MEDIA & INVESTOR RELEASE

Novartis data at ASCO and EHA showcase latest oncology research and innovation, including in breast and prostate cancer

• Latest in HR+/HER2- metastatic breast cancer, including data on CDK recycling with Kisqali® plus endocrine therapy, further MONALEESA-2 quality of life and overall survival analyses, and a new biomarker analysis of Piqray® plus fulvestrant

• Data for Tafinlar® + Mekinist® in pediatric patients with BRAF V600 low-grade glioma to be featured in ASCO official press briefing

• First release of 96-week data on Scemblix® in Ph+ CML in chronic phase patients previously treated with ≥2 prior tyrosine kinase inhibitors

• Updated next-generation CAR-T T-Charge™ data, and five-year results from ELIANA trial in pediatric and young adult ALL treated with Kymriah®, the first ever CAR-T cell therapy approved

• Data from nearly 130 abstracts from Novartis-sponsored and investigator-initiated trials demonstrates Novartis commitment to push the boundaries of science and harness the power of innovation in established and investigational therapies and novel combinations

Basel, May 12, 2022 — Novartis highlights data from across its oncology portfolio at the upcoming 2022 American Society of Clinical Oncology (ASCO) Annual Meeting and the European Hematology Association (EHA) 2022 Hybrid Congress. With nearly 130 abstracts from Novartis-sponsored and investigator-initiated trials accepted, the data showcase research across over 20 compounds in key disease areas, including breast, lung and prostate cancers, leukemia, lymphoma, multiple myeloma and other blood disorders.

“We continue to push the boundaries of science with advanced therapies and novel combinations to help address the individual needs of patients,” said Marie-France Tschudin, President, Innovative Medicines International and Chief Commercial Officer, Novartis. “We are particularly excited about the latest data on CDK recycling with Kisqali, and first results for Tafinlar + Mekinist in a rare pediatric brain cancer.”

Key highlights of data accepted by ASCO:

**Disclaimer**

This press release contains forward-looking statements within the meaning of the United States Private Securities Litigation Reform Act of 1995. Forward-looking statements can generally be identified by words such as “potential,” “can,” “will,” “plan,” “may,” “could,” “would,” “expect,” “anticipate,” “seek,” “look forward,” “believe,” “committed,” “investigational,” “pipeline,” “launch,” or similar terms, or by express or implied discussions regarding potential marketing approvals, new indications or labeling for the investigational or approved products described in this press release, or regarding potential future revenues from such products. You should not place undue reliance on these statements. Such forward-looking statements are based on our current beliefs and expectations regarding future events, and are subject to significant known and unknown risks and uncertainties. Should one or more of these risks or uncertainties materialize, or should underlying assumptions prove incorrect, actual results may vary materially from those set forth in the forward-looking statements. There can be no guarantee that the investigational or approved products described in this press release will be submitted or approved for sale or for any additional indications or labeling in any market, or at any particular time. Nor can there be any guarantee that such products will be commercially successful in the future. In particular, our expectations regarding such products could be affected by, among other things, the uncertainties inherent in research and development, including clinical trial results and additional analysis of existing clinical data; regulatory actions or delays or government regulation generally; global trends toward health care cost containment, including government, payor and general public pricing and reimbursement pressures and requirements for increased pricing transparency; our ability to obtain or maintain proprietary intellectual property protection; the particular prescribing preferences of physicians and patients; general political, economic and business conditions, including the effects of and efforts to mitigate pandemic diseases such as COVID-19; safety, quality, data integrity or manufacturing issues; potential or actual data security and data privacy breaches, or disruptions of our information technology systems, and other risks and factors referred to in Novartis AG’s current Form 20-F on file with the US Securities and Exchange Commission. Novartis is providing the information in this press release as of this date and does not undertake any obligation to update any forward-looking statements contained in this press release as a result of new information, future events or otherwise.

**About Novartis**

Novartis is reimagining medicine to improve and extend people’s lives. As a leading global medicines company, we use innovative science and digital technologies to create transformative treatments in areas of great medical need. In our quest to find new medicines, we consistently rank among the world’s top companies investing in research and development. Novartis products reach nearly 800 million people globally and we are finding innovative ways to expand access to our latest treatments. About 108,000 people of more than 140 nationalities work at Novartis around the world. Find out more at
