## MINERAL RESERVES

QUALIFIED PERSON	POSITION	PROPERTY/DEPOSIT

1. The mineral resources and reserves have been estimated and reported in accordance with Canadian National Instrument 43-101, 'Standards of Disclosure for Mineral Projects' and the Definition Standards adopted by CIM Council in May 10, 2014.
2. Mineral resources that are not mineral reserves have not demonstrated economic viability at the Reserve gold price stated.
3. All mineral resources are reported inclusive of mineral reserves.
4. Tonnages are rounded to the nearest 100,000 tonnes; gold grades are rounded to one decimal place; ounces are rounded to the nearest 1,000oz. Rounding may result in apparent differences between tonnes, grade and contained metal.
5. Tonnes and grade measurements are in metric units; contained gold is in troy ounces.
6. Processing recoveries vary at each pit by many factors including material types, mineralogy and chemistry of the ore. The overall average recoveries are around 89% at Sabodala, 90% at Houndé, 85% at Ity, 94% at Boungou, 88% at Mana and 92% at Wahgnion. The average processing recoveries at the development project's Lafigué and Kalana are 95% and 90% respectively.
7. A mining permit application was submitted for the Golden Hill property, but the Company subsequently requested a withdrawal of that application in order to submit an exploration permit application. The prior exploration permit has expired. The Company has received confirmation from the Ministry of Mines on March 4, 2022 stating that they have received the Company's request.
8. The reporting of mineral reserves and resources are based on a gold price as detailed below:
