## Key Rating Drivers

**Strong Structural; Weak External:** Iceland has a very high income per capita and outperforms its peers on governance, human development and doing business metrics. These strengths are set against the small size of the economy and limited export diversification, resulting in vulnerability to external shocks and macroeconomic and financial volatility.

**Cyclical Growth Slowdown Under Way:** Real GDP growth is slowing from a cyclical high of 6.6% in 2016 as the overheated tourism sector cools. We forecast growth to fall to 0.0% in 2019 as a result of short-term shocks in tourism and fisheries, but to recover to 2.5% in 2020 and to average 2.0% in the medium term.

**Temporary Shocks Exacerbate Slowdown:** The troubled budget airline Wow Air's collapse in March 2019, the grounding of IcelandAir's Boeing 737 Max jets, and the absence of capelin in Iceland's waters have adversely affected tourism and the volatile pelagic fishing sector in Iceland. Growing tourism consumption should partly compensate for lower arrivals in 2H19.

**Labour Market Tensions Eased:** Wow Air's collapse precipitated a private sector wage agreement amounting to average salary increases of 3.6% per year for the next four years. This round of talks had been more acrimonious than previous rounds, with increased strikes. National wage growth should be contained at 4.5% yoy in 2019 and 2020, limiting upward pressure on inflation and further loss of competitiveness.

**Improved But Weak External:** Net external debt has fallen rapidly to 24% of GDP at end-2018, but remains above the current 'A' median of 16%. Iceland has high dependence on commodity exports and lacks diversification in its export base, which makes the economy vulnerable to terms of trade shocks and the krona sensitive to capital flows.

**Fiscal Surpluses Reducing Debt:** Fitch Ratings forecasts the general government surplus to narrow to 0.6% of GDP in 2019 (2018: 1.1%), before improving slightly to 0.8% in 2020. This compares favourably to a budget deficit of 1.4% of GDP for the current 'A' median. Public debt has dropped to 36% of GDP, slightly below the 'A' and 'AA' medians.

**High Income, Strong Policy-making:** Iceland has a very high income per capita, estimated at USD70,332 in 2019, aligning it more with the 'AAA' median of USD60,953. Performance on measures of governance, human development and ease of doing business are also more in line with 'AAA' and 'AA' rated countries. Broad political consensus among political parties on economic and fiscal policies has underpinned the rebuilding of fiscal and external buffers.

## Rating Sensitivities

**Public Debt Reduction:** A sustained fall in the public debt ratio, supported by prudent fiscal policy could result in a positive rating action.

**External Finance Resilience:** Sustained improvement in the external balance sheet and increased resilience of the economy to external shocks would be positive for Iceland's ratings. Conversely, excessive capital outflows jeopardising financial stability and weakening external buffers would be negative for the ratings.

**Growth Shock Affecting Banks:** A sustained and sharper-than-expected economic downturn affecting the banking sector (eg through the real estate market) could weigh on the ratings.

## Rating Factors

### Summary: Strengths and Weaknesses

Rating factor	Macroeconomic	Public finances	External finances	Structural issues
Status	Weakness	Neutral	Weakness	Strength
Trend	Stable	Positive	Stable	Stable

Note: Relative to 'A' category  
Source: Fitch Ratings

### Strengths

- Iceland ranks much higher on the World Bank Governance Indicators, Human Development Index, and Ease of Doing Business indicators relative to the medians.
- GDP and income per capita are significantly higher than the 'A' and 'AA' medians.
- Gross general government debt/GDP at 35.7% in 2019 is slightly lower than the medians and should fall further. This is driven by a general government fiscal surplus forecast to average 0.7% of GDP, significantly better than the medians.
- Five-year average real GDP growth is consistent with 'A' rated peers, while five-year average HICP inflation is lower. The unemployment rate is at a low 3.3%.
- Fitch forecasts FX reserves to be robust at 6.1 months of current external payments at end-2019.

### Weaknesses

- The small economy has high commodity export dependence (37.6% of current external receipts against the 'A' median of 11.4%). The lack of diversification in Iceland's export base makes it vulnerable to terms-of-trade shocks.
- Volatility of real GDP growth, inflation and the REER are higher than the medians.
- Gross and net external debt metrics are still higher than the medians despite rapid reduction in external debt.
- Iceland's public debt interest payments and the share of public debt maturing in a year are higher than the 'A' median.

### Local-Currency Rating

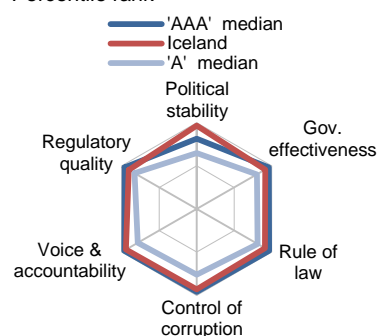

Iceland's credit profile does not support uplifts of the Long-Term Local-Currency IDR above the Long-Term Foreign-Currency IDR. In Fitch's view, neither of the two key factors supporting upward notching of the Long-Term Local-Currency IDR cited in the criteria are present: strong public finance fundamentals relative to external finance fundamentals; and previous preferential treatment of local-currency creditors relative to foreign-currency creditors.

### Country Ceiling

Fitch lifted Iceland's Country Ceiling to 'A+' at the May 2019 rating review, one notch above Iceland's Long-Term Foreign-Currency IDR. This reflects the track record of liberalisation of capital controls since 2016. In March 2019, the remaining offshore krona assets that were restricted from conversion into foreign currency assets at market rates were released.

## Key Credit Developments

### Tourism and Fisheries Shock Hits 2019 Growth

Fitch revised down real GDP growth in 2018 to 4.6%, from 4.9% at the time of its December 2018 review. Growth was fairly broad, driven especially by strong private consumption supported by low unemployment, robust wage growth and a robust but weakening tourism sector.

We forecast real GDP to be unchanged in 2019, a downward revision from 3.0% growth at the time of our December 2019 review as a result of short-term shocks in tourism and fisheries. We expect investments to contract sharply as sentiment is weighed down by the shock in the tourism sector, while net exports contract by a lesser amount. Private consumption should slow but continue to contribute positively to growth in Iceland as general pessimism from labour tensions fades. The economy should recover from the short-term shocks by 2H19, and we forecast real GDP growth to bounce back to 2.5% in 2020.

### WowAir Collapse, Boeing Jets Grounded, Capelin Failure

The troubled budget airline WowAir's collapse in March 2019 accelerated the slow down in the tourism sector and is causing a contraction in tourism capacity. This was compounded by the grounding of IcelandAir's Boeing 737 MAX jets (roughly a quarter of its fleet). Foreign tourists through Keflavik Airport in the year to June 2019 decreased by 12% yoy, and the airport management authority forecasts a 17% contraction of passenger arrivals for the whole year in 2019. This is notwithstanding increased flights by other airlines to respond to the shock.

Industry participants expect air passenger capacity in Iceland to be partly restored by the peak tourist season in summer 2019 as replacement IcelandAir aircraft and expanded operations at other airlines are brought in to cover the shortfall. We also expect the near-term shock in tourism to weigh on the Icelandic housing market, where prices rose rapidly in tandem with the boom in tourism.

The volatile pelagic fishing industry also suffered a shock in the first few months of 2019, with the disappearance of capelin from Icelandic waters. Capelin exports accounted for 0.5% of GDP in 2018, but the loss should be partly offset by growing fish farming industry exports, which could become an established sector with a more stable source of export income.

### Wage Negotiation Tensions Mostly Resolved

The collapse of WowAir precipitated the conclusion of the key private sector wage negotiations, which have been more acrimonious than in recent rounds. The rise of dynamic new far-left trade union leaders led to a pick-up in tourism and transport sector strikes that sought to advance the interests of the growing number of low-paid foreign workers.

The outcome of the wage round was relatively moderate, amounting to average increases of 3.6% a year over the next four years. They are denominated in krona and benefit lower-paid workers in a progressive way. A link between further wage increases and faster GDP per capita growth was also included, which could result in faster wage growth towards the end of the four-year agreement, but prevents unit labour costs from outpacing productivity.

Public sector negotiations are still ongoing, and Fitch expects moderate wage rises in line with the outcomes in the private sector. Fitch expects national average wages to grow by roughly 4.5% yoy in 2019 and 2020, resulting in a small growth in real wages.

The unemployment rate rose to 4.7% in May 2019, reflecting near-term growth shocks. Fitch forecasts the unemployment rate to average 3.3% in 2019 and 3.5% in 2020 as the near-term growth shocks subside but labour-intensive tourism activity continues to moderate.

### Energy and Services Prices Driving Inflation

### Public Debt Low Relative to 'A' Category Peers

### Build-up of Government Assets to Stabilise Debt

### House Price Growth Has Tracked Tourism with a Lag

### Monetary Policy Rate to Fall As Inflation Softens

HICP inflation picked up to 2.2% yoy in June 2019, driven by slightly weaker krona, higher energy prices and air travel fares. Fitch forecasts inflation to ease for the rest of the year, averaging 1.5% for 2019 as energy inflation fades and as demand in the economy softens, but to continue being supported by a weak krona. With a softening inflation and growth outlook, The Central Bank of Iceland (CBI) lowered rates by 75bp in June-July 2019, and Fitch expects that it could lower rates slightly further in 2H19.

### Offshore Krona Assets Restrictions Lifted, Krona Rate Stable

The capital controls imposed during the Icelandic banking crisis were further liberalised in April 2019, with only restrictions on foreign-currency investments in derivative instruments not for hedging remaining. In March 2019, 3.2% of GDP in legacy offshore krona assets that were restricted from being converted into foreign currency assets at market rates have also been liberalised.

In March 2019 the CBI lowered its capital flow management tool, the special reserve requirement (SRR) ratio, which stipulates the percentage of nominal investments in fixed-income instruments required to be held in a non-interest bearing account at the central bank, to 0% from 20% in March 2019. The liberalisation measures and the central bank's interventions in the FX market supported the krona at a time when negative news in the tourism sector could have led to further capital outflows. This dampened the impact of Wow Air's collapse at end-March on the krona, which fell by just 1.8% between end-February and end-April.

### Fitch Expects Fiscal Surplus Narrowing to Counter Growth Shock

Fitch forecasts the general government surplus to narrow to 0.6% of GDP in 2019 from 1.1% in 2018, before improving slightly to 0.8% in 2020. This includes our expectation that automatic stabilisers would be allowed to respond to the short-term economic shock and following the collapse of Wow Air and the failure of the capelin fishing catch in 1Q19.

In June 2019 the government published a revised fiscal policy statement revising the target central government balance for 2019 from 1% of GDP to -0.4% of GDP for 2019-2020, improving to -0.3% in 2021 and 0.0% in 2022. These revisions were made to offset the poorer growth outlook and are consistent with the fiscal rules without need for a temporary suspension permissible within the Public Finance Act.

### Banks Resilient to WowAir But Face Higher Real Estate Risks

We expect the direct impact of Wow Air's collapse on Icelandic banks to be muted, with an estimated ISK1.2 billion in write-offs accruing to Wow Air (0.03% of 2018 banking system assets) and a moderate 9% of the loan portfolio directly related to the tourism industry. The wider impact could affect the banks if the tourism shock leads to a sharp contraction in the housing market.

We expect the private rental accommodation sector to be hit by the contraction in tourism in 2019, which could be exacerbated by a simultaneous rise in supply as many hotels and homes are likely to be completed in the coming years.

House price growth across Iceland has been slowing since its peak of 24.2% yoy in July 2017, but remains robust at 3.5% yoy in July 2019. House prices in the capital especially have slowed to 2.4% yoy in July 2019, while the slowdown is lagging in the rest of Iceland, with house prices still growing at 4.9% yoy.

Icelandic banks are highly capitalised, with a combined capital adequacy ratio of 23.2% in 2018, notwithstanding a fall of 1.9pp in 2018 primarily due to dividend payments. This comfortably exceeds the financial supervisor's total required capital base for the domestic systemically important banks of 19.6%-21.3%. Non-performing loans are low at 2.2% at end-2018 (2017: 2.7%), but likely to rise slightly in the coming quarters due to the tourism shock.

## House Price Growth Slowing Fast

Source: Fitch Ratings, Statistics Iceland

Credit growth at domestic commercial banks has not responded to the tourism shock, with both households and commercial credit at commercial banks growing robustly at 10.1% yoy and 10.6% yoy in May 2019. The rapid growth in credit for both households and corporates reflects a recovery after years of deleveraging, especially among households, since Iceland's banking crisis. Borrowing from banks has been falling, while households and corporates have been increasing their borrowings from the pension funds. Household debt is almost entirely denominated in krona, while corporates hold 28% of foreign currency debt (of which 76% is in euros). Banks' policy to restrict corporate FX lending to corporates with matching FX income mitigates foreign currency risk for the corporate credit market.

## Households and Corporate Credit Catch up from Deleveraging

Source: Fitch Ratings, Central Bank of Iceland

Fitch uses stylised projections for a sovereign's gross general government debt/GDP ratio to illustrate the sustainability of its debt burden and its sensitivity to economic growth, the cost of borrowing, fiscal policy and the exchange rate.

## Public Debt Dynamics

Fitch forecasts GGGD to fall further to 35.7% of GDP in 2019 from 37.7% in 2018, and to stabilise at around 30% of GDP by 2021. Falling government debt/GDP will limit the government's ability to further lengthen the average maturity of the debt portfolio to maintain liquidity in the secondary market. Positive general government net lending is likely to be channelled to the sovereign wealth fund, resulting in a stable GGGD/GDP ratio. Average yields on government bonds have fallen to historical lows due to favourable global liquidity conditions and the further liberalisation of capital controls and the SRR.

### Debt Dynamics: Fitch's Baseline Assumptions

	2018	2019	2020	2021	2022	2023	2028
Gross general government debt (% GDP)	37.7	35.7	32.7	30.2	30.2	30.1	29.0

FITCH'S CODE OF CONDUCT, CONFIDENTIALITY, CONFLICTS OF INTEREST, AFFILIATE FIREWALL, COMPLIANCE, AND OTHER RELEVANT POLICIES AND PROCEDURES ARE ALSO AVAILABLE FROM THE CODE OF CONDUCT SECTION OF THIS SITE. FITCH MAY HAVE PROVIDED ANOTHER PERMISSIBLE SERVICE TO THE RATED ENTITY OR ITS RELATED THIRD PARTIES. DETAILS OF THIS SERVICE FOR RATINGS FOR WHICH THE LEAD ANALYST IS BASED IN AN EU-REGISTERED ENTITY CAN BE FOUND ON THE ENTITY SUMMARY PAGE FOR THIS ISSUER ON THE FITCH WEBSITE.

Copyright © 2019 by Fitch Ratings, Inc., Fitch Ratings Ltd. and its subsidiaries. 33 Whitehall Street, NY, NY 10004. Telephone: 1-800-753-4824, (212) 908-0500. Fax: (212) 480-4435. Reproduction or retransmission in whole or in part is prohibited except by permission. All rights reserved. In issuing and maintaining its ratings and in making other reports (including forecast information), Fitch relies on factual information it receives from issuers and underwriters and from other sources Fitch believes to be credible. Fitch conducts a reasonable investigation of the factual information relied upon by it in accordance with its ratings methodology, and obtains reasonable verification of that information from independent sources, to the extent such sources are available for a given security or in a given jurisdiction. The manner of Fitch's factual investigation and the scope of the third-party verification it obtains will vary depending on the nature of the rated security and its issuer, the requirements and practices in the jurisdiction in which the rated security is offered and sold and/or the issuer is located, the availability and nature of relevant public information, access to the management of the issuer and its advisers, the availability of pre-existing third-party verifications such as audit reports, agreed-upon procedures letters, appraisals, actuarial reports, engineering reports, legal opinions and other reports provided by third parties, the availability of independent and competent third-party verification sources with respect to the particular security or in the particular jurisdiction of the issuer, and a variety of other factors. Users of Fitch's ratings and reports should understand that neither an enhanced factual investigation nor any third-party verification can ensure that all of the information Fitch relies on in connection with a rating or a report will be accurate and complete. Ultimately, the issuer and its advisers are responsible for the accuracy of the information they provide to Fitch and to the market in offering documents and other reports. In issuing its ratings and its reports, Fitch must rely on the work of experts, including independent auditors with respect to financial statements and attorneys with respect to legal and tax matters. Further, ratings and forecasts of financial and other information are inherently forward-looking and embody assumptions and predictions about future events that by their nature cannot be verified as facts. As a result, despite any verification of current facts, ratings and forecasts can be affected by future events or conditions that were not anticipated at the time a rating or forecast was issued or affirmed.

The information in this report is provided "as is" without any representation or warranty of any kind, and Fitch does not represent or warrant that the report or any of its contents will meet any of the requirements of a recipient of the report. A Fitch rating is an opinion as to the creditworthiness of a security. This opinion and reports made by Fitch are based on established criteria and methodologies that Fitch is continuously evaluating and updating. Therefore, ratings and reports are the collective work product of Fitch and no individual, or group of individuals, is solely responsible for a rating or a report. The rating does not address the risk of loss due to risks other than credit risk, unless such risk is specifically mentioned. Fitch is not engaged in the offer or sale of any security. All Fitch reports have shared authorship. Individuals identified in a Fitch report were involved in, but are not solely responsible for, the opinions stated therein. The individuals are named for contact purposes only. A report providing a Fitch rating is neither a prospectus nor a substitute for the information assembled, verified and presented to investors by the issuer and its agents in connection with the sale of the securities. Ratings may be changed or withdrawn at any time for any reason in the sole discretion of Fitch. Fitch does not provide investment advice of any sort. Ratings are not a recommendation to buy, sell, or hold any security. Ratings do not comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of payments made in respect to any security. Fitch receives fees from issuers, insurers, guarantors, other obligors, and underwriters for rating securities. Such fees generally vary from US\$1,000 to US\$750,000 (or the applicable currency equivalent) per issue. In certain cases, Fitch will rate all or a number of issues issued by a particular issuer, or insured or guaranteed by a particular insurer or guarantor, for a single annual fee. Such fees are expected to vary from US\$10,000 to US\$1,500,000 (or the applicable currency equivalent). The assignment, publication, or dissemination of a rating by Fitch shall not constitute a consent by Fitch to use its name as an expert in connection with any registration statement filed under the United States securities laws, the Financial Services and Markets Act of 2000 of the United Kingdom, or the securities laws of any particular jurisdiction. Due to the relative efficiency of electronic publishing and distribution, Fitch research may be available to electronic subscribers up to three days earlier than to print subscribers.

For Australia, New Zealand, Taiwan and South Korea only: Fitch Australia Pty Ltd holds an Australian financial services license (AFS license no. 337123) which authorizes it to provide credit ratings to wholesale clients only. Credit ratings information published by Fitch is not intended to be used by persons who are retail clients within the meaning of the Corporations Act 2001.
