

Bavarian Nordic Signs Distribution Agreement with Eurofarma to Expand Access to Chikungunya Vaccine in Brazil

- Agreement to enable the first entry in Latin America for Bavarian Nordic's chikungunya vaccine
- Potential to expand agreement to cover rest of Latin America

COPENHAGEN, Denmark, January 23, 2026 - Bavarian Nordic A/S (OMX: BAVA) today announced an agreement with Eurofarma, granting them exclusive rights to sell and distribute Bavarian Nordic's chikungunya vaccine, CHIKV VLP, in Brazil. Eurofarma is also granted the right of first refusal for any future opportunity to register and commercialize the chikungunya vaccine in the rest of Latin America.

The agreement is transfer price and royalty-based with no associated upfront or milestone payments. Eurofarma will be responsible for seeking and maintaining regulatory approval of the vaccine in exclusive territories, as well as sales and distribution costs. Bavarian Nordic will remain the manufacturer of the vaccine, which is made available to Eurofarma through a transfer price agreement.

Pending discussions with the Brazilian Health Regulatory Agency, Anvisa, regulatory submission is expected to occur later in the first half of 2026, potentially supporting launch of the chikungunya vaccine in Brazil in the second half of 2027.

“Following a successful launch of our chikungunya vaccine for travelers in the first Western markets in 2025, we are pleased to expand the commercial availability also for endemic populations through this first distribution agreement,” said Paul Chaplin, President & CEO of Bavarian Nordic. “Brazil remains severely impacted by chikungunya, representing half of all reported cases and related deaths worldwide. Together with Eurofarma, a local partner with strong regional presence, we continue our efforts to make a lasting impact on public health globally.”

“Our partnership with Bavarian Nordic reinforces Eurofarma’s commitment to innovation and to expanding access to high-quality healthcare. It builds on our strong capabilities to deliver high-impact solutions for people in Brazil and across Latin America—so that everyone has the opportunity to live longer and better,” says João Siffert, Eurofarma’s Vice President of Innovation.

While the agreement aims to significantly improve access to chikungunya vaccines in Brazil, it is not expected to have a material short- to medium-term financial impact on Bavarian Nordic.

About CHIKV VLP

CHIKV VLP is a single dose, prefilled, adjuvanted VLP recombinant protein vaccine for active immunization for the prevention of disease caused by chikungunya virus (CHIKV) in individuals 12 years and older. It is designed to induce a robust seroresponse, with protective immunity starting to develop as early as 1 week after vaccination.

The vaccine does not contain viral genetic material and is therefore non-infectious and unable to cause disease, ensuring a broad range of people can benefit from vaccination.

The vaccine was approved by the U.S. Food and Drug Administration (FDA) and the European Commission in February 2025 and the United Kingdom in May 2025 under the trade name VIMKUNYA®¹.

About chikungunya

Chikungunya is a mosquito-borne disease caused by the chikungunya virus. In the past 20 years, the virus has emerged across several regions in Asia, Africa, and the Americas, including many popular travel destinations, often causing large unpredictable outbreaks. Since its discovery, chikungunya has been identified in more than 110 countries². Chikungunya typically presents with acute symptoms, including fever, rash, fatigue, headache, and often severe and incapacitating joint pain. Most patients recover, but 30-40% of those affected may develop chronic symptoms that can last for months or even years³. In 2025, as of December, nearly 500,000 cases of chikungunya and over 200 associated deaths were reported worldwide⁴. More than half of the reported cases and associated deaths were reported from Brazil⁵. Recent data suggest that chikungunya is severely underreported and often misdiagnosed as dengue fever due to a similar symptom profile⁶.

About Bavarian Nordic

Bavarian Nordic is a global vaccine company with a mission to improve health and save lives through innovative vaccines. We are a preferred supplier of mpox and smallpox vaccines to governments to enhance public health preparedness and have a leading portfolio of travel vaccines.
