

Sequana Medical Notice of 2021 Full Year Results and Business Update

Ghent, Belgium – 31 March 2022 – Sequana Medical NV (Euronext Brussels: SEQUA) (the "Company" or "Sequana Medical"), an innovator in the treatment of diuretic-resistant fluid overload in liver disease, malignant ascites and heart failure, will announce its full year results ended 31 December 2021 on Tuesday, 12 April 2022.

The management team will host a conference call with live webcast at 03:00 pm CET / 09:00 am EST on the day of the results.

The webcast can be accessed by registering via the [investors eventpage](#) of the Sequana Medical website or by clicking [here](#). To participate in the Q&A, please click [here](#) to register. Once registered, you will receive dial-in numbers and a confirmation code. The webcast and conference call will be conducted in English and a replay will be available on the Company's [website](#) shortly thereafter.

About Sequana Medical

Sequana Medical is a commercial stage medical device company utilizing its proprietary **alfapump**[®] and DSR[®] (Direct Sodium Removal) technologies to develop innovative treatments for fluid overload in liver disease, malignant ascites and heart failure where diuretics are no longer effective. Fluid overload is a frequent complication of many large diseases – including advanced liver disease driven by NASH (non-alcoholic steatohepatitis)-related cirrhosis and heart failure – with diuretic resistance being widespread. The U.S. market for the **alfapump** resulting from NASH-related cirrhosis is forecast to exceed €3 billion annually within the next 10-20 years. The heart failure market for DSR and the **alfapump** DSR[®] is estimated to be over €5 billion annually in the U.S. and EU5 by 2026.

The **alfapump** is Sequana Medical's unique, fully implanted wireless device that automatically pumps fluid from the abdominal cavity into the bladder, where it is naturally eliminated through urination. DSR is Sequana Medical's proprietary approach to managing sodium and fluid overload through use of a sodium-free infusate administered into the abdominal cavity.

In the U.S., the Company's key growth market, the **alfapump** has been granted breakthrough device designation by the FDA for recurrent or refractory ascites due to liver cirrhosis. Interim data from the ongoing North American pivotal study (POSEIDON) showed positive outcomes against all primary endpoints and a rapid and persistent clinically important improvement in quality of life. All patients have been enrolled in the study and primary endpoint reporting is planned for Q4 2022. This study is

intended to support a future marketing application of the **alfapump** in the U.S. and Canada. In Europe, the **alfapump** is CE-marked for the management of refractory ascites due to liver cirrhosis and malignant ascites and is included in key clinical practice guidelines. Over 900 **alfapump** systems have been implanted to date.

Sequana Medical has combined its proven **alfapump** and proprietary DSR therapy, and is developing the **alfapump** DSR, a breakthrough approach to fluid overload due to heart failure. RED DESERT demonstrated that repeated DSR therapy in diuretic-resistant heart failure patients is able to manage their fluid and sodium balance, improve their cardio-renal status and restore their diuretic response for months post-treatment. Interim results from the ongoing SAHARA DESERT study in decompensated heart failure patients indicated that repeated DSR therapy can safely, effectively and rapidly eliminate persistent congestion and restore euvoemia, together with considerable benefit in cardio-renal status and a dramatic improvement in diuretic responsiveness. Reporting of top-line data is planned for H2 2022.

Sequana Medical is headquartered in Ghent, Belgium. For further information, please visit www.sequanamedical.com.

Important Regulatory Disclaimers

*The **alfapump**[®] system is not currently approved in the United States or Canada. In the United States and Canada, the **alfapump** system is currently under clinical investigation (POSEIDON Study) and is being studied in adult patients with refractory or recurrent ascites due to cirrhosis. For more information regarding the POSEIDON clinical study see www.poseidonstudy.com. The DSR[®] therapy is still in development and it should be noted that any statements regarding safety and efficacy arise from ongoing pre-clinical and clinical investigations which have yet to be completed. The DSR therapy is not currently approved for clinical research in the United States or Canada. There is no link between the DSR therapy and ongoing investigations with the **alfapump** system in Europe, the United States or Canada.*

Note: **alfapump**[®] is a registered trademark. DSR[®] is a registered trademark in Australia, the Benelux, the EU, United Kingdom, Hong Kong, Israel, Norway, and Switzerland. **alfapump** DSR[®] is a registered trademarks in Australia, the Benelux, China, the EU, United Kingdom, Hong Kong, Israel, New Zealand, and Norway.
