline analyses of Scope 1 and Scope 2 Greenhouse Gas (GHG) emissions; track site-specific performance against ESG key performance indicators; and facilitate ESG disclosures by sharing data seamlessly with the Enablon ESG Excellence solution. EHS managers can also now use near real-time insights to increase onsite performance with baseline analyses for risks across different sites; and track lagging and leading indicators including events, observations, and inspections.
- **Improved mobile functionality**, including simplified design and increased accessibility of the platform's Action Plan task interface; the ability for users to navigate away from the Enablon Go app while it performs background tasks; and the ability to submit safety events for review directly from the mobile app.
- **New Process Hazard Analysis** functionality, which helps process safety managers and front-line workers improve safety, reduce downtime, and protect the surrounding environment by identifying, digitalizing, and relationally visualizing a range of risks, from equipment failures to human factors.
- New features that enhance the user experience for **Control of Work** safety processes, including better categorized, full-page navigation on the desktop, tablet, and mobile device. Users can now also access granular details in isolation certificates, and benefit from enhanced usability of start work checklists and shift management features.

- New features that enhance **Environmental, Health, Safety and Quality (EHSQ)** processes, including the ability to connect root cause analyses to action plans; the ability to add new or link to existing best practices directly from a specific incident; new functionality that enhances the accuracy and efficiency of sharing chemicals management data; and new features for Shift Management (formerly Field Operations) that increase usability, role management and viewing options.

**Rob Davis, Vice President of Product Management, Wolters Kluwer Enablon, said:**

“These newest enhancements for the Enablon Vision Platform are the direct result of our commitment to actively seeking, and quickly responding to, customer insights and user feedback. At Enablon, we know that deeply understanding our customers, their working environments, and the challenges they face day-to-day, all play an essential role in our ability to ensure that our single, cohesive, and user-friendly platform remains the best integrated risk solution on the market.”

Enablon, part of [Wolters Kluwer’s Corporate Performance & ESG \(CP & ESG\) division](#), is the world’s leading provider of integrated software solutions for EHS, Environmental, Social, and Governance (ESG), Operational Excellence, and Governance, Risk and Compliance (GRC). The division helps create a better world by making organizations responsible, productive, and safe through innovative technology. Hundreds of industry-leading enterprises and millions of users, worldwide, rely on Enablon solutions to minimize risks, increase worker safety, prevent incidents from happening, achieve regulatory compliance, and reduce environmental impact.
