Ascom Myco 3, the smartphone designed and developed by workflow technology innovator, Ascom, is now validated by Google as an Android Enterprise Recommended ruggedized device.

The Android Enterprise Recommended program defines best practices and common requirements for devices and services, backed by a thorough testing process conducted by Google. The program ensures that Myco 3 meets an elevated set of specifications for hardware, bulk deployment, security updates, and user experience. This certification demonstrates that Myco 3 is built for demanding work environments and meets the specific needs of professional users.

Jeannine Pilloud, Ascom CEO says: "We are delighted to gain this certification from Google. Myco 3 is the latest smart device in our long history of developing best-in-class communication systems. We've had some fantastic feedback from customers – in both Healthcare and Enterprise markets – about usability and functionality, and this certification demonstrates our continued commitment to meeting their needs now and in the future."

Myco 3 comes with important functionality, including personal alarms to improve workplace safety, hot-swappable batteries to enable 24/7 use and, unlike many other devices, can be disinfected to support infection control and cleanliness.

Android Enterprise Recommended is a Google-led program for enterprise devices and services. The program established best practices and common requirements, backed by rigorous testing so you can confidently deploy Android throughout your organization, with confidence.
