Purpose

As the world changes, we make it easier to be tryg^{a)}.

a) 'Tryg' means: feeling protected and cared for.

Great diversity of products

We offer a broad range of insurance products for private individuals as well as businesses.

Strong market position

Tryg is one of the largest non-life insurance companies in the Nordic region. We are the largest player in Denmark and the third-largest in Norway. In Sweden, we are the fifth-largest company in the market.

Attractive dividend policy

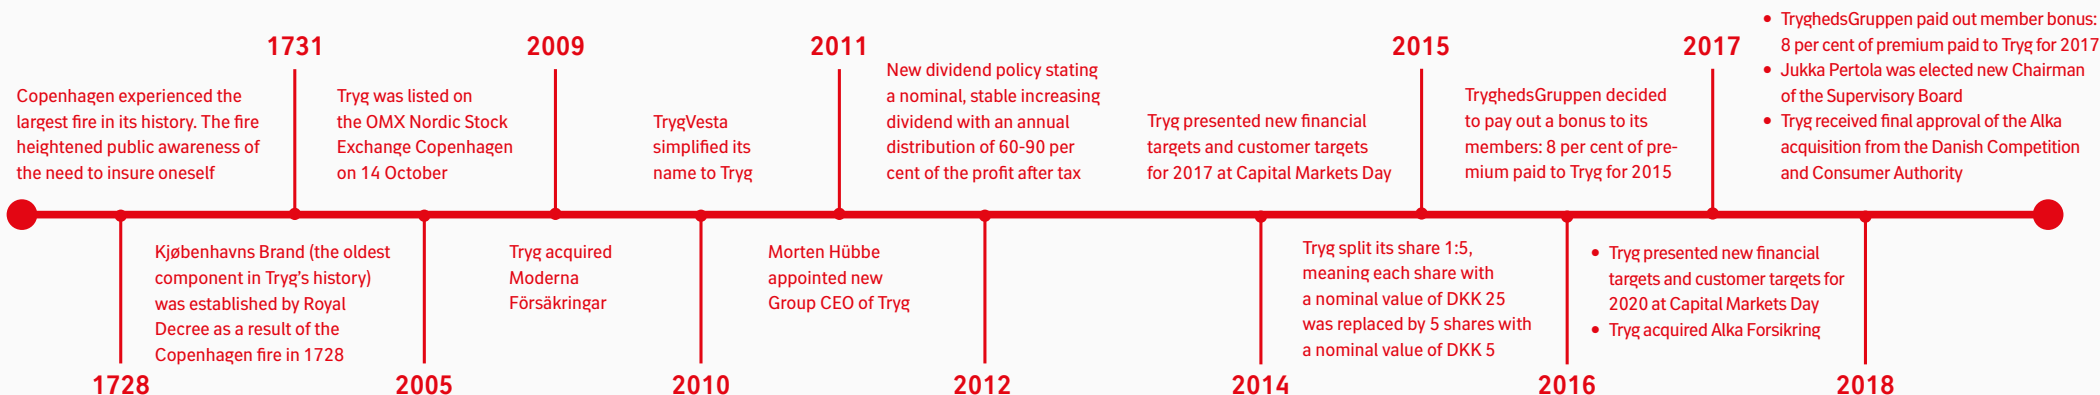

We aim to distribute a nominal, stable increase in dividend and to pay out 60-90% of our profit.

Trygheds-Gruppen

Owens 60% of Tryg and annually contributes around DKK 600m to projects that create peace of mind via TrygFonden.

4 million customers

Our 4,000 employees provide peace of mind for 4 million customers and handle approximately 1 million claims on a yearly basis.

Tryg received the final approval of the Alka acquisition from the Danish Competition and Consumer Authority in November 2018. The acquisition of Alka complements Tryg's position and distribution presence in the Danish private market, Tryg's core market segment.

More than 100 years of experience

In 1903, a group of trade union managers founded Arbejdernes Livsforsikring, which became Alka Forsikring in 1944. Alka has thus more than 100 years of experience of insurance in Denmark.

Alka is very strong on customer satisfaction with a score of 80.2 in the annual customer satisfaction survey. A company with a score above 75 holds a very strong position amongst its customers according to EPSI*.

* EPSI Rating is a model used for measuring customer satisfaction. Today, 12 European countries are using this model.

Tryg and Alka have the strongest brand awareness in Denmark

Improvements in all areas and approval of the Alka transaction

The year 2018 showed improvements in all important areas. Profitability improved, the number of customers increased, and customer loyalty and employee job satisfaction increased. We were also pleased that the acquisition of Alka was approved by the authorities in November 2018.

Excluding Alka one-offs and earnings, technical result for 2018 was DKK 2,826m driven by a combined ratio of 84.5%. The 2018 technical result, as reported, was DKK 2,766m which together with a negative investment return yielded a total profit of DKK 1,731m, corresponding to a return on equity of 14.9 per cent after tax.

First year with new targets and new purpose

At the capital markets day in November 2017, Tryg announced new financial targets and customer targets for the period up until 2020. The acquisition of Alka increased the technical result target from DKK 2,800m to DKK 3,300m.

In 2018, Tryg reported an improvement in the underlying claims level with progress in all areas. Earnings are still not satisfactory for Corporate, and efforts to improve profitability will continue in the coming years. Tryg saw a markedly improved level of customer loyalty – in terms of the degree of customer satisfaction (TNPS), which was 67, and an improved renewal rate for all areas. This also contributed to growth in premium income of 6.3%.

Tryg's new purpose "in a world of change, we make it easier to be 'tryg'" proved its worth and served as a general guide in 2018 – from daily customer contact to strategic decisions.

Dividend payments to shareholders

It is very important for Tryg that our shareholders should receive a nominal, stable increase in dividend. A total dividend per share of DKK 6.60 will be paid out for FY 2018 (DKK 6.40 in 2017) including a Q4 dividend per share of DKK 1.65.

Digitalisation and innovation

The insurance industry is confronted by rapid changes in recent years. To maintain a leading position in the future, Tryg focuses strongly on digitalisation and innovation. The development of digital solutions continues, and more than one third of claims are reported online, while online sales of insurance products have shown a substantial increase. The development of innovative automotive products continued in 2018, and we have now launched products where the driver's behaviour determines the insurance premium payable in all countries.

Claims management and prevention

Tryg continues to utilise its very large purchasing power, which will benefit both shareholders and customers. Prevention is very important, and it is integrated into our products, for example by an alarm in our contents product and through offering a rat blocker as part of the house insurance product.

Efficient distribution and new products

Efficient distribution is important to maintain a low expense ratio. In 2018, the development of online solutions as well as new distribution channels contributed to increasing efficiency. Tryg aims to increase revenue from new products and services. In 2018, we saw a significant increase in the number of products including surety and credit insurance, pet and child insurance policies.

Thanks to our employees

The good results and the many initiatives implemented in 2018 have only been made possible because of the Tryg employees. We are therefore very pleased to note increasing job satisfaction in 2018, up from 76 to 78, compared with 72 for Nordic finance companies as a whole. The Supervisory Board and the Executive Board would like to thank the employees for their great efforts.

Jukka Pertola
Chairman

Morten Højbe
Group CEO

Events in 2018

Q1

New member of Tryg's Executive Board

Johan Kirstein Brammer was appointed Chief Commercial Officer (CCO) and joined the Executive Board. Johan remained responsible for Tryg's Private business concurrently with undertaking his responsibilities as a member of Tryg's Executive Board up until the Alka acquisition was finally approved in November 2018.

Changes to the Supervisory board

At Tryg's annual general meeting, Deputy Chairman Jukka Pertola was appointed Chairman, succeeding TryghedsGruppen's Chairman Jørgen Huno Rasmussen.

Partner agreement with GoMore

Tryg entered into a partner agreement with GoMore, the largest sharing-economy platform for car sharing and ride sharing in the Nordics. GoMore is the 25th platform for which Tryg has tailored an insurance solution. Tryg is now the largest supplier of insurance solutions for sharing-economy solutions in the Nordics.

Claims track-and-trace feature

Private Denmark launched a claims track-and-trace feature, which means that customers are now able to follow the processing of claims online, which supports a positive claims experience.

Q2

Partner agreement with NITO

Tryg Norway entered into a partner agreement with the Norwegian Society of Engineers and Technologists (NITO). It is the largest partner agreement concluded by Tryg Norge for 17 years. NITO has almost 90,000 members.

Tryg acquires Troll Forsikring

Tryg acquired Troll Forsikring in Norway with a portfolio of NOK 120m and 12,000 private customers. Tryg expects the portfolio to gradually produce profitability in line with our Norwegian Private portfolio, and the acquisition will have a negligible impact on Tryg's solvency ratio.

TryghedsGruppen's member bonus

For the third year running, Tryg's majority shareholder TryghedsGruppen paid out a member bonus corresponding to 8% of the premiums paid to Tryg for 2017, equating to the payout of DKK 720m in total to TryghedsGruppen's members who are Tryg's Danish customers.

Q3

Sidekick

Tryg launched a new motor insurance solution in Norway, 'Sidekick'. A similar product in Denmark, 'Tryg Drive', was extended from young drivers to include all ages. Moderna in Sweden offers two similar products: 'Moderna Smart' and 'Moderna Smart Flex'. Tryg now offers motor insurance products where pricing is affected by driving behaviour in all the Nordic countries.

Tryg appoints new CFO

Tryg appointed a new CFO. Barbara Plucnar Jensen is a strong financial profile, who, in addition to her experience from ISS's UK and Irish markets, has solid experience within investments and treasury. She will be responsible for our continued strong financial management through the digital transformation, which is well advanced in the Tryg Group.

New house insurance

Private Denmark launched a new house insurance product, which includes a rat blocker. The rat blocker is another important claims prevention initiative from Tryg. The rat blocker prevents rats from entering private houses from the sewers and damaging houses, pipes etc.

Q4

New personal insurance

Private Denmark launched a new personal insurance product which combines accident, health, dental and sickness insurance under one insurance policy. This means that customers will be covered from top to toe. The new insurance is potentially relevant for up to 800,000 public employees who are not covered by company-paid health insurance plans.

'Tryg Tilbage' and 'Tryg Health'

Corporate Denmark launched a training programme app as part of the 'Tryg Tilbage' concept related to workers' compensation. The concept includes quick diagnosis, quick treatment and subsequent rehabilitation. Also, a new health prevention concept was launched, involving health screening and also an app, 'Tryg Health', giving customers a quick overview of all the services that they can access through 'Tryg Health'.

Strategic partnership with Danske Bank

As part of Tryg's 2020 strategy to strengthen the company's distribution, Tryg entered into a new Nordic partnership with Danske Bank. In Spring 2019, Danske Bank customers will be offered competitive insurance solutions with unique benefits. This partnership will cover all the countries and markets in which Tryg operates – i.e. both private and commercial in Denmark and Norway, and private in Sweden.

Alka acquisition completed

Tryg received approval of the Alka acquisition from the Danish Competition and Consumer Authority and could finally complete the transaction. Tryg firmly maintains its guidance for synergies of DKK 300m related to the Alka acquisition with a full run-rate impact in 2021.

Financial outlook

The Nordic countries are characterised by a high level of non-life insurance penetration. For example, ratios of non-life insurance premiums to GDP are some of the highest in the world. This is ascribable to the fact that households are relatively wealthy and tend to cover their insurance needs well.

Retention levels are also very high in the Nordic region compared to nearly everywhere else in the world. This is a key profitability driver as it helps insurers to keep their overall expenses at a low level. Retention rates hover around 90% in the Private and Commercial (SMEs) segments, which represent around 75% of Tryg's total business. A direct distribution model also contributes substantially to the very efficient set-up. Close to 100% of new sales in Denmark and Norway (Private and Commercial segments) are generated through Tryg's direct multi-channel distribution set-up.

Tryg reported an expense ratio of 14.4 (14.1 excluding Alka) at the end of 2018, while the target for 2020 is an expense ratio ~14%. In the 2017-2020 period, the expense ratio will be impacted by

increased IT investments, which will, for the most part, be offset by improved distribution efficiency.

The Nordic non-life markets remain very stable in terms of top-line growth (assumed to be in line with GDP) and product offerings. Tryg sees a future where personal insurance will become more relevant compared to the current situation. Health, child and accident insurance products are all part of this development, while product innovation is generally regarded as highly important in mature markets. Tryg wishes to quickly adapt to a future that may be characterised by different insurance needs in terms of product offerings and coverages.

The general macroeconomic situation in Scandinavia remains relatively positive, especially compared to the Euro zone. Government indebtedness is low, unemployment rates are below 5% in both Denmark and Norway, while GDP growth is expected to be close to 2%. Tryg expects gross premium income to grow by 0-2% in local currencies in 2019 (exclusive of M&As), which is unchanged from 2018.

after tax

Alka acquisition completed

In November 2018, Tryg announced that the acquisition of Alka was completed. Tryg has a target for synergies of DKK 300m related to the acquisition with a full run-rate impact in 2021.

Tryg's reserves position remains strong. At the CMD in November 2017, it was disclosed that run-off gains are expected to be between 3% and 5% in 2020. Tryg's systematic claims reserving approach still includes a margin of approximately 3% on best estimate.

In 2019, weather claims net of reinsurance and large claims are expected to total DKK 600m and DKK 550m, respectively. The weather claims assumption now includes the Alka portfolio.

The interest rate used to discount Tryg's technical provisions is historically low. An interest rate increase will have a positive effect on Tryg's results. An interest rate increase of 1 percentage point will increase the pre-tax result by around DKK 300m, and vice versa.

The investment portfolio is divided into a match portfolio corresponding to the technical provisions, and a free portfolio. The objective is for the return on the match portfolio to be approximately zero as capital gains and losses on the assets side should be mirrored by corresponding developments on the liabilities side. The free portfolio is

invested in different asset classes with a view to obtaining the best risk-adjusted return.

The return on bonds in the free portfolio (approximately 65% of the free portfolio) will vary, but given current interest rate levels, a very low return is expected. For shares, the expected return is around 7% with the MSCI World Index as benchmark, while the expected return for property is around 5%. The investment return in the income statement also includes the cost of managing investments, the cost of currency hedges, interest expenses on subordinated loans and other minor items.

In the past few years, corporate tax rates have been lowered throughout Scandinavia. In Denmark, the rate will remain at 22% in 2019, while it is 25% in Norway and 22% in Sweden. Capital gains and losses on equities are not taxed in Norway, which reduces the expected tax payable for an average year to 22-23%.

Alka has produced an approximate DKK 300m stand-alone technical result in the past few years. Synergies are expected to be realised in

the amounts of DKK 75m in 2019, DKK 150m in 2020 and DKK 300m in 2021. Following the approval of the acquisition, Tryg will book an annual depreciation charge of DKK 127m pertaining to the DKK 1.4bn value of customer relations and branding.

Targets and strategy

First year with a new purpose

2018 was the first year with Tryg's new purpose 'As the world changes, we make it easier to be tryg'. The purpose has been very well received by the employees in Tryg and serves as a guiding principle that unites and motivates the organisation.

Our customers – our most important asset

Our customers are our most important asset. Tryg strives to continuously strengthen customer relations through our advisory services, products, concepts, claims handling procedures and claims prevention measures.

Our employees – our most important resource

Our employees are our most important resource and key to fulfilling our purpose of making it easier to be 'tryg'. All Tryg employees must feel that they have an opportunity to be successful.

Clear and ambitious targets must be set for each individual employee – and regular feedback must be provided. Tryg was pleased to see an increased level of employee satisfaction in 2018 and has now surpassed the general level of employee satisfaction in the financial sector in the Nordic region. Tryg is aiming for the highest level of employee satisfaction in the financial sector in the Nordic region.

Value creation for our shareholders

Tryg's shareholders must see Tryg as a company setting ambitious targets, and as an efficient and

profitable business. Tryg's performance can be measured by its total shareholder return over the years. Tryg aims to increase the annual ordinary dividend, while maintaining stable results and a high level of return on capital employed.

Financial targets

On 20 November 2017, Tryg presented a set of new targets for 2020. The targets were later updated following the acquisition of Alka. Tryg's main target for 2020 is a technical result of DKK 3,300m. Other targets are a combined ratio target at or below 86, an expense ratio target of around 14 and a return on equity target at or above 21% after tax.

The expense ratio will be improved through an increase in distribution efficiency, but will also be impacted by investments in IT, data and analytics. Striking the right balance between efficiency and the need to re-invest in the business is extremely important. This underpins the new 2020 targets.

To meet the financial targets and improve customer experience, Tryg decided to invest an additional DKK 500m in IT, which will be recognised as an intangible asset.

The technical result for FY 2018, excluding one-off costs related to Alka and Alka's contribution to the technical result, was DKK 2,826m, the combined ratio 84.5 and the expense ratio 14.1.

Purpose

As the world changes, we make it easier to be tryg^{a)}

Grasping opportunities to develop rather than just defending our business

- Digitalisation
- New products
- Analytics

Adjusting to customer preferences and needs

- Self-service
- Straight-through processes
- Packaging of products

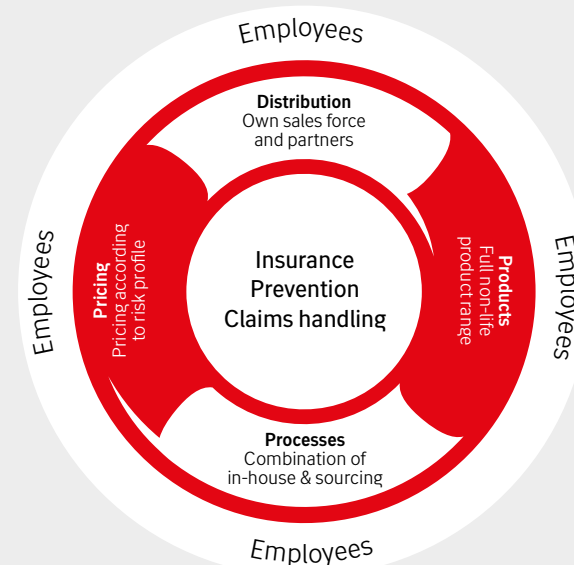

Increase customer relevance and share of wallet

- Product innovation
- Prevention
- Add-on services

Tryg's business model

Tryg makes it easier to be 'tryg'^{a)} for its customers by offering them insurance against risk, efficient claims handling, and advice and services to prevent claims from arising in the first place. By making it easier for our customers to feel protected and cared for, we benefit all of Tryg's stakeholders. Via TryghedsGruppen's 60% ownership of Tryg, part of the company's profit is returned to customers, who are also members of TryghedsGruppen.

Tryg's new purpose is valid for all stakeholders – our customers, our employees and our shareholders.

Segments: Private, Commercial and Corporate

Geography: Denmark, Norway and Sweden

a) Tryg' means: feeling protected and cared for.

Customer targets

Our customer targets remain highly relevant for realising our financial targets. Tryg has decided to focus on customer satisfaction for interacting customers. This is measured through the Transactional Net Promotor Score (TNPS). The TNPS target for 2020 is 70, and in 2018 we saw a continual increase throughout the year, and a TNPS of 67 was achieved.

There is a strong correlation between customer loyalty and the number of products per customer, and therefore a target of increasing the number of products by 10% per customer has been set, corresponding to four products per customer. In 2018, the number of products per customer increased from 3.5 to 3.8.

Strategic initiatives

Tryg has defined four strategic initiatives that support both our financial targets and our customer targets for 2020. Furthermore, synergies stemming from the Alka acquisition will also support Tryg's 2020 financial and customer targets.

Claims excellence is targeted at reducing claims costs by DKK 600m. The strategic initiative is on track, and in 2018 realised claims cost

savings of an estimated value of DKK 150m. The drivers of the initiative are:

- Further leverage of Tryg's procurement power which reduced claims costs by more than DKK 100m in 2018. This has been achieved by negotiating better contracts with suppliers and ensuring a higher utilisation rate.
- Increased fraud detection expertise, which has been driving an approximately 25% higher level of fraud discovery. The improvement has been achieved through better automated identification of fraudulent behaviour in relation to online claims, and by improving the fraud identification competencies of the claim handlers.
- Improvement of the claims handling process. The claims handling process has been improved through several initiatives, e.g.: using data and speech analytics, more accurate claim assessment and better recourse management. In 2018, Tryg also initiated the implementation of a new claims handling system, which will further improve the claims handling process.

Partner agreement with NITO

In Q2, Tryg Norway entered into a partnership with NITO – the largest partner agreement in Norway in 17 years. NITO has almost 90,000 members.

Employee satisfaction

Tryg has an employee satisfaction level above the average of the Nordic sector.

a) Source: Global Employee and Leadership Index

Tryg is committed to the **Digital empowerment of customers**. Tryg's target for 2020 is 50% straight-through processing (STP) of claims and a self-service level of 70% for all contacts with Tryg. The aim is to provide customers with seamless digital services that simplify their interaction with Tryg. In 2018, Tryg achieved a STP level of approximately 15% and a self-service level above 50%. The focus on digital services is expected to support both the financial targets with DKK 100m and the customer targets. The 2018 result within this strategic area amounts to approximately DKK 20m and has been achieved through:

- Increased use of robots in the claims handling process. More than 17,000 claims were processed as STP, and in 2019 and 2020 the new claims handling system will further boost the number of STP in Denmark and Norway.
- In 2018, the number of digital self-service interactions surpassed the number of 'analogue' interactions with Tryg. This has been achieved by continuously introducing more digital self-service solutions for customers. Specifically, in Norway Tryg's digital focus led to the launch of the first online sales solution in the market for the Commercial segment.

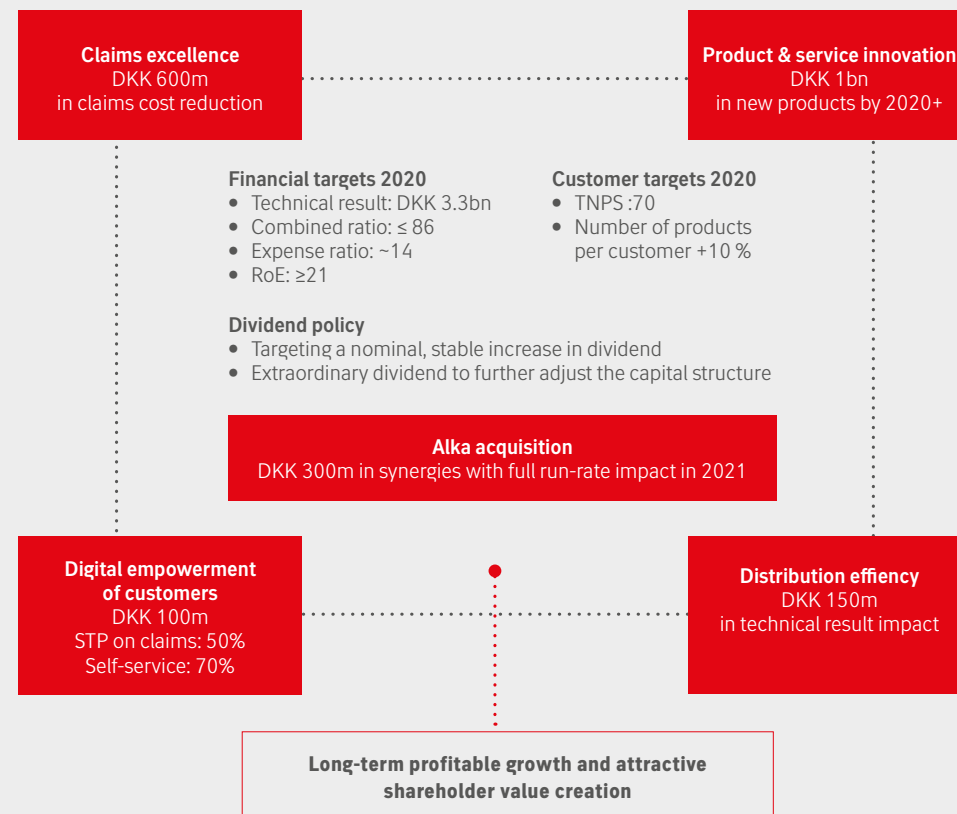

Tryg's digital solutions also proved important when entering into new partner agreements with, e.g., the Norwegian Society of Engineers and Technologists (NITO), the Federation of Danish Motorists (FDM), OBOS in Norway and Danske Bank.

Product and service innovation is targeted at DKK 1,000m in 2020+. In 2018, the portfolio of these innovative products and services grew to approximately DKK 275m. Through this initiative Tryg wishes to adapt to a future which may be characterised by different insurance needs in terms of products and coverages. The key focus is profitability, and Tryg prefers not to define a specific growth target for this strategic area. The focus within this initiative are:

- Developing products related to personal insurance and technology which are not in the market today. Examples of this are Tryg's new health insurance product which can be customised to individual needs, a new cyber insurance product for the Commercial and Corporate segments, aimed at preventing and helping companies under cyber attack, and 'Tryg Drive' in Denmark and 'SideKick' in Norway, which reward customers for responsible driving behaviour with lower premiums.

Strategy 2018-2020

Strengthening the core, while embracing the future

- Entering new markets. Tryg is planning to develop its profitable credit and surety business, Tryg Garanti, by introducing the product in countries outside the Nordics.

Distribution efficiency is targeted to have an impact of DKK 150m in 2020. In 2018, Tryg achieved efficiency gains through improved distribution corresponding to an estimated value of approximately DKK 30m. The financial impact of this initiative is more back-end loaded as part of the improvement is driven by increased sales. The primary drivers for this strategic initiative are:

- Changing the mix of distribution channels in the Private and Commercial segments (both in Denmark and Norway) to lower sales costs. In the Danish Private business, Tryg engages with independent sales agents selling exclusively for Tryg. In Norway, the Commercial business employs a similar franchise concept, and in the Danish Commercial business, a new type of sales agent was introduced in Q3 2018 that combines the traditional sales agent and customer centre sales.
- Partner agreements. The new partner agreements with NITO, OBOS, FDM and Danske Bank will contribute significantly to boosting distribution efficiency in 2019/2020, as good leads are made available to the sales organisation.

Alka synergies

As part of the Alka acquisition, synergies in the amount of DKK 300m are expected to be achieved in 2021. Tryg has announced targets of DKK 75m in 2019, DKK 150m in 2020 and DKK 300m in 2021. Tryg will continuously report on the synergies achieved throughout the year.

Corporate Responsibility

Corporate Responsibility (CR) is an integrated part of Tryg's core business and is closely linked to our purpose 'as the world changes, we make it easier to be tryg'. Tryg means feeling protected and cared for. We focus on activities related to human and labour rights, climate and environment as well as anti-corruption, and we are actively working to integrate CR into our insurance, claims handling and prevention activities. CR plays a role in our decision-making, our risk mitigation, the improvement and development of our products and services, the optimisation of our operations and business partners, the development of our employees, and the contributions we make to society at large through our activities and strategic partnerships.

Tryg's results

Tryg reported a technical result of DKK 2,766m (DKK 2,789m), or DKK 2,826m (DKK 2,789) adjusted for the Alka acquisition. The investment result was DKK -332m (DKK 527m) driven primarily by negative development in the equity markets. The 2018 pre-tax result was DKK 2,262m (DKK 3,239m) or DKK 2,398m (DKK 3,239m), adjusted for the Alka acquisition. Different returns in equity investments account for DKK 565m difference in the pre-tax result. Quarterly dividend of DKK 1.65 per share supporting TryghedsGruppen's member bonus. Solvency ratio of 165 following approval of the Alka transaction.

Results 2018

Tryg reported a technical result of DKK 2,766m (DKK 2,789m), or DKK 2,826m (DKK 2,789) adjusted for the Alka acquisition. The investment result was DKK -332m (DKK 527m) driven primarily by negative development in the equity markets. Other income and expenses were DKK -172m (DKK -77m). The 2018 results were impacted by one-offs of DKK -200m in Q4 2018 as a result of the Alka transaction, an amount of DKK -124m of which was booked in the technical result and DKK -76m in other income and expenses. Alka contributed with DKK 63m (for November and December) to the overall technical result.

Tryg reported an improved technical result (excluding Alka) for Private, Commercial and Sweden while Corporate was impacted by a high level of large claims. The combined ratio was 85.1% (84.4%) driven by a claims ratio of 70.7% and an expense ratio of 14.4%. The combined ratio was 84.5% adjusting for the one-offs related to Alka split between a claims ratio of 70.4% and an expense ratio of 14.1%.

Large claims were substantially higher than in 2017 while weather claims were modestly higher, the run-off result was also higher. The return on equity (after tax) was 14.9% (28.8%). Price adjustments

of around 3% and the initiatives launched at the Capital Markets Day (hereafter CMD) in November 2017 had a positive impact on results, as shown by an improvement in the underlying claims ratio for the full year, both for the private segment and at group level. Premium growth in local currencies was 6.3%, or 2.3% exclusive of mergers and acquisitions as well as portfolio acquisitions.

Capital markets developed negatively in 2018. Equities and other 'risky assets' were impacted by several geo-political turbulences and intensifying talk of a trade war between the US and China. Equities returned approximately -11% for 2018 (driven by a -14.9% return in Q4 2018), while emerging market debt (a small asset class for Tryg) returned -6.7%. The negative investment return for 2018 was due primarily to turbulence in the last quarter of 2018, with equities seeing a particularly negative development. The investment return totalled DKK -332 (DKK 527m) for the FY where approximately 2/3 of the difference compared to 2017 can be traced back to vast differences in equity market performance.

In 2018, Danish customers received their third member bonus from TryghedsGruppen (Tryg's 60% majority shareholder). The 8% bonus is appreciated by customers and is expected to

The underlying claims ratio showed an underlying improvement of 0.4 percentage points for the Group and of 0.5 percentage points for the Private segment.

become an important competitive advantage by boosting customer loyalty and customer targets. TryghedsGruppen has announced that the member bonus is a recurring payment although the level of bonus paid will be decided yearly. Stability is also important from this point of view. Tryg will be implementing price adjustments of around 3% in 2019 to continue improving the underlying level of profitability.

Premiums

Premiums totalled DKK 18,740m (DKK 17,963m), representing 6.3% growth in local currencies. Premiums grew 4.1% in local currencies excluding Alka. Developments were characterised by satisfactory growth in Private Denmark and Private Norway, price increases in the Corporate segment and satisfactory growth in Sweden, driven mainly by pet insurance. Alka contributed DKK 386m to the Group premium as the business was consolidated for approximately two months.

Price adjustments and generally positive economic developments throughout Scandinavia are likely to support top-line developments in 2019.

The Private segment reported growth of 5.1% excluding Alka (DKK 338m), driven by positive developments both in Private Denmark and Private Norway and small bolt-on acquisitions.

Private Denmark continues to perform well, supported by the member bonus from TryghedsGruppen, price adjustments and an increase in customer numbers. Private Norway is building further on the good momentum seen during the second half of 2018, showing top-line growth, also adjusting for portfolio acquisitions.

The Commercial segment reported premium income growth of 3.7% in local currencies, helped by Alka (DKK 48m), portfolio acquisitions and a positive portfolio development. The member bonus continues to support the Danish part of Commercial, which is currently showing very high retention levels.

The Corporate segment reported premium income growth of 4.0% in local currencies, helped by price increases and low-risk fronting agreements. In Corporate Denmark, the development in premium income was positively helped by the member bonus model, a good development in the surety and credit business (Tryg Garanti) and price adjustments. Corporate Norway's top-line development was helped by the pricing initiatives pushed through to improve profitability in a highly competitive market.

The Swedish business grew by 4.9%, driven mostly by the pet insurance segment (double-digit growth) and the extended warranty business.

Additionally, the core private product portfolio also developed favourably.

Claims

The claims ratio, net of ceded business, was 70.7% (70.4%), while the underlying claims ratio (excluding Alka and related one-offs), showed an underlying improvement of 0.4 percentage points driven by price adjustments and claims excellence initiatives. At the CMD in November 2017, Tryg launched a new strategy, which includes a DKK 600m 'claims excellence' programme, and in 2018 savings of DKK 150m were achieved. It is important to note that savings of approximately DKK 50m were impacting previous year's results (run-off gain) and not current-year figures.

Claims inflation is monitored continuously, and price adjustments are pushed through accordingly. Motor insurance remains a very profitable segment, although an increase in claims frequency was seen, especially in the Norwegian part of the business, together with an increase in the average cost of claims due to the gradual introduction of more electronics. Additionally, in Norway approximately half of all new vehicles sold are electric/hybrid, some of which are associated with different risk characteristics compared to normal vehicles. As a result, pricing must be carefully scrutinised.

In 2018, large claims totalled DKK 490m (DKK 243m), while weather claims totalled DKK 384m (DKK 298m). The level of large claims was somewhat below normalised expectations (DKK 550m), while the level of weather claims was also below the normal level (DKK 600m starting in 2019 including Alka). The overall run-off result was DKK 1,221m (DKK 972m) or 6.5% (5.4%) on the combined ratio. The higher level was primarily driven by higher releases in Motor TPL, Workers Compensation and Accident and Health.

Expenses

The expense ratio was 14.4% (14.0%), with one-off costs of DKK 75m relating to the Alka transaction being booked in Q4 2018; without these the expense ratio would have been 14.1%. At the CMD, Tryg announced an expense ratio target around 14% in 2020. Tryg has already launched many initiatives aimed at reducing distribution costs, such as the use of new and cheaper distribution channels and the optimisation of existing channels. The benefits from these initiatives have, to some degree, been invested in digital solutions.

Investment activities

The investment return totalled DKK -332m (DKK 527m), impacted negatively by capital market turbulence in the last three months of 2018.

Tryg pays a Q4 dividend per share of DKK 1.65 bringing the full-year dividend per share to DKK 6.60. 2018 was the seventh year in a row with an increased dividend.

Equities and other risky assets posted negative returns, driven by geo-political turbulence and intensifying talk of a trade war between the US and China. Equities returned approximately -11% for 2018 (driven by a -14.9% return in Q4 2018), while emerging market debt (a small asset class for Tryg) returned -6.7%. The free portfolio posted an overall result of DKK -33m (DKK 598m) for FY 2018, as positive developments in the first nine months were erased by negative developments in the last quarter of the year. The match portfolio result was DKK -2m (DKK 227m) as interest rates and credit spreads generally saw a flat development for the full-year 2018. Other financial income and expenses totalled DKK -297m (DKK -298m).

Other income and costs

Other income and costs were DKK -172m (DKK -77m). The much higher figure compared to 2017 was driven by the inclusion of one-off costs of DKK 76m relating to Alka (transaction costs) and also a DKK 19m depreciation charge relating to customer relations and branding in connection with the Alka transaction.

➤ **More details** can be found here in a newsletter at [tryg.com](#) (Modelling the Alka integration)

Tax

Tryg paid a total tax bill of DKK 529m (DKK 720m), or 23.3% of the profit before tax.

Capital position

The solvency ratio (based on Tryg's partial internal model) was 165 at year-end. The solvency ratio was slightly lower than expected, driven by a longer (than initially estimated) period to obtain the Alka approval and therefore higher interest payments to the seller. Additionally negative investment returns (not related to equities) in Q4 have also weighed negatively on the solvency ratio. Tryg will pay a Q4 dividend of DKK 1.65 per share on 25 January 2019, which is in line with the dividend paid for the first three quarters of the year and also in line with the policy of paying a flat quarterly dividend.

Own funds totalled DKK 8,058m (DKK 13,162m). The comparative figure at the end of 2017 was positively impacted by the raising of capital in the amount of DKK 4bn to fund the Alka acquisition, while the year-end 2018 figure was impacted by intangibles of DKK 5.7bn relating to that acquisition. During 2018, own funds were positively impacted by the net profit, and negatively impacted by the ordinary dividend and the extraordinary dividend paid in March 2018 (announced at the CMD in November 2017) and the issuance of SEK 700m Tier 1 notes during the spring.

Tryg's own funds comprise mainly shareholders' equity, intangibles (fully deducted), Tier 2 instruments (subordinated debt and natural perils pool), Tier 1 instruments and future profits. The vast majority of Tryg's own funds are constituted by shareholders' equity. The Tier 2 capacity has been fully utilised, while currently DKK 140m of Tier 2 bonds are not included in the own funds as they exceed the 50% solvency capital requirement (hereafter SCR). The Tier 1 capacity has also been virtually fully utilised following the SEK 700m spring issue to help fund the Alka acquisition. The future profit item increased during 2018 from DKK 970m to DKK 1,408m. This follows the integration of the highly profitable Alka business and an initial conservative approach together with improved profitability of the underlying business.

Tryg's solvency ratio displays low sensitivities to capital market movements. The highest level of sensitivity is towards spread risk, where a widening/tightening of 100 basis points would impact the solvency ratio by approximately 14 percentage points. Lower sensitivities are displayed towards equity market falls and interest rate movements.

The Supervisory Board regularly assesses Tryg's capital position. In 2018, Tryg announced the payment of DKK 1bn in extraordinary dividend in

March following an announcement at the CMD in November 2017. Continuous assessments of the company's capital position are carried out, in which the SCR is projected based on Tryg's forecasts. The projections include initiatives set out in the company's strategy for the coming years, and also the most significant risks identified by the company. Adequacy is measured in relation to Tryg's strategic targets, including return on equity and dividend policy.

Tryg calculates its individual SCR based on a partial internal model in accordance with the Danish Financial Supervisory Authority's Executive Order on Solvency and Operating Plans for Insurance Companies. The model is based on the structure of the standard model. Tryg uses an internal model to evaluate insurance risks, while other risks are calculated using standard model components. The SCR, calculated using the partial internal model, was DKK 4,892m compared to DKK 4,684m at the end of 2017. The upward move in the SCR during 2018 was primarily driven by the inclusion of Alka, which increases the SCR by DKK 397m. A re-balancing of Alka's investment portfolio will reduce this to approximately DKK 350m in the long term. The SCR, based on the standard formula, was DKK 5,980m compared to DKK 5,838m at the end of 2017.

Tryg has previously (at CMD in November 2017) announced plans to reduce the SCR by up to 10%. The plan included the introduction of a model for Danish workers' compensation, which was adopted in 2018, and the inclusion of the Swedish business in the partial internal model, while also fine-tuning other parts of the model.

Dividend policy

Tryg's dividend policy targets a nominal, stable increase in the dividend on a full-year basis. Tryg introduced quarterly dividends in 2017. The quarterly payment was DKK 1.65 per share, or a total of DKK 6.60 (DKK 6.40) for 2018. This equates to total dividend payments of DKK 1,994m, or 115% of the profit for the year.

Moody's rating

Tryg has an 'A1' (stable outlook) insurance financial strength rating (IFSR) from Moody's. The rating agency highlights Tryg's strong position in the Nordic P&C market, robust profitability, very good asset quality and relatively low financial leverage. Moody's also assigned an 'A3' rating to Tryg's subordinated debt and a 'Baa3' rating to the recent Tier 1 issue. All ratings were confirmed following the announcement of the Alka acquisition.

Results Q4 2018

The technical result was DKK 596m (DKK 622m), impacted by one-off costs of DKK 124m while the consolidation of Alka contributed a positive DKK 63m. The technical result adjusted for the Alka acquisition was DKK 656m. The profit before tax was DKK 149m (DKK 685m), impacted negatively by one-off costs of DKK 200m relating to the Alka transaction and a negative investment result, driven by turbulence in the equity markets. The reported combined ratio for the quarter was 88.2% based on a claims ratio of 72.6% and an expense ratio of 15.6%. The combined ratio excluding Alka and related one-offs was 85.9%, driven by a claims ratio of 71.5% and an expense ratio of 14.4%.

The underlying claims ratio (Tryg excluding Alka and one-offs) improved by 0.4 percentage points for the Group and 0.5 percentage points for the Private segment, continuing the positive trend seen in 2018. Tryg pays a quarterly dividend of DKK 1.65 (DKK 499m) and reports a solvency ratio of 165.

Premiums

Premiums grew 4.5% excluding Alka, impacted by a good organic growth and helped by minor portfolio acquisitions. Premium growth came mostly from the Private segment in both Den-

mark and Norway, but a positive development was seen also in the Commercial business. Corporate growth was driven mainly by Tryg Garanti and price increases, mostly in the Norwegian part of Corporate, to improve the underlying profitability. Tryg will implement price adjustments of approximately 3% also in 2019 to offset the general claims inflation and improve the profitability of selected parts of the portfolio.

Claims

The claims ratio, net of ceded business, was 72.6% (72.3%), impacted negatively by one-offs in the amount of DKK 49m relating to the Alka acquisition. Large claims were DKK 84m (DKK 79m), which is at a similar level compared to Q4 2017 but below a normal level, while

weather claims were lower than normal at DKK 83m (DKK 126m). The run-off result was DKK 207m (DKK 219m). The underlying claims ratio improved 0.4 percentage points for the Group and 0.5 percentage points for Private.

Expenses

The reported expense ratio was 15.6% (13.7%), impacted negatively by one-offs in the amount of DKK 75m relating to the Alka acquisition. The expense ratio would have been 14.4% excluding the aforementioned one-offs.

Investments

The investment return totalled DKK -330m (DKK 86m) for Q4 2018, driven by a return of DKK -198m (DKK 138m) on the free portfolio,

a return of DKK -42m (DKK 13m) on the match portfolio and other financial income and expenses of DKK -90m (DKK -65m).

The free portfolio negative result was driven by negative developments in equity markets. Tryg's equity portfolio returned approximately -15% in the quarter. Additionally, fixed income returns were also negative, driven by a poor performance of emerging markets debt in Q4 (-6.7% return).

The match portfolio produced a negative return driven by both its components, regulatory deviation and performance. The regulatory deviation produced a DKK -19m (DKK 11m) result as Danish swap rates widened vs the Euro swap rates, while the performance component produced a DKK -23m (DKK 2m) result as Nordic covered bonds spreads widened.

Other financial income and expenses was DKK -90m (DKK -65m), a somewhat higher level than normalised expectations. Increased interest expenses on the loans (Tier 1 & Tier 2 loans), higher leasing costs (IFRS 16 accounting standard on leasing) and a write-down of a couple of minor

strategic investments explain most of the difference compared to Q4 2017.

Other income and expenses

Other income and expenses totalled DKK -117m (DKK -23m). The negative development was driven by one-off costs of DKK -76m in the form of transaction costs in connection with the Alka acquisition. Additionally, Tryg has started the depreciation of customer relations and branding from the Alka transaction. This had an additional negative impact of DKK -19m in the quarter. Tryg has announced that the depreciation of customer relations and branding will have an annual impact (booked on the other income and expenses line) of DKK -127m.

Taxes

Tryg paid DKK 37m of taxes in Q4 or an overall tax rate of just below 25%. The tax effect of losses on the equities portfolio have been offset by adjustments to taxes for previous quarters, resulting in a total tax rate of 24.8 per cent for the quarter and 23.4 per cent for the full year – in line with the expectations of the beginning of the year.

Private

Results 2018

The technical result for 2018 was DKK 1,734m (DKK 1,565m) with a combined ratio of 81.6 (82.1). The development is attributable to the combination of higher premium income relating to the Alka portfolio and an improved level of underlying claims. Organic premium growth, excluding Alka and minor portfolio acquisitions, increased compared to 2017, driven by both the Danish and Norwegian part of the Private segment.

Premiums

Gross premium income increased by 8.9% (1.1%) in local currencies, primarily due to the Alka acquisition. Premiums increased by 12.6% in Denmark, or 6.0% excluding of Alka. The increase was driven by a number of factors, such as increased retention rates, package concepts and a strong interest in Tryg's claims prevention initiatives, including alarms for home insurance policyholders, and rat blockers for house insurance policyholders. Tryg also registered a further increase in awareness of the customer bonus from TryghedsGruppen.

In Norway, premium income increased by 3.8% in local currencies, mainly due to the OBOS and Troll acquisitions. The main driver related

to OBOS has been sales to members, and the private portfolio is now three times bigger than when Tryg acquired the portfolio.

The retention rate in Denmark increased from 90.2 to 91.2, while in Norway the retention rate increased from 85.8 to 86.7. The positive development in Denmark can be ascribed to a positive impact from the member bonus model and a strong focus on customer loyalty. In Private Norway, there was also a strong focus on customer loyalty, and the positive development was likely impacted by a reduction in the number of small, but very aggressive (and unprofitable) competitors in Norway.

Claims

The gross claims ratio totalled 65.5 (66.0), and the claims ratio, net of ceded business, 67.8 (68.4). The underlying claims level, excluding Alka, improved by 0.5 percentage points, which was attributable to the claims excellence programme and price adjustments aimed at mitigating increased claims inflation. The level of weather-related claims was somewhat higher, primarily due to winter weather in Norway in Q1 2018.

Private encompasses the sale of insurance products to private individuals in Denmark and Norway. Sales are effected via call centres, the Internet, Tryg's own agents, franchisees (Norway), interest organisations, car dealers, estate agents and Nordea branches.

The business area accounts for 51% of the Group's total premium income.

Expenses

The expense ratio for Private was 13.8 (13.7) and was almost unchanged and in line with the expectations for Tryg in general, reflecting investments in digital solutions financed by distribution efficiency.

Total employee numbers increased from 1,000 at the end of 2017 to 1,329 in 2018, mainly due to the acquisition of Alka and the upscaling of distribution to include more efficient channels.

Results Q4 2018

The technical result totalled DKK 531m (DKK 394m), with a combined ratio of 80.1 (82.0). The higher technical result was due to the inclusion of Alka for approximately two months. The underlying claims ratio, excluding Alka, improved by 0.5 percentage points, which is in line with developments in previous quarters.

Premiums

Gross premiums increased by 21.2% (1.1%) in local currencies and were impacted by the Alka acquisition. Excluding the Alka acquisition, premium growth was 6.1%.

The retention rate in Denmark increased from 90.2 to 91.2, while in Norway the retention rate increased from 85.8 to 86.7.

Claims

The gross claims ratio was 64.2 (65.7), and the claims ratio, net of ceded business, was 66.6 (68.3). The underlying claims ratio excluding Alka improved by 0.5 percentage points. It was impacted by the ongoing claims excellence programme and price adjustments aimed primarily at mitigating claims inflation. Weather claims were lower compared to an average fourth quarter and also below prior-year quarter.

Expenses

The expense ratio was 13.5 (13.7) and was impacted by the integration of Alka.

New house insurance product

In September 2018, Private Denmark launched a new house insurance product, which includes a rat blocker. The rat blocker is another important claims prevention initiative from Tryg. The rat blocker prevents rats from entering private houses from the sewers and damaging houses, pipes etc.

Commercial

Results 2018

The technical result for 2018 was DKK 784m (DKK 667m), with a combined ratio of 80.3 (82.6). The combined ratio was affected by an aggregate level of weather claims and large claims, lower than the previous year, and a higher level of run-off. The development in premiums improved significantly due to the Alka and OBOS acquisitions.

Premiums

The development in gross premium income was positive 3.7% (-0.7%) in local currencies, as mentioned impacted by the Alka and OBOS acquisitions. There was also an underlying improvement in premium income for both the Danish and Norwegian Commercial business. Excluding the acquisitions, growth in Commercial Denmark was 1.1% and in Commercial Norway 1.4%.

To further improve this development, Commercial Denmark will continue to capitalise on the member bonus from TryghedsGruppen and has already started to hire more efficient sales agents to lower the cost of sales. The market position of Commercial Norway was strengthened through the acquisition of OBOS, which – in combination with initiatives supporting greater distribution power – fuelled a positive development in underlying premiums.

The retention rate for Commercial Denmark increased from 87.7 to 88.0, while in Norway the retention rate increased significantly from 86.9 to 87.7. The positive developments in Denmark and Norway can be ascribed to a strong customer focus, while in Denmark the customer bonus model also supported the development.

Claims

The gross claims ratio was 58.6 (62.7), with a claims ratio, net of ceded business, of 62.8 (65.4). The lower claims level was due to a higher level of run-offs, but the aggregate level of large claims and weather claims was also at a lower level compared to prior year.

Expenses

The expense ratio for Commercial was 17.5 (17.2). The expense level is generally too high for Commercial, especially for the distribution part, and Commercial Denmark has therefore started to recruit a new type of sales agents with the aim of lowering cost of sales. In Denmark, Commercial also decided to start working with independent sales agents selling only for Tryg. This is a new type of distribution channel in Denmark that has proven to be very efficient for Private Denmark in Q4.

Commercial encompasses the sale of insurance products to small and medium-sized businesses in Denmark and Norway. Sales are effected via Tryg's own sales force, brokers, franchisees (Norway), customer centres as well as group agreements.

The business area accounts for 21% of the Group's total premium income.

The total number of employees increased from 479 at the end of 2017 to 516 in 2018. The increase was ascribable to the new type of low-cost sales agents in Denmark and the acquisition of Alka.

Results Q4 2018

The technical result was DKK 270m (DKK 138m), with a combined ratio of 74.2 (85.9). The result was positively affected by a substantial decrease in the level of large claims, but also a high level of run-off gains. Premium growth was a positive 6.8% (2.3%), primarily due to the Alka and OBOS acquisitions.

Premiums

Gross premiums increased by 6.8% (2.3%) in local currencies, primarily due to the above-mentioned acquisitions. Excluding the acquisitions premium, growth was 1.9%. The retention rate in Denmark increased to 88.0 (87.7), while the retention rate in Norway increased significantly to 87.8 (86.9) due to a strong focus on customer loyalty.

Claims

The gross claims ratio was 52.2 (66.3), with a claims ratio, net of ceded business, of 56.7 (70.0). The much lower level was due to a substantial decrease in large claims and a higher level of run-offs, but also an underlying improvement driven by claims excellence initiatives.

Expenses

The expense ratio was 17.5 (15.9), which was somewhat higher than for the prior-year period, primarily due to an extraordinarily low level last year. Going forward, Commercial will focus strongly on reducing costs.

Track-and-Trace feature

In Q1 2018, Private Denmark launched a claims track-and-trace feature, which means that customers will be able to follow the processing of claims online.

Corporate

Results 2018

The technical result was DKK 173m (DKK 386m), with a combined ratio of 95.6 (90.0). The result was negatively affected by a significantly higher level of large claims. Premiums were up 4.0% (2.1%) and were impacted by price hikes, an increased level of fronting business and in Denmark a high retention level driven by the customer bonus model. The corporate market is generally challenged in all countries, even following significant price hikes, especially in Norway. Tryg is determined to improve profitability and will increase prices in 2019, which – depending on the reaction from competitors – might reduce premium income.

Premiums

Gross premium income was up 4.0% (2.1%) in local currencies. An increase of around 5.4% was seen in Denmark due to a positive development for the Guarantee business (Tryg Garanti) and very high retention levels, which is probably ascribable to the customer bonus model. In Norway, premium increased by 1.7%, primarily due to price hikes. In Sweden, which accounts for only 20% of the total Corporate business, premium growth was 3.6%.

Claims

The gross claims ratio totalled 79.9 (67.7), and the claims ratio, net of ceded business, 85.7 (79.8). The higher claims level was primarily due to the development in large claims in Norway. A higher level of large claims is bound to happen from time to time, and this is not a problem as such. The issue for Corporate is that the underlying profitability is not satisfactory, and price hikes will therefore be implemented, especially in Norway, and have a greater impact than the initiatives in 2018.

This year, Tryg has communicated very actively to brokers in the Norwegian market that Tryg will implement price hikes to improve profitability, and therefore a reduction in the portfolio is expected.

In Denmark, profitability initiatives will also be implemented, but Tryg's position in the Corporate market in Denmark is generally much better due to the member bonus payments from Trygheds-Gruppen.

In Sweden, more significant steps were taken to improve profitability, especially for specific segments. Profitability still needs improving for motor insurance and liability.

Corporate sells insurance products to corporate customers under the brands 'Tryg' in Denmark and Norway, 'Moderna' in Sweden and 'Tryg Garanti'. Sales are effected both via Tryg's own sales force and via insurance brokers. Moreover, customers with international insurance needs are served by Corporate through its cooperation with the AXA Group.

The business area accounts for 20% of the Group's total premium income.

Expenses

The expense ratio for Corporate was 9.9 (10.2), and it was quite stable throughout the year. As the cost of handling large clients is relatively low – when taking account of premium levels – and as brokers are paid directly by the customers, Corporate should have a much lower expense ratio than Private and Commercial.

The number of employees increased from 250 at the end of 2017 to 265 in 2018, primarily related to the guarantee business.

Results Q4 2018

The technical result was a negative DKK -117m (DKK 60m), with a combined ratio of 111.8 (93.8). The results were negatively impacted by a higher level of large claims and run-off losses on some specific claims. Premium growth was a positive 2.9% (3.0%), primarily due to price hikes and growth in the guarantee business.

Premiums

Gross premiums were up 2.9% (3.0%) in local currencies, primarily due to guarantee business in Denmark, price hikes in Norway and high retention levels, especially in the Danish business.

Claims

The gross claims ratio was 92.7 (74.6), and the claims ratio, net of ceded business, 101.5 (83.7). The much higher level was primarily due to the high level of large claims and run-off loss on some claims in the Swedish business, which led to a total negative run-off for the quarter.

Expenses

The expense ratio was 10.3 (10.1) and in line with the level in Q4 2017.

TryghedsGruppen's member bonus

In June, Tryg's majority shareholder TryghedsGruppen, paid out a member bonus for the third year running. The bonus corresponds to 8% of the premium paid to Tryg in 2017, or the payout of DKK 720m in total to TryghedsGruppen's members and Tryg's Danish customers.

Sweden

Results 2018

Sweden Private posted a result of DKK 201m (DKK 171m), which represented a slight improvement compared to the prior-year result primarily ascribable to reduced expense levels. 2018 was not impacted by mergers and acquisitions, and based on growth of approximately 5% and improved profitability, was a good year for the Swedish Private business.

Premiums

Premium income increased by 4.9% (12.5%) in local currencies. In 2017, growth was driven by the acquisition of Skandia's child insurance portfolio. In 2018, growth of 4.9% was achieved through organic growth, especially from pet insurance, motor insurance and accident insurance. The inbound team performed strongly in 2018. Changed legislation in Sweden has made outbound sales more challenging as companies can't close sales but must have customers accept after the call, for example using text messaging.

Claims

The gross claims ratio totalled 69.6 (70.9) and was affected by a somewhat higher run-off level. In some product areas, we saw slightly higher claims levels, and price adjustments will therefore be implemented in 2019 together with an expected higher level of identifying fraud.

Expenses

The expense ratio was much lower at 16.1 (16.9), which can be ascribed to a continued focus on effective distribution and the integration of the Skandia portfolio. Employee numbers were almost unchanged from 353 at the end of 2017 to 354 in 2018, reflecting a strong focus on efficiency.

Results Q4 2018

Sweden's technical result totalled DKK 38m (DKK 30m), with a combined ratio of 89.2 (91.3). Premium growth was a positive 7.7% (5.1%). The expense level improved to 17.2 (17.7).

Sweden comprises the sale of insurance products to private customers under the 'Moderna' brand. Moreover, insurance is sold under the brands Atlantica, Bilsport & MC and Moderna Djurförsäkringar. Sales take place through its own sales force, call centres, partners and online.

The business area accounts for 8% of the Group's total premium income.

Weather claims, net of reinsurance (%)	0.0	2.5	0.5	0.9

Premiums

Gross premiums were up 7.7% (5.1%) in local currencies, driven by growth in motor, accident and pet insurance.

Claims

The gross claims ratio was 71.7 (73.0), and net of ceded business 72.0 (73.6). The decrease was primarily due to a lower level of weather-related claims. As mentioned before, we saw some claims inflation for some products, which will be mitigated through minor price adjustments.

Expenses

The expense ratio was 17.2 (17.7), reflecting a continued focus on efficiency. In the past two years, the expense ratio has been reduced by almost 3 percentage points.

Employee numbers were more or less unchanged at 354 (353).

New strategic partnership

In November 2018, Tryg and Danske Bank entered into a partnership. The partnership covers all the countries in which Tryg operates – both the Private and Commercial segments in Denmark and Norway, and Private, in Sweden.

Investment activities

The investment return totalled DKK -332m (DKK 527m) for FY 2018, driven by a return of DKK -33m (DKK 598m) on the free portfolio, a return of DKK -2m (DKK 227m) on the match portfolio, and other financial income and expenses of DKK -297m (DKK -298m).

The total market value of Tryg's investment portfolio was DKK 41bn (DKK 43bn) at year-end 2018. The investment portfolio consists of a match portfolio of DKK 29bn (DKK 32bn) and a free portfolio of DKK 11bn (DKK 11bn). The match portfolio is composed of fixed-income assets that match the Group's insurance liabilities, so that fluctuations resulting from interest rate changes are offset to the greatest possible extent. The free portfolio is the Group's capital, which is predominantly invested in fixed-income securities with a short duration, but also in equities and properties.

Free portfolio

Financial markets ended the year on a turbulent path driven by a sharp fall in equity markets in the last three months of 2018. Continuous talk of a trade war between the USA and China, public criticism by the US President to the Chair of the Federal Reserve on the direction of interest rates, turbulence in France and Italy and a highly uncertain situation around Brexit and overall growth

expectations revised downwards for 2019-2020, this has been the difficult background of the end of 2018.

Tryg's equity portfolio returned DKK -212m (approximately -11%) in 2018 vs DKK 353m (approximately 16%) in 2017. The drastic difference in returns from equities explains around 2/3 of the difference in the Group's investment return in 2018 vs 2017. The fixed-income portfolio also produced a negative return of DKK -93m (DKK 153m), driven primarily by widening credit spreads across virtually all fixed-income asset classes. The return on the investment property portfolio was DKK 272m (DKK 92m) or 13.0%. The high return on the properties portfolio was helped by a properties revaluation of DKK 80m in Q1 and DKK 75m in Q4.

Equity and property investments totalled DKK 4.1bn, while approximately DKK 2.2bn were invested in credit bonds. The remaining DKK 4.4bn were primarily invested in Nordic covered bonds and Government bonds, including inflation-linked bonds, where current yields remain negative, putting downward pressure on the return on the free portfolio and the overall investment income.

Match, performance	-23	2	0	129

Match portfolio

The result of the match portfolio is the difference between the return on the match portfolio and the amount transferred to the insurance business. The result can be split into a 'regulatory deviation' and a 'performance result'. The most important driver of the 'regulatory deviation' is the yield difference between Euro swap rates and Danish swap rates. In Norway and Sweden, Tryg hedges using local swaps corresponding to the EIOPA curve; hence only the Danish exposure is relevant.

The regulatory deviation made a slightly negative contribution of DKK -2m (DKK 98m) as the yield difference between Danish and Euro swap rates was virtually unchanged. The regulatory deviation is sensitive to the yield spread, but as the hedge portfolio has switched to a higher degree of Euro swaps, the sensitivity is lower.

The most important driver of the performance result is the difference in yields between Danish, Norwegian and Swedish covered bonds and

equivalent swap rates. If spreads narrow (versus swap rates), the overall performance is positive; otherwise the overall performance is negative. The performance made a contribution of DKK 0m (DKK 129m) as Nordic covered bonds, were broadly flat against the swap curve, looking at the full-year development. Tryg has previously mentioned that normalised long-term expectations for the match portfolio should be around zero.

Other financial income and expenses

The other financial income and expenses component is primarily made up of interest expenses related to outstanding subordinated debt, the cost of the currency hedge to protect shareholders' equity, the cost of running the investment operations and the new accounting standard related to leasing (IFRS 16). Other financial income and expenses totalled DKK -297m (DKK -298m) for FY 2018. In a newsletter published in the summer of 2016 (Modelling investment income), Tryg wrote

^{a)} Senior/Bank deposits less than 1 year and derivative financial instruments hedging interest rate risk and credit risk.

^{b)} In addition to the equity portfolio exposure is derivatives contracts of DKK 235m.

that the 'other financial income and expenses' line should have a quarterly negative impact of approximately DKK -50m. In its Q3 2018 report, Tryg added that considering the new lease accounting standard and the increased interest expenses on the subordinated loans, the overall 'other financial income and expenses' result is now expected to exceed DKK -60m on a quarterly basis.

Investment activities in Q4 2018

The last quarter of 2018 was characterised by very volatile developments especially in equity markets. Tryg's equity portfolio returned DKK -284m (DKK 112m) or -14.9% for the quarter, dominated by a spike in the CBOE Volatility Index (VIX), a key measure of market expectations of near-term volatility in equity markets. The geo-political backdrop was challenging driven by the continuous talk of a trade war between the USA and China, public criticism by the US President to the Chair of the Federal Reserve about the direction of US interest rates as well as more geo-political troubles in France and Italy.

Brexit uncertainty was at its peak as well during the month of December, while a key parliamentary vote is expected to the beginning of January 2019. The fixed-income portfolio also returned a small loss of DKK -16m (DKK 1m), driven primarily by turbulence in the high-yield and emerging-markets

segments (small asset classes for Tryg). Finally, the property portfolio made a positive contribution of DKK 102m (DKK 25m) in the quarter, helped by a property revaluation of DKK 75m in Q4.

The match portfolio had a negative result in both its components, regulatory deviation and performance. The regulatory deviation produced a DKK -19m (DKK 11m) result as Danish swap rates widened 4 basis points vs the Euro swap rates, while the performance component produced a DKK -23m (DKK 2m) result as Nordic covered-bonds spreads also widened in the quarter, primarily in Denmark and Norway.

Other financial income and expenses was DKK -90m (DKK -65m), a somewhat higher level than normalised expectations. Increased interest expenses on loans (Tier 1 & Tier 2 loans), higher leasing costs (IFRS 16 accounting standard on leasing) and a write-down of a couple of minor strategic investments explain most of the difference compared to Q4 2017.

The overall investment result in Q4 was DKK -330m (DKK 86m), where the vast majority of the large swing (vs Q4 2017) can be explained by very different developments in equity markets. Tryg's equity portfolio returned -14.9% in Q4 2018 (DKK -284m) against 4.3% in Q4 2017 (DKK 112m).

Capital and risk management

Risk management is based on Tryg's targets and strategies and the risk exposure limits decided by the Supervisory Board. The assessment and management of Tryg's aggregated risk and the associated capital requirements therefore constitute a central element in the management of the company. Tryg's Supervisory Board defines the framework for the company's target risk appetite and thereby the capital which must be available to cover any losses.

Insurance risk

The insurance risk is managed by limiting the size of single large commitments and through the use of reinsurance, thus reducing the maximum cost of large claims. Furthermore, the insurance risk is managed through geographical limitations and by refraining from offering certain types of insurance such as aviation and marine hull insurance. Operating within these boundaries, Tryg's risk depends on the company's choice of exposure within different segments and industries in the insurance market. Tryg operates in relatively stable markets (Nordic non-life markets), while almost 60% of premiums (including the Alka book) are in the Private segment. Quarterly fluctuations are driven mainly by large claims and weather events, and reinsurance is used extensively to stabilise the overall earnings level.

Investment risk

Invested assets are split into a match portfolio (DKK 29bn) and a free investment portfolio

(DKK 11bn). The objective is for the return on the match portfolio to be as close as possible to zero as capital gains and losses on the assets side should be mirrored by corresponding developments on the liabilities side. The free portfolio is intended to produce the maximum risk-adjusted return. The investment risk associated with the free portfolio is managed through limits on exposures within each asset class (bonds, shares, properties etc.).

Solvency II

The Solvency II regime emphasises the need for sound risk management and introduces additional requirements concerning risk governance, consistency across the Group and top management reporting and involvement. Tryg has been working towards implementing the principles of Solvency II for years and has, among other things, performed risk identification routines, prepared ORSA (Own Risk and Solvency Assessment) reports, acted in a setup comprising three lines of defence and appointed a special Risk Committee under the Supervisory Board. Tryg's partial internal model was approved by the Danish FSA in November 2015. Read more about Tryg's risk management in Note 1 on page 60.

Solvency Financial Condition Report (SFCR)

European insurers had to publish SFCR reports for the first time in 2017, and Tryg was one of the first companies to publish its SFCR report in May 2017.

Tryg is focused exclusively on non-life insurance, it is mainly present in only three countries (Denmark, Norway and Sweden), and it has a fairly simple legal structure, which means that the SFCR report contains very little additional information compared to larger European peers, which typically offer both life and non-life insurance, which are present in many countries and have more complex legal structures. The additional information includes a geographical breakdown of capital charges, a balance sheet according to Solvency II as opposed to IFRS (statutory financial statements), and SCR (Solvency Capital Requirement) components as per the end of 2017. The publication of Tryg's SFCR report attracted a lot of attention in the insurance industry in 2017 with a clear focus on capital quality, including the use of transitional measures and the impact of long-term guarantee measures. Tryg's solvency position does not factor in any benefits from these measures as the company is a pure non-life insurer with relatively short-term liabilities. In 2018, the report attracted less focus as analysts/investors have grown accustomed to the new solvency regime.

Capital management

Capital management is based on Tryg's partial internal capital model, which was approved by the Danish FSA in November 2015. Tryg has modelled the insurance risk internally, while using

the standard formula for all other risks. The capital model is based on Tryg's risk profile and therefore takes into consideration the composition of Tryg's insurance portfolio, geographical diversification, its claims reserves profile, reinsurance programme, investment mix and Tryg's profitability in general. The solvency ratio is defined as own funds divided by the Solvency Capital Requirement.

The key components of Tryg's own funds are shareholders' equity, qualifying debt instruments (both Tier 1 and Tier 2 debt) and future profit, while all intangibles are deducted in the calculation. Both the Tier 2 and the Tier 1 capacity has been virtually fully utilised; currently some

Solvency Capital Requirement

Tryg will pay a Q4 dividend of DKK 1.65 per share on January 25

DKK 140m of Tier 2 instruments are not included in the own funds as they exceed the 50% SCR limit.

Tryg announced the Alka acquisition in December 2017 and raised DKK 4bn of 'new' equity right after the transaction. In 2018, own funds have primarily been impacted by the net profit and dividend payments. The Alka acquisition was completed on 8 November 2018, hence in the last quarter of the year intangibles were up by approximately DKK 5.7bn. The future profit item has increased from DKK 970m to DKK 1,408m following the integration of the highly profitable Alka business and an initial conservative approach concurrently with improved profitability of the underlying business. Own funds totaled DKK 8,058m at the end of 2018 vs DKK 13,162m at the end of 2017.

The Solvency Capital Requirement (SCR) is calculated in such a way that Tryg statistically should be able to honour its obligations in 199 out of 200 years. In other words, Tryg could have a negative result greater than DKK 4,892m (the SCR) in 1 out of 200 years. Tryg's SCR was DKK 4,892m at the end of 2018, up approximately DKK 200m from the end of 2017. The consolidation of the Alka business resulted in a stand-alone increase of the SCR of just below DKK 400m, while a lower capital charge on equities, following the negative markets in Q4, reduced the SCR by approximately DKK 250m.

At the Capital Markets Day on 20 November 2017, Tryg announced measures to reduce the SCR by up to 10%. The inclusion of Danish workers' compensation in the partial internal model reduced the SCR by approximately DKK 100m in Q4 2017, while further work to include Sweden in the internal model and other minor adjustments will reduce the SCR further. All changes are subject to approval by the Danish FSA.

Tryg's solvency ratio displays low sensitivity towards capital market movements. The highest sensitivity is towards spread risk, where a widening/tightening of 100 basis points will impact the solvency ratio by 14 percentage points. A lower sensitivity is displayed towards equity market falls and interest rate fluctuations. A change in the UFR (Ultimate Forward Rate) will have an insignificant impact. This is unsurprising, considering that Tryg underwrites only non-life risks with a relatively short duration.

Ordinary and extraordinary dividend

The Supervisory Board regularly assesses the capital structure of the company in light of future internal earnings forecasts and balance sheet needs. The projections include initiatives set out in the company's strategy for the coming years, and are based also on the most significant risks identified by the company. The adequacy is measured in relation to Tryg's strategic targets, including return on equity and dividend policy.

Tryg will pay a Q4 dividend of DKK 1.65 per share on 25 January 2019, which is in line with Q1, Q2 and Q3 levels, and also in line with Tryg's policy of paying out a stable quarterly dividend. The full-year dividend is therefore DKK 6.60 per share, equivalent to a total distribution of just below DKK 2bn. In March 2018 Tryg also paid an extraordinary dividend (announced at CMD in November 2017) of DKK 1bn.

Capital planning and contingency plan

In conjunction with the capital planning, a contingency plan is made. It describes specific measures that may be introduced in the near term, should the company's desired capital position be threatened. Tryg's Supervisory Board has approved both the capital plan and the contingency plan. Read more about Tryg's risk and capital management in note 1 on page 60.

Moody's rating

Tryg has an 'A1' (stable outlook) insurance financial strength rating (IFSR) from Moody's. The rating agency highlights Tryg's strong position in the Nordic P&C market, robust profitability, very good asset quality and relatively low financial leverage. Moody's also assigned an 'A3' rating to Tryg's subordinated debt and a 'Baa3' rating to Tryg's Tier 1 transaction. The ratings were affirmed following the Alka acquisitions.

Own funds

Investor information

Investor Relations (IR) is responsible for Tryg's communication with the capital markets. It is important that investors, analysts and other stakeholders are able to form a true and fair view of developments, including Tryg's financial results. For this reason, Tryg's IR team strives to be as open and transparent as possible to ensure that stakeholders' information requirements are met at the highest possible level. IR is in charge of communication with equity investors, fixed-income investors and rating agencies.

➤ [See Tryg's IR policy at tryg.com > governance](#)

After the publication of quarterly and annual reports, Tryg's management and IR team travel extensively to meet with shareholders and potential investors. Quarterly analyst presentations are held in Copenhagen and London. Tryg also attends various financial conferences. In 2018, we held around 300 investor meetings – mostly one-to-ones and some group meetings in Europe, the USA, Canada and Asia. The Tryg share is covered by 21 analysts, who continuously update their recommendations and earnings forecasts. Tryg hosts an annual analysts day, while more in-depth capital market days are hosted every three years.

➤ [See a list of analysts and their recommendations at tryg.com > investor > share > analysts](#)

The Tryg share

The Tryg share is listed on NASDAQ Copenhagen. Company announcements and transaction statements are published in both Danish and English, whereas interim reports and annual reports are published in English.

➤ [Subscribe to all financial information at tryg.com](#)
➤ [Follow @TrygIR on Twitter](#)

The Tryg share started the year at a price of DKK 156.0 and ended 2018 at DKK 163.9. The total return (price and dividends) of the share was 12.4%. The positive share price development was driven primarily by high earnings stability and an improved underlying financial performance. The insurance sector's key attraction is its dividend yield. Therefore, earnings and solvency are always carefully scrutinised by investors. In the world of Solvency II, movements in solvency levels can be more difficult to predict and often also difficult to understand. Tryg has a relatively simple business model and a transparent capital position, which is highly appreciated by analysts and investors.

NASDAQ Copenhagen remains the primary exchange for trading in the Tryg share. In 2018, NASDAQ Copenhagen accounted for 65% of the turnover of Tryg shares. This means that approxi-

mately 35% of all trading in 2018 took place on alternative exchanges. Daily turnover on NASDAQ averaged DKK 81m, and average daily volume was 535,198.

Share capital and ownership

Tryg's share capital totalled 1,510,739,955 on 31 December 2018. It comprises one share class (302,147,991 shares with a nominal value of DKK 5), and all shares rank pari passu. The number of shares was increased by 27,400,000 after the Alka acquisition. The majority shareholder, TryghedsGruppen smba, owns 60% of the shares and is the only shareholder holding more than 5% of the share capital. TryghedsGruppen invests in peace-of-mind and healthcare providers in the Nordic region, and supports non-profit-making activities.

TrygFonden

TrygFonden is the leading and most well-known peace-of-mind supporter in Denmark, supporting hundreds of activities that contribute to creating peace of mind, such as coastal lifeguards, cuddle bears for children in hospitals and defibrillators. Behind TrygFonden is TryghedsGruppen, which owns 60% of the shares in Tryg and which contributed DKK 600m to projects that create peace of mind in all parts of Denmark in 2018.

TryghedsGruppen

In 2018 and for the third year running, Tryg's majority shareholder, TryghedsGruppen, paid out a member bonus to Tryg's customers in Denmark corresponding to 8% of the annual premiums paid for 2017.

TrygFonden

TrygFonden is the leading and most well-known peace of mind supporter in Denmark, supporting hundreds of activities that contribute to this, such as coastal lifeguards, cuddle bears for children at hospitals and defibrillators. Behind TrygFonden is TryghedsGruppen, which owns 60% of the shares in Tryg and contributed DKK 600m to projects that create peace of mind throughout Denmark in 2018.

TryghedsGruppen

In 2018, for the third year running, Tryg's majority shareholder, TryghedsGruppen, paid out a member bonus to Tryg's customers in Denmark corresponding to 8% of the annual premium paid for 2017.

Quarterly dividends started in 2017

Tryg started paying quarterly dividends in 2017. The Tryg share has a distinct income profile in that the business generally grows in line with GDP, producing high margins, which are mostly returned to shareholders. The prolonged period of very low interest rates in the wake of the financial crisis means that investors, all else being equal, attach even greater importance to dividends than in a more normal environment.

This is particularly true for insurance investors as insurance is one of the sectors offering the highest dividend yield. From an investment perspective, a quarterly dividend is a clear reminder of the high profitability of our business and our focus on returning capital to shareholders. Tryg's dividend policy is based on the following assumptions:

- An aspiration to distribute a nominal, stable increasing dividend in nominal terms on a full-year basis.
- A general objective of creating long-term value for the company's shareholders.

- A competitive dividend policy in comparison with those of our Nordic competitors.
- Annual distribution of 60-90% of our profit after tax.
- The capital level must at all times reflect our return-on-equity targets and statutory capital requirements.
- The capital level may be adjusted via extraordinary dividends.

Annual general meeting

Tryg's annual general meeting will be held on 15 March 2019 at 15:00 CET at Tryg's head office, Klausdalsbrovej 601, 2750 Ballerup, Denmark. The notice will be advertised in the daily press in February 2019 and will be sent to shareholders upon request.

- The annual general meeting will also be announced at tryg.com
- The company announcements published in 2018 can be seen at tryg.com > announcements

Corporate governance

Tryg focuses on managing the company in accordance with the principles of good corporate governance and generally complies with the Danish recommendations prepared by the Committee on Corporate Governance. The Recommendations on Corporate Governance are available at corporate-governance.dk. At tryg.com, Tryg has published its statutory corporate governance report based on the 'comply-or-explain' principle for each individual recommendation. This section on corporate governance is an excerpt of the corporate governance report.

Dialogue between Tryg, shareholders and other stakeholders

Tryg's Investor Relations (IR) department maintains regular contact with analysts and investors. Together with the Executive Board, IR organises investor meetings, conference calls and participates in conferences in Denmark and abroad. IR also communicates with stakeholders on social media via [Twitter@TrygIR](https://twitter.com/TrygIR).

The Supervisory Board is informed about the dialogue with investors and other stakeholders on a regular basis. Tryg has an IR policy, which states, among other things, that all company announcements are published in Danish and English. Tryg

publishes quarterly interim reports in English. Furthermore, Tryg publishes an annual profile in Danish, English and Norwegian. The profile is addressed to Tryg's private shareholders, customers, employees and other stakeholders and will be published on 5 February 2019.

Moreover, Tryg prepares quarterly investor presentations, which are used in our dialogue with investors and analysts. Tryg also publishes IR newsletters on relevant topics on a regular basis. All announcements, financial reports, presentations and newsletters are available at tryg.com. This material provides all stakeholders with a comprehensive picture of Tryg's position and performance.

The consolidated financial statements are presented in accordance with IFRS. At tryg.com, stakeholders are invited to subscribe to press releases, company announcements as well as trading announcements by insiders. A number of internal guidelines ensure that the disclosure of price-sensitive information complies with legislation and stock exchange codes of conduct. Tryg has adopted a number of policies describing the relationship between different stakeholders.

➤ **See the IR policy at** tryg.com > Governance > Policies > IR policy

Annual general meeting

Tryg holds an annual general meeting (AGM) every year. As required by the Danish Companies Act and the Articles of Association, the AGM is convened via a company announcement and at tryg.com subject to at least three weeks' notice. Shareholders may also opt to receive the notice by post or email. The notice contains information about time and venue as well as an agenda for the meeting.

All shareholders are encouraged to attend the AGM. The AGM is held by personal attendance as the Supervisory Board values personal contact with the Group's shareholders. Shareholders may propose items to be included on the agenda for the AGM, and may ask questions before and at the meeting. Shareholders may vote in person at the AGM, by post or appoint the Supervisory Board or a third party as their proxy. Shareholders may consider each item on the agenda. The proxy form and the form for voting by post are available at tryg.com prior to the AGM.

Share and capital structure

Tryg's share capital comprises a single share class, and all shares rank *pari passu*. The majority shareholder, TryghedsGruppen smba, owns 60% of the shares and is the only shareholder owning more than 5% of the company's shares. The Supervi-

sory Board ensures that Tryg's capital structure is aligned with the needs of the Group and the interests of its shareholders, and that it complies with the requirements applicable to Tryg as a financial undertaking. Tryg has adopted a capital plan and a contingency capital plan, which are reviewed annually by the Supervisory Board.

Depending on the development in results, each year the Supervisory Board proposes the distribution of quarterly dividends, and possibly an extraordinary annual dividend if further adjustment of the capital structure is required.

Duties, responsibilities and composition of the Supervisory Board

The Supervisory Board is responsible for the central strategic management and financial control of Tryg and for ensuring that the business is organised in a sound way. This is achieved by monitoring targets and frameworks on the basis of regular and systematic reviews of the strategy and risks. The Executive Board reports to the Supervisory Board on strategies and action plans, market developments and Group performance, funding issues, capital resources and special risks.

The Supervisory Board holds one annual strategy seminar to decide on and/or adjust the Group's

strategy with a view to sustaining value creation in the company. The Executive Board works with the Supervisory Board to ensure that the Group's strategy is developed and monitored. The Supervisory Board ensures that the necessary skills and financial resources are available for Tryg to achieve its strategic targets. The Supervisory Board specifies its activities in a set of rules of procedure and an annual cycle for its work.

Eight members of the Supervisory Board were elected by the annual general meeting for a term of one year. Of the eight members elected at the annual general meeting, five, and thus the majority, are independent persons, thus complying with recommendation 3.2.1. in the Recommendations on Corporate Governance, while the other three members are dependent persons as they are appointed by Tryg's majority shareholder, Trygheds-Gruppen. See pages 41-42 for information on when the individual members joined the Supervisory Board, were re-elected and when their current election period ends. To ensure continuity and integration of new talent on the Supervisory Board, members elected by the annual general meeting may hold office for a maximum of 12 years. The Supervisory Board has 12 members, seven men and five women (currently including two male and two female employee representatives).

The representation of women in Tryg's Supervisory Board is thus compliant with legislation as well as Tryg's policy. The Supervisory Board has members from Denmark, Sweden and Norway.

i See details about the independent board members in the section [Supervisory Board on pages 40-42](#) and at [tryg.com > Governance](#)

The Supervisory Board performs an annual evaluation of its work and skills to ensure that it possesses the expertise required to perform its duties in the best possible way. The Supervisory Board focuses primarily on the following qualifications and skills: Intellectual approach, independent mindedness, interpersonal competencies, integrity, inclination to engage, business understanding and judgement, problem-solving skills, networking skills, risk management understanding, ability to assess succession management, general top management experience, finance and/or audit experience, HR/management/talent/organisational experience, business development experience, financial sector experience, risk management and regulatory requirement experience, insurance – commercial and product, insurance – technical (underwriting, provisions, reinsurance), digital experience, experience with new business models and customer relations and interaction experience.

i See CVs and descriptions of the skills in the section [Supervisory Board on pages 40-42](#) and at [tryg.com > Governance](#)

Duties and composition of the Executive Board

Each year, the Supervisory Board reviews and adopts the rules of procedure of the Supervisory Board and the Executive Board comprising relevant policies, guidelines and instructions describing reporting requirements and requirements for communication with the Executive Board. Financial legislation also requires the Executive Board to disclose all relevant information to the Supervisory Board and report on compliance with limits defined by the Supervisory Board and in legislation.

The Supervisory Board considers the composition, development, risk and succession plans of the Executive Board in connection with the annual evaluation of the Executive Board, and regularly in connection with board meetings. Each year, the Supervisory Board discusses Tryg's activities to guarantee diversity at management levels. Tryg ascribes great importance to diversity at all management levels. Tryg has prepared an action plan, which sets out specific targets to ensure diversity and equal opportunities and access to management positions for qualified men and women. In 2018, the share of women at management

level was 33% against 37% in 2017. The target for 2018 of 38% or more women at management level was therefore not met. Compared to 2017, the number of women in management positions decreased by three. In 2018, Tryg increased the total number of management positions and the decrease in share of women in management positions is mainly due to organisational changes.

➤ See the action plan at [tryg.com](#)

Board committees

Tryg has an Audit Committee, a Risk Committee, a Nomination Committee, a Remuneration Committee and an IT-Data Committee. The frameworks for the committees' work are defined in their terms of reference.

➤ See The board committees' terms of reference can be found at [tryg.com > Governance > Management > Supervisory Board > Board committees, including descriptions of members, meeting frequency, responsibilities and activities during the year](#)

➤ See the tasks of the board committees in 2018 at [tryg.com > Governance > Management > Supervisory Board > Board committees](#)

Three out of four members of the Audit Committee and three out of five members of the Risk Committee, including the chairman of the committees, are independent persons. Two out of the four members of the IT-Data Committee, including the chairman of the committee, are independent. Of the four members of the Remuneration Committee, two members are independent persons, and both members of the Nomination Committee are independent. Board committee members are elected primarily based on special skills that are considered important by the Supervisory Board.

Involvement of the employee representatives in the committees is also considered important. The committees exclusively prepare matters for decision by the entire Supervisory Board.

➤ The special skills of all members are also described at tryg.com

Remuneration of management

Tryg has adopted a remuneration policy for Tryg in general which contains specific schemes for the Supervisory Board, the Executive Board and other employees in Tryg, whose activities have a material impact on the risk profile of the company, so-called risk-takers. The remuneration policy

for 2018 was adopted by the Supervisory Board in January 2018, and approved by the annual general meeting on 15 March 2018.

The Chairman of the Supervisory Board reports on Tryg's remuneration policy each year in connection with the review of the annual report at the annual general meeting. The Board's proposal for the remuneration of the Supervisory Board for the current financial year is also submitted for approval by the shareholders at the annual general meeting.

➤ See the remuneration policy at tryg.com

Remuneration of the Supervisory Board

Members of Tryg's Supervisory Board receive a fixed fee and are not comprised by any form of incentive or severance programme or pension scheme. Their remuneration is based on trends in peer companies, taking into account the required skills, efforts and the scope of the Supervisory Board's work, including the number of meetings held. The remuneration received by the Chairman of the Supervisory Board is three times that received by ordinary members, while the Deputy Chairman's remuneration is twice that received by ordinary members of the Supervisory Board.

Total remuneration of the Supervisory Board in 2018

DKK	Fee	Audit Committee	Risk Committee	IT-Data Committee	Remuneration Committee	Total
Jukka Pertola	1,033,548			140,000	143,549	1,317,097

Jørgen Huno Rasmussen ^{a)}	226,452				31,451	257,903

^{a)} Resigned from the Supervisory Board in March 2018

Remuneration of the Executive Board

Members of the Executive Board are employed on a contractual basis, and all terms of their remuneration are established by the Supervisory Board within the framework of the approved remuneration policy.

Tryg wants to strike an appropriate balance between management remuneration, predictable risk and value creation for the company's shareholders in the short and long term.

The Executive Board's remuneration consists of a base salary, a pension contribution of 25% of the base salary and other benefits. The base salary must be competitive and appropriate for the market and provide sufficient motivation for all members of the Executive Board to do their best to achieve the company's defined targets. The Supervisory Board can decide that the base salary should be supplemented with a variable pay element of up to 50% of the fixed salary including pension.

The variable pay element consists of a Matching Shares Programme. The Executive Board may buy shares (so-called investment shares) in Tryg A/S

Total remuneration of the Executive Board in 2018								
DKK	Base salary	Pension	Car allowance	Other benefits	Total fixed salary	One-off fee	Share-based remuneration ^{c)}	Total fee

^{e)} 1 January-8 November, Johan Brammer received a pay supplement of DKK 150,000 per month plus pension for managing two positions as Head of Private Denmark and CCO.

at market price for a predefined amount, which is dependent on the member's performance for the fiscal year. Four years after the purchase, Tryg will grant one matching share per investment share free of charge.

Matching is conditional upon fulfilment of additional conditions such as continued employment and back testing (testing prior to matching, to ensure that the criteria on which the variable salary

is based are still met at the time of matching). The purpose of the Matching Shares Programme is to ensure alignment of the interests of the Executive Board and the company's shareholders.

Each year the Supervisory Board evaluates the performance of the Executive Board against the targets defined by the Supervisory Board for the financial year. The overall fulfilment of the weighted targets determines the number of investment shares of-

ferred to each member of the Executive Board. The targets for 2018 were based on Tryg's technical result, Transactional Net Promoter Score, employee satisfaction levels, the incorporation of Alka and the implementation of the strategy.

➤ **Read more about the Matching Shares Programme in the remuneration policy at tryg.com**

Financial reporting, risk management and auditing

As an insurance business, Tryg is subject to the risk management requirements of the Danish Financial Business Act and Solvency II. The Supervisory Board defines Tryg's risk management framework as regards insurance risk, investment risk, compliance risk and operational risk, as well as IT security, in policies and guidelines for the Executive Board. Risks associated with new financial reporting rules and accounting policies are monitored and considered by the Audit Committee, the finance management and the internal auditors. Material legal and tax-related issues and the financial reporting of such issues are assessed on an ongoing basis.

i Other risks associated with the financial reporting are described in the section [Capital and risk management on pages 31-32](#) and in [Note 1 Risk management on page 60](#)

Tryg engages in ongoing risk identification, mapping insurance risks and other risks which may endanger the realisation of Tryg's strategy or which may potentially have a substantial impact on Tryg's financial position. The process involves identifying and continually monitoring the risks identified. As in previous years, Tryg undertook an Own Risk and Solvency Assessment (ORSA) in 2018. The purpose of the ORSA is to ensure

and demonstrate a link between strategy, risk management, risk appetite, solvency and capital planning over the planning period.

The Supervisory Board and the Executive Board approve and monitor the Group's overall policies and guidelines, procedures and controls in important risk areas. They receive reports about developments in these areas and about the ways in which the frameworks are applied. The Supervisory Board checks that the company's risk management and internal controls are effective. The Board receives reports on non-compliance with the frameworks and guidelines established by the Supervisory Board. The Risk Committee monitors the risk management on an ongoing basis and reports quarterly to the Supervisory Board.

The Group's internal control systems are based on clear organisational structures and guidelines, general IT controls and segregation of functions, which are supervised by the internal auditors.

As part of the internal control system, Tryg has established independent risk management, compliance and actuarial functions. The functions report to the Executive Board and the Supervisory Board's Risk Committee. Tryg has a decentralised set-up whereby risk manag-

ers in the business areas carry out controlling tasks for the risk management and compliance functions.

Risk management is an integral part of Tryg's business operations. The Group seeks at all times to minimise the risk of unnecessary losses in order to optimise returns on the company's capital.

i [Read more about Tryg's risk management in the section Capital and risk management on pages 31-32 and in Note 1 on page 60](#)

Whistleblower line

Tryg has a whistleblower line, which allows employees, customers and business partners to report any serious wrongdoings or suspected irregularities. Reporting takes place in confidence to the chairman of the Audit Committee and the Head of Compliance.

➤ [Read more about Tryg's whistleblower line at tryg.com](#)

Independent and internal audit

The Supervisory Board ensures monitoring by competent and independent auditors. The Group's internal auditor attends all board meetings. The independent auditor attends the annual board meeting at which the annual report is presented.

The annual general meeting annually appoints an independent auditor recommended by the Supervisory Board. At least once a year, the auditors meet with the Audit Committee without the presence of the Executive Board. The chairman of the Audit Committee deals with any matters that need to be reported to the Supervisory Board.

Tryg's internal audit department regularly reviews the quality of the Group's internal control systems and business procedures. It is responsible for planning, performing and reporting on the audit work to the Supervisory Board.

Deviations and explanations

Tryg complies with the Recommendations on Corporate Governance with the exception of the number of independent members of board committees, with which Tryg complies partially, and agreements on termination payments; see recommendations 3.4.2. and 4.1.5. of the Recommendations on Corporate Governance.

✗ [The deviations are explained in Tryg's statutory corporate governance report, which is available at tryg.com > Download](#)

Corporate Responsibility in Tryg

Statutory Corporate Responsibility report

Tryg has been a signatory member to the UN Global Compact since 2008. Our 2020 Corporate Responsibility strategy focuses on three areas – Peace of mind in society, Responsible workplace and Customer relations – and is closely linked to our business model (see page 11). In 2018, Tryg's Corporate Responsibility policy was updated to further clarify its alignment with our purpose 'As the world changes, we make it easier to be tryg'^{a)} and to establish a closer link to our Corporate Responsibility strategy.

Claims prevention is a central part of Tryg's 2020 corporate strategy and our Corporate Responsibility efforts. Our ambition is to minimise and prevent the number of claims by integrating prevention initiatives into our insurance products.

In addition to this Corporate Responsibility section, we have published an independent Corporate Responsibility report with extended Environmental, Social and Governance (ESG) data.

 **Download the Corporate Responsibility report**

Peace of mind in society

Nightravens

As part of our efforts to create peace of mind in society, we are committed to running the Nightravens secretariat in Norway. The Nightravens are local groups of volunteers who walk the streets at night offering help and preventing unwanted incidents. There are more than 300 groups of Nightravens in Norway made up of a diverse mix of volunteers in terms of their nationality, gender and age.

Lifebuoys

Since 1952, Tryg's iconic lifebuoys have contributed to safety along the coastline, lakes and rivers in Norway. The lifebuoy is a vitally important piece of rescue equipment, and for decades, Tryg has provided lifebuoys to Norwegian society. Tryg's 43,000 lifebuoys are located from Lindesnes in southern Norway to Svalbard, the Norwegian archipelago in the Arctic Ocean.

Safe in water

In 2018, Tryg partnered with the Norwegian Society for Sea Rescue, Region West, to offer a course called 'Safe in water'. The course is aimed at 12 to 14-year-old schoolchildren. The courses are run eight times a year, in autumn and winter,

and give the children a chance to experience being in the cold water wearing wetsuits and life jackets, while being supervised by skilled instructors. The courses focus on understanding the risks associated with water, on practising first aid and learning the key principles of self-rescue and lifesaving. Learning to throw Tryg lifebuoys is also an important part of the course.

Responsible workplace

In 2018, Tryg conducted an internal assessment of the 17 UN Sustainable Development Goals (SDGs) and the associated 169 targets. As one of the largest non-insurance companies in the Nordic region, we have a responsibility and an opportunity of making an impact on the SDGs and use our expertise to help realise the goals. See our 2018 independent Corporate Responsibility report for further information on methodology and selected targets.

Workplace responsibility

Our employees are our most valuable resources and key to providing competent and high-quality services to our customers. The well-being of our employees is vital to Tryg, as is protecting their right to a healthy and safe working environment.

Through our materiality assessment, it has become clear that there is a risk that Tryg can have adverse impacts on its employees through, for example, dissatisfaction, discrimination or the physical or psychosocial working environment. To mitigate this risk, we are continuously working to improve conditions for our employees.

Tryg has collective bargaining agreements in the Scandinavian countries where more than 99% of our employees are employed. The majority of our Scandinavian employees are covered by these agreements, and the remaining employees are on individual contracts. All Tryg employees are covered according to national standards and requirements.

Acknowledging that our business must evolve and develop in the digital age, we realise that this may potentially have an adverse impact on our employees. Tryg mitigates the adverse impact through external outplacement programmes, while ensuring that many reductions in employee numbers take the form of natural departures.

Employee satisfaction

The annual employee satisfaction survey measures employee satisfaction and monitors

a) 'Tryg' means feeling protected and cared for.

the development in employee satisfaction levels. Processes are in place to ensure that low-scoring departments receive clear guidance and support, and that action plans are made. In 2018, the overall employee satisfaction score was 78, up from 76 in 2017. It proves that our efforts are working, and we will continue this focus going forward.

A diverse company and a driver of change

Women in management positions remain a continuous focus area in Tryg. To support our target, we focus specifically on our recruitment process, while an internal rotation programme is in place to improve conditions and career opportunities for talented women and men.

To further boost and encourage women in management positions, Tryg has an action plan, which is revised annually, outlining actions to support our target of increasing the number of women in management positions. In 2018, we raised our target from 38% to 41% in 2020. In 2018, the share of women in management positions was 33%, a decrease of 4 percentage points compared to 2017 hence we did not meet our target of 38%. Compared to 2017, the number of women in management positions decreased by three. In 2018, Tryg increased the total number of management positions and the declining in share of women in management

positions is mainly due to organisational changes. When recruiting, we focus on getting the best competencies for the job. Going forward, we will continue our efforts on attracting women for management positions.

➤ General action plan for Women in Management

Tryg remains a committed member of the Danish Diversity Council to help inspire and grow the number of women in management positions. To inspire positive role models in Tryg, our LeadTheFuture programme encourages female managers to act as role models by sharing their experiences and knowledge about their own career choices.

Employee mix

Tryg's Supervisory Board has an equal gender distribution. Read more in the Corporate Governance section on page 35-36.

In Tryg, we do not accept discrimination based on gender, age, ethnicity etc., and work actively to nourish an open-minded culture. Tryg additionally has a diverse workforce representing the society we are part of.

➤ See Tryg's Competency and diversity policy

Strengthening our employees

Tryg offers training, e-learning and education to our employees as well as identifying career opportunities through our People Review to ensure development and capacity building.

It is important to maintain a healthy work-life balance, and we aim to be a flexible workplace where it is possible to balance your career and family life.

Human rights and responsible supply chain management

Tryg respects human rights as described in the Universal Declaration of Human Rights. Our commitment is enforced through our signatory membership of the UN Global Compact and is outlined in our Corporate Responsibility policy as well as Tryg's Code of Conduct.

Our materiality assessment indicated that there is a risk of violating human and labour rights in our supply chain through our outsourcing activities. To mitigate any violations, we actively monitor our outsourcing suppliers and seek constructive dialogue. Prior to signing a supplier contract, all suppliers undergo a preapproval process. Our suppliers are required to sign our Code of Conduct which outlines our expectations for our business relations.

Tryg has established a process for auditing our outsourcing suppliers to ensure that any potential or actual adverse impacts and risks in our supply chain are handled. All outsourcing suppliers are asked to fill out a self-assessment questionnaire prior to a scheduled on-site audit. If the on-site audit reveals any potential red flags, it will lead to an action plan and follow-up dialogue. If a supplier does not comply with the requirements imposed by Tryg, we will engage in dialogue to ensure improvement. In case of repeated failed attempts at collaboration, Tryg can terminate the contract as a final resort.

In 2018, our audits revealed no violations or red flags among our audited high-risk outsourcing suppliers.

The process continues in 2019, and all outsourcing suppliers are expected to be audited by 2020.

To support the new audit process, Tryg launched a training programme for procurement employees and auditors in 2018, to build capacity for identifying actual or potential violations on site. The training sessions are held annually.

➤ [See Tryg's Corporate Responsibility policy and Code of Conduct](#)

Climate and environmental responsibility

Tryg has a direct impact on the climate and the environment through our operations, and indirectly through our business activities. We have focused our efforts on our internal operations and on initiatives aimed at improving our footprint, while also reducing costs. Although Tryg is not an energy-intensive company since our carbon emissions are mainly associated with heating and electricity use at our offices, car and air travel, we acknowledge that we are part of the solution to minimising carbon emissions. One of the areas in which Tryg has a potential adverse impact on the environment is waste production, which is why we are committed to reducing waste.

Our materiality assessment showed that the climate and the environment are material issues for Tryg and for our stakeholders. Extreme weather events such as flooding, cloudbursts and storms present a risk to Tryg and are causing harm and concern to our customers and to society in general. Tryg's Corporate Responsibility policy further outlines our commitment to minimising our own environmental footprint.

Climate and environmental initiatives

Tryg has initiated a process to install more efficient and climate-friendly LED lighting at our offices, as well as installing more screens for Skype meetings

to reduce air travel and offering electric cars for external meetings.

In 2018, we installed more electric chargers at our offices in Ballerup, Denmark and Bergen, Norway to encourage our employees to switch to electric cars. Tryg additionally participates in a mobility network with the Municipality of Ballerup to discuss solutions aimed at improving public transport.

We continuously work to minimise and sort our waste at local waste stations to reduce waste volumes. In 2018, several new initiatives to reduce waste at the offices in Norway, resulted in gathering and sorting of large volumes of glass and plastic.

In 2018, Tryg's estimated carbon emissions increased by 3% compared to 2017. The increase is mainly due to an ongoing renovation of our office buildings, extended opening hours and an update of our calculation method for carbon emissions. Thus, we have not achieved our target of a 1% reduction in 2018 compared to 2017. Our target for 2020 is a 2% reduction compared to 2018.

In 2019, Tryg will develop a climate and environmental action plan and focus on a waste reduction initiative at our canteen facilities to grow understanding of waste reduction.

Eco-lighthouse in Norway

The Eco-lighthouse is a climate and environmental certification scheme in Norway. Eight of our Norwegian offices are Eco-lighthouse-certified. We annually produce an Eco-lighthouse report to describe progress and document the policies and procedures in place to manage our impact on the climate and the environment.

Business ethics and compliance

Tryg is committed to running an ethical, transparent and responsible business. Our materiality assessment showed that anti-corruption, business ethics and data protection are material matters to Tryg. Tryg's Code of Conduct defines the rules, which all employees and business partners are required to adhere to. Our Tax policy and Anti-corruption policy further outlines our commitment to acting as a responsible company.

➤ [See Anti-corruption policy and Tax policy](#)

Data security and GDPR

In 2018, the EU's General Data Protection Regulation (GDPR) came into force. Tryg is a data-driven company, and we need data to assess our customers' claims risk. This is the foundation of providing our core product: insurance. Implementing the GDPR regulation means increasing transparency on how we handle customer data and what types of data we use.

Tryg has implemented a GDPR compliance plan and appointed a Data Protection Officer (DPO) to ensure that the necessary systems and processes are in place. Our internal data breach process enables all employees to report any data breaches and all Tryg employees have completed mandatory e-learning on GDPR.

➤ [See our Personal data policy](#)

Whistleblower hotline

Tryg's whistleblower hotline is available for all our stakeholders to report any violation of our Code of Conduct or any other concerns and is handled by the chairman of the Audit Committee, assisted by Tryg's Legal and Compliance Department. In 2018, seven whistleblower cases were reported and investigated, and the necessary actions were taken.

➤ [Tryg's whistleblower hotline](#)

Responsible investments

Our materiality assessment identified responsible investments as a material issue for Tryg. We are at risk of violating international standards when investing, and we want to be transparent about our efforts to mitigate this risk. In 2017, we published our Responsible investment policy, which illustrates our belief in the importance of not violating

international conventions or principles when investing.

In 2018, we updated our process for ethical screenings for potential violations of the conventions in our investment portfolio, including not only our portfolio holdings, but also the ultimate parents. We established an internal procedure for handling any such violations. We perform an ethical screening annually, and will continue our screening practice in 2019.

✕ [Download Tryg's responsible investment policy and Policy for execution of active ownership](#)

Customer relations

Ensuring competent and responsible customer relations is at the core of our business model and our ability to retain our customers year after year.

To measure satisfaction levels among our customers and to help us improve, we ask our customers to rate our performance when having been in contact with Tryg.

In 2018, our Transactional Net Promotor Score (TNPS) was 67. Our target is a score of 70 by 2020.

Tryg has published an independent Corporate Responsibility report with extended Environmental, Social and Governance (ESG) data.

Statement by the Supervisory Board and the Executive Board

The Supervisory Board and the Executive Board have today considered and adopted the annual report for 2018 of Tryg A/S and the Tryg Group.

The consolidated financial statements have been prepared in accordance with the International Financial Reporting Standards as adopted by the EU, and the financial statements of the parent company have been prepared in accordance with the Danish Financial Business Act and the require-

ments of NASDAQ Copenhagen for the presentation of the financial statements of listed companies. In addition, the annual report has been presented in accordance with additional Danish disclosure requirements for the annual reports of listed financial enterprises.

In our opinion, the accounting policies applied are appropriate, and the annual report gives a true and fair view of the Group's and the parent company's

assets, liabilities and financial position at 31 December 2018 and of the results of the Group's and the parent company's operations and the cash flows of the Group for the financial year 1 January-31 December 2018.

Furthermore, in our opinion the management's review gives a true and fair view of developments in the activities and financial position of the Group and the parent company, the results for the year

and of the Group's and the parent company's financial position in general and describes significant risk and uncertainty factors that may affect the Group and the parent company.

We recommend that the annual report be adopted by the shareholders at the annual general meeting.

To the shareholders of Tryg A/S

Opinion

We have audited the consolidated financial statements and the parent financial statements of Tryg A/S for the financial year 1 January to 31 December 2018, pages 54-113, which comprise the income statement, statement of comprehensive income, balance sheet, statement of changes in equity and notes, including the summary of significant accounting policies, for the Group as well as the Parent and the consolidated cash flow statement. The consolidated financial statements are prepared in accordance with International Financial Reporting Standards as adopted by the EU and additional Danish disclosure requirements for listed financial companies, and the parent financial statements are prepared in accordance with the Danish Financial Business Act.

In our opinion, the consolidated financial statements give a true and fair view of the Group's financial position at 31 December 2018 and of its financial performance and cash flows for the financial year 1 January to 31 December 2018 in accordance with International Financial Reporting Standards as adopted by the EU and additional Danish disclosure requirements for financial companies.

Also, in our opinion, the parent financial statements give a true and fair view of the financial position of the Parent at 31 December 2018 and of its financial performance for the financial year 1 January to 31 December 2018 in accordance with the Danish Financial Business Act.

Our opinion is consistent with our audit book comments issued to the Audit Committee and the Board of Directors.

Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (ISAs) and additional requirements applicable in Denmark. Our responsibilities under those standards and requirements are further described in the Auditor's responsibilities for the audit of the consolidated financial statements and the parent financial statements section of this auditor's report. We are independent of the Group in accordance with the IESBA Code of Ethics for Professional Accountants and additional requirements applicable in Denmark, and we have fulfilled our other ethical responsibilities in accordance with these requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Key audit matters

Key audit matters are those matters that, in our professional judgement, were of most significance in our audit of the consolidated financial statements and the parent financial statements for the financial year 1 January to 31 December 2018. These matters were addressed in the context of our audit of the consolidated financial statements and the parent financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

Claims provisions

Management's estimates of the claims provisions are based on actuarial methods and involve complex statistical methods as well as estimates of future events. Changes in methods and assumptions may result in a material impact on the size of the claims provisions. Consequently, the audit of the claims provisions is considered a key audit matter.

The claims provisions amount to DKK 24,847m at 31 December 2018 (2017: DKK 23,925m).

Management has specified the risks etc. related to the estimates of the claims provisions in note 1 'Risk and capital management' on pages 61-62 and in 'Accounting policies', note 30 on pages 98-99. The principles of estimating the claims provisions have been specified in 'Accounting policies', note 30 on pages 104-105, and further specified in note 1 on pages 63-66 and in note 19 on page 89.

The estimates of the claims provisions depend on accurate and complete insurance data of current and historical claims, including the development in claims and payment patterns, as these data are used to establish the expectations for future claims for the purpose of the statistical models.

The most important assessments and assumptions of future events relate to:

- Estimated future claims payments, which are based on the completeness and the accuracy of historical claims and payment patterns, among other factors.
- Expectations for future inflation.
- Determination of the margin included in Management's estimate of the claims provisions to address the uncertainty related to the actuarial estimates.

How the matter was addressed in the audit

- Assessment and test of controls related to the processes of claims handling and the recognition and measurement of provisions for known claims.
- In cooperation with our own internationally qualified actuaries, we have tested controls related to the actuarial estimates of the claims provisions of selected lines of business.
- We have tested the accuracy and the completeness of the data that are included in the actuarial estimates of the claims provisions.
- In cooperation with our own internationally qualified actuaries and based on our knowledge of the industry, experience and historical observations, we have assessed the statistical models applied to estimate the claims provisions and we have tested significant estimates and assumptions focusing on consistency and possible changes.
- Based on the actuarial estimates of the claims provisions and analyses, and in cooperation with our own internationally qualified actuaries, we have assessed the development in the claims provisions, including run-off gains/losses and the development in the size of the margin included in Management's estimate of the claims provisions.

Accounting for business combinations – Acquisition of Forsikrings-Aktieselskabet Alka

On 8 November 2018, Tryg Forsikring A/S has taken over Forsikrings-Aktieselskabet Alka at a total purchase price of DKK 8,477m, resulting in the recognition of goodwill of DKK 4,241m and other intangible assets of DKK 1,429m.

The allocation of the purchase price to assets and liabilities acquired relies on assumptions and estimates made by Management. Due to the significance of these assumptions and estimates and the size of the acquired business, the audit of the acquisition of Forsikrings-Aktieselskabet Alka is considered a key audit matter.

Management has specified the purchase price allocation in 'Acquisition of subsidiaries', note 27 on page 95 and the risks etc. related to the assumptions and judgements in 'Accounting policies', note 30 on page 99. The principles of accounting for business combinations have been specified in 'Accounting policies', note 30 on page 100.

In accordance with the requirements of IFRS 3 'Business Combinations', Management has prepared a purchase price allocation where they have valued the identified acquired assets and liabilities at fair value.

The most important assumptions and estimates relate to:

- Identification of acquired assets and liabilities.
- Future cash flow anticipated from the acquired customer relationship and brand value.
- Discount rate applied.

How the matter was addressed in the audit

- We have tested the purchase price allocation prepared by Management and the identification of acquired assets and liabilities.
- We have assessed and challenged Management's assumptions and estimates used in its fair value models for identifying and measuring customer relationship and brand value.
- We have assessed and challenged Management's assumptions and estimates for future cash flow projections.
- We have consulted with Deloitte's subject matter experts regarding the valuation methodologies and assumptions applied.
- We have obtained supporting documentation of Management's estimates and key assumptions and corroborated certain information – including the applied discount rates – with third party sources.
- We have tested the mathematical accuracy of the calculations in the models.
- We have considered the impact of reasonably possible changes in key assumptions and performed sensitivity calculations to quantify the impact of potential downside changes to Management's models.

To the best of our knowledge and belief, we have not provided any prohibited non-audit services as referred to in Article 5(1) of Regulation (EU) No 537/2014.

We were appointed auditors of Tryg A/S on 28 January 2002 for the financial year 2002 as part of the formation of the Company. However, we have been the appointed auditors of the underlying subsidiaries since before 1995. We have been reappointed annually by decision of the general meeting for a total contiguous engagement period of more than 17 years up to and including the financial year 2018.

Statement on the management's review

Management is responsible for the management's review.

Our opinion on the consolidated financial statements and the parent financial statements does not cover the management's review, and we do not express any form of assurance conclusion thereon.

In connection with our audit of the consolidated financial statements and the parent financial statements, our responsibility is to read the management's review and, in doing so, consider whether the management's review is materially inconsistent with the consolidated financial statements and

the parent financial statements or our knowledge obtained in the audit or otherwise appears to be materially misstated.

Moreover, it is our responsibility to consider whether the management's review provides the information required under the Danish Financial Business Act.

Based on the work we have performed, we conclude that the management's review is in accordance with the consolidated financial statements and the parent financial statements and has been prepared in accordance with the requirements of the Danish Financial Business Act. We did not identify any material misstatement of the management's review.

Management's responsibilities for the consolidated financial statements and the parent financial statements

Management is responsible for the preparation of consolidated financial statements that give a true and fair view in accordance with International Financial Reporting Standards as adopted by the EU and additional Danish disclosure requirements for listed financial companies, and for the preparation of parent financial statements that give a true and fair view in accordance with the Danish Financial Business Act, and for such internal control as Management

determines is necessary to enable the preparation of consolidated financial statements and parent financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements and the parent financial statements, Management is responsible for assessing the Group's and the Parent's ability to continue as a going concern, for disclosing, as applicable, matters related to going concern, and for using the going concern basis of accounting in the preparation of the consolidated financial statements and the parent financial statements unless Management either intends to liquidate the Group or the Parent or to cease operations, or has no realistic alternative but to do so.

Auditor's responsibilities for the audit of the consolidated financial statements and the parent financial statements

Our objectives are to obtain reasonable assurance about whether the consolidated financial statements and the parent financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance

with ISAs and additional requirements applicable in Denmark will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated financial statements and these parent financial statements.

As part of an audit in accordance with ISAs and additional requirements applicable in Denmark, we exercise professional judgement and maintain professional scepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the consolidated financial statements and the parent financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.

- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Group's and the Parent's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by Management.
- Conclude on the appropriateness of Management's use of the going concern basis of accounting in the preparation of the consolidated financial statements and the parent financial statements, and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Group's and the Parent's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the consolidated financial statements and the parent financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence

obtained up to the date of our auditor's report. However, future events or conditions may cause the Group and the Entity to cease to continue as a going concern.

- Evaluate the overall presentation, structure and content of the consolidated financial statements and the parent financial statements, including the disclosures in the notes, and whether the consolidated financial statements and the parent financial statements represent the underlying transactions and events in a manner that gives a true and fair view.
- Obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the consolidated financial statements. We are responsible for the direction, supervision and performance of the group audit. We remain solely responsible for our audit opinion.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide those charged with governance with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with those charged with governance, we determine those matters that were of most significance in the audit of the consolidated financial statements and the parent financial statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

Return on equity after tax (%)	14.9	28.8	26.2	20.0	23.7

a) Profit/loss on discontinued and divested business after tax includes mainly Marine Hull insurance and the Finnish branch of Tryg Forsikring, which was sold in 2012.

b) Up until the sale of the group occupied property in 2016, the gross expense ratio without adjustment is calculated as the ratio of actual gross insurance operating costs to gross premium income. Other key ratios are calculated in accordance with 'Recommendations & Financial Ratios' issued by the Danish Finance Society. The adjustment, which is made pursuant to the Danish Financial Supervisory Authority's and the Danish Finance Society's definitions of expense ratio and combined ratio, involves the addition of a calculated expense (rent) in respect of owner-occupied property based on a calculated market rent and the deduction of actual depreciation and operating costs on owner-occupied property. The sale of owner-occupied property in December 2016 does not affect the calculation.

Notes

1 Risk and capital management

Risk management in Tryg

The Supervisory Board defines the basis for the risk appetite through the business model and the current strategy. The Supervisory Board has regulated the management of risk activities through policies and guidelines to the business supported by underlying business processes and a power of attorney structure. The company's risk management forms the basis for the risk profile being in line with the specified risk appetite at all times. Tryg's risk profile is continuously measured, quantified and reported to the management and the Supervisory Board.

Tryg's risk management is organised into three levels of control. The first level of control is handled in the business where the company's policies are implemented, and day-to-day compliance is verified. The risk management function is the second level of control, supported by decentralised risk managers affiliated with the individual business areas. The risk management function ensures a consistent approach across the organisation, risk assessment at group level and reporting to the management and the Supervisory Board.

This involves an ongoing identification and assessment of the most significant risks in the company. Furthermore, the function prepares specific recommendations in relation to capital management, reinsurance, investment risk management and more. Tryg's risk management function is also responsible for determining the company's capital requirement. The third level consists of the internal audit which performs independent assessments of the entire control environment.

The risk management is organised systematically in the company's committee structure via the Executive Board's own risk committee and the Supervisory Board's own risk committee. The Supervisory Board's risk committee is a specialist committee with intensive focus separately on risk and capital management during the year.

The Supervisory Board's Risk Committee meets minimum four times a year for a detailed review of various risk management topics and regularly keeps the entire Supervisory Board up-to-date on the status.

Capital management

Tryg's capital management is based on the key business objectives:

- A solid capital base, supporting both the statutory requirements and a single 'A' rating from Moody's.
- Support of a dividend per share, with a payout ratio in the interval 60-90%.
- Return on the average equity of at least 21% after tax.

What risk profile does Tryg want?

- Business model
- Strategy
- Policies

How is this supported?

Tactically

- Policies
- Capital plan
- Contingency plan

Operationally

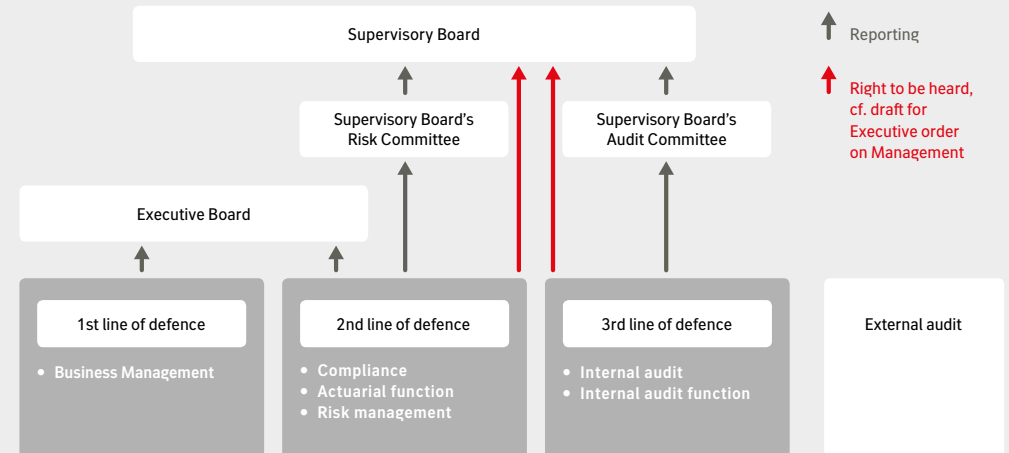

- Frameworks
- Limitations
- Instructions
- Allocated capital
- Contingency plans

How is the actual risk profile measured?

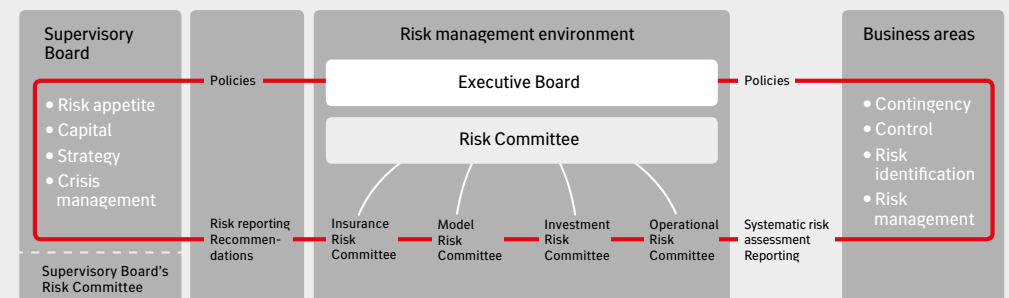

Tactically

- Risk reports
- Internal controls
- Capital model
- Stress tests
- Reassurance

Lines of defence

Tryg's risk management environment

Notes

Tryg's capital base currently consist of Tier 1 and 2 capital, such as shareholders' equity and subordinated loans.

i See table Subordinate loan capital on page 68.

The capital base is continuously measured against the capital requirement calculated on the basis of Tryg's partial internal model, where insurance risks are modelled using an internal model, while other risks are described using the standard formula.

The model calculates Tryg's capital requirement with 99.5% solvency level with a 1-year horizon, which means that Tryg will be able to fulfil its obligations in 199 out of 200 years. The partial internal model has been used for a number of years, and was approved by the Danish Financial Supervisory Authority in 2015.

Monitoring of the capital base also involves capital projections based on expected business plans within the strategic planning period and stress on selected scenarios.

Company's Own Risk and Solvency Assessment (ORSA)

ORSA is the company's own risk assessment based on the Solvency II principles, which implies that Tryg must assess all material risks that the company is or may be exposed to. The ORSA report also contains an assessment of whether the calculation of solvency capital requirement is reasonable and is reflecting Tryg's actual risk profile. Moreover, the projected capital requirement is also assessed over the company's strategic planning period.

Tryg's risk activities are implemented via continuous risk management processes, where the main results are reported to the Supervisory Board and its Risk Committee during the year. Therefore, the ORSA report is an annual summary document assessing all these processes.

Insurance risk

Insurance risk comprises two main types of risks: Underwriting risk and provisioning risk.

Underwriting risk

Underwriting risk is the risk that insurance premiums will not be sufficient to cover the compensations and other costs associated with the insurance business. Underwriting risk is managed primarily through the company's insurance policy defined by the Supervisory Board, and administered through business procedures, underwriting guidelines etc. Underwriting risk is assessed in Tryg's capital model, determining the capital impact from insurance products.

Reinsurance is used to reduce the underwriting risk in situations where this can not be achieved to a sufficient degree via ordinary diversification. Tryg's reinsurance program covers both Tryg and Alka. In case of major events involving damage to buildings and contents, Tryg's reinsurance programme provides protection for up to DKK 6.75bn, which statistically is sufficient to cover at least a 250-year event. Retention for such events is DKK 168m.

In the event of a frequency of natural disasters, Tryg is covered for up to DKK 600m, after total annual retention of DKK 300m. Tryg has also taken out reinsurance for the risk of large claims occurring in sectors with very large sums insured. Tryg's largest individual building and contents risks are covered by up to DKK 2bn. Retention for large claims is DKK 100m, gradually dropping to DKK 25m. Single risks exceeding DKK 2bn are covered individually.

Tryg has combined the minimum cover of other sectors into a joint cover with retention of DKK 100m for the first claim and DKK 25m for subsequent claims. For the individual sectors, individual cover has subsequently

been taken out as needed. The use of reinsurance creates a natural counterparty risk. This risk is handled by applying a wide range of reinsurers with at least an 'A' rating and DKK 750m in capital.

Reserving risk

Reserving risk relates to the risk of Tryg's insurance provisions being inadequate. The Supervisory Board lays down the overall framework for the handling of reserving risk in the insurance policy, while the overall risk is measured in the capital model. The uncertainty associated with the calculation of claims reserves affects Tryg's results through the run-off on reserves.

Long-tailed reserves in particular are subject to interest rate and inflation risk. Interest rate risk is hedged by means of Tryg's match portfolio which corresponds to the discounted claims reserves. In order to manage the inflation risk of Danish workers' compensation claims reserves, Tryg has bought zero coupon inflation swaps. Tryg determines the claims reserves via statistical methods as well as individual assessments.

At the end of 2018, Tryg's claims reserves net of reinsurance totalled DKK 23,585m with an average duration of approximately 4 years.

Investment risk

The overall framework for managing investment risk is defined by the Supervisory Board in Tryg's investment policy. In overall terms, Tryg's investment portfolio is divided into a match portfolio and a free portfolio. The match portfolio corresponds to the value of the discounted claims reserves and is designed to hedge the interest rate sensitivity of these as closely as possible. Tryg carries out daily monitoring, follow-up and risk management of the Group's interest rate risk. The swap and bond portfolio is thus adjusted continuously to minimise the net interest rate risk. The free portfolio is subject

to the framework defined by the Supervisory Board through the investment policy. The purpose of the free portfolio is to achieve the highest possible return relative to risk. Tryg's property portfolio constitutes the company's largest investment risk. The Property portfolio comprises investment properties, the value of which is adjusted based on the conditions on the property market through internal valuations backed by external valuations. At the end of 2018, investment properties accounted for 5.7% (including property funds) and Tryg's equity portfolio accounted for 4.7% of the total investment assets.

Tryg does not wish to speculate in foreign currency, but since Tryg invests and operates its insurance business in other currencies than Danish kroner, Tryg is exposed to currency risk. Tryg is primarily exposed to fluctuations in the other Scandinavian currencies due to its ongoing insurance activities. Premiums earned and claims paid in other currencies create a natural currency hedge, for which reason other risk mitigation measures are not required in this area. However, the part of equity held in other currencies than Danish kroner will be exposed to currency risk. This risk is hedged on an ongoing basis using currency swaps.

In addition to the above-mentioned risks, Tryg is exposed to credit, counterparty and concentration risk. These risks primarily relate to exposures in high-yield bonds, emerging market debt exposures as well as Tryg's investments in AAA-rated Nordic and European government and mortgage bonds. These risks are also managed through the investment policy and the framework for reinsurance defined in the insurance policy. For a non-life insurance company like Tryg, liquidity risk is practically non-existent, as premium payments fall due before claims payments. The only significant assets on Tryg's balance sheet, which by nature is somewhat illiquid, are the property portfolio.

Notes

Operational risk

Operational risk relates to errors or failures in internal procedures, fraud, breakdown of infrastructure, IT security and similar factors. As operational risks are mainly internal, Tryg focuses on an adequate control environment for its operations. In practice, this work is organised by means of procedures, controls and guidelines covering the various aspects of the Group's operations. The Supervisory Board defines the overall framework for managing operational risk in Tryg's Operational risk policy and in the Information Security Policy.

A special crisis management structure is set up to deal with the eventuality that Tryg is hit by major crises. This comprises a Crisis Management Team at Group level, national contingency teams at country level and finally business contingency teams in the individual areas. Tryg has prepared contingency plans to address the most important areas. In addition, comprehensive IT contingency plans have been established, primarily focusing on the business critical systems.

Other risks

Strategic risk

The strategic risk is the risk of loss as a result of Tryg's chosen strategic position. The strategic position covers both business transactions, IT strategy, choice of business partners and changed market conditions. Tryg's strategic position is determined by Tryg's Supervisory Board in close collaboration with the Executive Board.

Before determining the strategic position, the strategic decisions are subject to a risk assessment, explaining the risk of the chosen strategy to Tryg's Supervisory Board and Executive Board.

Compliance risk

Compliance risk is the risk of loss as a result of lack of compliance with rules, regulations, market standards or internal guidelines. The handling of compliance risk is coordinated centrally via the Group's Compliance & Legal department, which, among other things, sits on industry committees in connection with legislative monitoring, ensures implementation of regulation in Tryg through business procedures, provides ongoing training in compliance matters and performs compliance controls within the organisation. Compliance risks and the result of the performed compliance controls are reported to the Supervisory Board's Risk Committee.

Emerging risk

Emerging risk cover new risks or known risks, with changing characteristics. The management of this type of risk is handled in the individual business areas, which monitor the market and adapt the products as the conditions change. In the event of a change in insurance terms, it is ensured that Tryg's reinsurance cover is consistent with the new conditions.

Emerging risk is also a part of the systematically implemented risk identification process in Tryg.

Principal					SEK 700m		
Issue price					100		
Issue date					April 2018		
Maturity year					Perpetual		
Loan may be called by lender as from					2023		
Repayment profile					Interest-only		
Interest structure					2.5 % above STIBOR 3M		

The share of capital included in the calculation of the capital base totals DKK 2,739m (DKK 2,164m in 2017).

The loans are initially recognised at fair value on the date on which a loan is entered and subsequently measured at amortised cost.

The loans are taken by Tryg Forsikring A/S. The creditors have no option to call the loans before maturity or otherwise terminate the loan agreements. The loans are automatically accelerated upon the liquidation or bankruptcy of Tryg Forsikring A/S.

Prices used for determination of fair value in respect of the loans are based on actual traded prices from Bloomberg.

Description of segments

Please refer to the accounting principles for a description of operating segments.

Costs are allocated according to specific keys, which are believed to provide the best estimate of assessed resource consumption.

a) Amounts relating to eliminations and one-off items. Details of amounts in note 2 Geographical segments.

Other assets and liabilities are managed at Group level and are not allocated to the individual segments but are included under 'Other'.

- b)** Amounts relating to eliminations and one-off items. In 2018 cost, claims and other costs were negatively affected by DKK 75m, DKK 49m and DKK 76m. The costs are related to integration and transaction costs for the acquirement of Alka. In 2016 costs and claims were negatively affected by DKK 162m and DKK 88m respectively, mainly due to impairment of software. In 2015 costs and claims were negatively affected by DKK 80m and DKK 40m respectively due to provisioning for the efficiency programme.
- c)** Adjustment of gross expense ratio included only in 'Tryg'. The adjustment is explained in a footnote to Financial highlights.

Number of Matching shares exercisable 31 Dec. 2017	0	0	0	0				

In 2011-2018, Tryg entered into an agreement on matching shares for the Executive Board, Risk-takers and Other employees as a consequence of the Group's remuneration policy. Executive Board, Risk-takers and Other employees are allocated one share in Tryg A/S for each share they acquires in Tryg A/S at market rate for liquid cash at a contractually agreed sum over the 3- or 4-year maturation period.

In 2018, the reported fair value of matching shares for the Group amounted to DKK 7m (DKK 5m in 2017). At 31 December 2018, a total amount of DKK 29m was recognised for matching shares.

Conditional shares

In 2017 and 2018, Tryg allocated conditional shares in accordance with the Group's remuneration policy. The beneficiaries will receive shares in Tryg A/S if certain conditions are fulfilled over a 2 to 3 year vesting period. In 2018, the fair value of Conditional shares is prorated relative to the vesting period and recognised in the income statement amounted to DKK 3m (DKK 1m in 2017). The maximum obligation for Tryg is 100,776 shares in Tryg A/S.

Impairment test

Goodwill

The Value-in-use method is used when testing the Goodwill for impairment.

Primary assumptions for impairment test:

When assessing the cash flow management has based its estimates of premiums earned on the insurance portfolio adjusted to reflect the expected effect of business decisions and market development from past experiences. The portfolio is indexed with the wage and salary index. Claims incurred are based on expected claims ratios, which corresponds to current levels. Moderna is adjusted for weather and large-scale claims as well. Reinsurance is taken into account when looking at the overall technical result together with the expected cost ratio. Required returns are based on management's own requirements for returns of the individual cash generation units and are not expected to change significantly in the near future.

Alka

The impairment test at year-end for Alka is based on the valuation at the time of acquisition due to the short period of ownership, and lack of indications of impairment since closing. Goodwill recognised DKK 4,241m. Please refer to note 27.

Obos

In 2017, Tryg acquired OBOS' insurance portfolio. The insurance activities were incorporated into the Tryg Group's business structure from 1 June 2017.

Comprises the sale of insurance products to private and commercial customers under the 'Obos' brand.

At 31 December 2018, management performed an impairment test of the carrying amount of goodwill based on the allocation of the cost of goodwill to the cash-generating unit.

The asset and liabilities have not changed significantly since the acquisition, and the recoverable amount calculated would exceed the carrying amount with the same margin, or very close to that margin.

The impairment test shows a calculated value in use of approximately DKK 0.4bn (0.3bn) relative to a recognised goodwill of DKK 49m (51m) and Equity of DKK 0.2bn (0.2bn) and does not indicate any impairment in 2018. According to the sensitivity informations below a change in the required return rate will have the highest effect on the equity. An increase in the required return of approx. 7% will result in a write down of goodwill.

CAGR -1.0 percentage point (0-10 years)	-22	-14
Required return +1.0 percentage point	-55	-153
Required return -1.0 percentage point	52	193
Combined ratio +1.0 percentage point	-37	-142
Combined ratio -1.0 percentage point	37	143

Moderna

In 2016, Tryg acquired Skandia's child and adult accident insurance portfolio. The insurance activities were incorporated into the Tryg Group's business structure from 1 September 2016.

In 2014, Tryg acquired Securator A/S, Optimal Djurførsikring i Norr AB. The insurance activities were incorporated into the Tryg Group's business structure and merged into Tryg in 2015.

At 31 December 2018, management performed an impairment test of the carrying amount of goodwill based on the allocation of the cost of goodwill to the cash-generating unit. Moderna portfolio consists from 1 January 2017 of Moderna, Securator and Skandia, which was prior to this date three separate cash-generating units. The reasons behind the merger of Securator and Skandia into Moderna, is that they are managed together as part of the Swedish business and reported under the segment 'Sweden'.

Comprises the sale of insurance products to private customers under the 'Moderna' brand. Moreover, insurance is sold under the brands Atlantica, Bilsport & MC and Moderna Djurførsikringar. Sales take place through its own sales force, call centres and online.

The cash flows appearing from the latest prognosis approved by management for the next 6 quarters are used when calculating the value in use of Moderna. The cash flows in the latest budget period have been extrapolated for financial years after the budget periods (terminal period) and adjusted for expected growth rates determined on the basis of expectations for the general economic growth. The required return is based on an assessment of the risk profile of the tested business activities compared with the market's expectations for the Group.

The impairment test shows a calculated value in use of approximately DKK 1.7bn (1.2bn) relative to a recognised goodwill of DKK 0.5bn (0.5bn) and Equity of DKK 0.7bn (0.8bn) and does not indicate any impairment in 2018. According to the sensitivity informations below a change in the required return rate will have the highest effect on the equity. A increase in the required return of approx. 6% will result in a write down of goodwill.

Notes

Trademarks and customer relations		
As at 31 December 2018 management performed a test of the carrying amounts of customer relations as an integral part of the Obos portfolio goodwill test.		
The impairment test of the acquired agricultural portfolio is based on renewal and retention rates, which are on the expected level. The test did not indicate any impairment.		

DKKm
11 Intangible assets (continued)
Software and assets under construction
As at 31 December 2018 management performed a test of the carrying amounts of software and assets under construction.
The impairment test compares the carrying amount with the estimated present value of future cash flows. The test did indicate an impairment of DKK 26m (DKK 38m) due to revaluation of the groups it-systems. The write-down is due to the IT development cost being higher than the future cash flows. The cost is recognised as write-downs under depreciations in the income statement.
Assets under construction are not depreciated but tested once a year for impairment or when there is any indication of a decrease in value.
Software with a limited useful lifetime is amortised over 4 years using the straight-line method. Amortised software is assessed for impairment at the balance sheet date or when there are indications that the future cash flow cannot justify the carrying amount.
In the event that the recoverable amount is lower than the carrying amount, the difference is recognised in the income statement. The recoverable amount is the higher of fair value less sales costs and value in use.

15 Financial assets (Continued)

The Fair value hierarchy

Quoted market prices (level 1) consists of financial instruments that are quoted in an active market. Tryg uses the price quoted in the principal market.

Valuation based on observable input (level 2) consists of financial instruments that are valued substantially on the basis of observable input other than a quoted price for the instrument itself. If a financial instrument is quoted in a market that is not active, Tryg bases its measurement on the most recent transaction price. Adjustment is made for subsequent changes to market conditions, for instance, by including transactions in similar financial instruments that are assumed to be motivated by normal business considerations. For a number of financial assets and liabilities, no market exists. In such cases, Tryg uses recent transactions in similar instruments and discounted cash flows or other generally accepted estimation and valuation techniques based on market conditions at the balance sheet date to calculate an estimated value. This category covers instruments such as derivatives valued on the basis of observable yield curves and exchange rates and illiquid mortgage bonds valued by reference to the value of similar liquid bonds.

Valuation based on significant non-observable input (level 3): The valuation of certain financial instruments is based substantially on non-observable input. Such instruments include unlisted shares, unit trust investments and some unlisted bonds. The fair value of Investment property is also based on non-observable input. Please refer to note 13 and accounting policies section Investment property.

If, at the balance sheet date, a financial instrument's classification differs from its classification at the beginning of the year, the classification of the instrument changes. Changes are considered to have taken place at the balance sheet date. Developments in the financial markets can result in reclassifications between the categories. Some bonds have become illiquid and have therefore been moved from the Quoted prices to the Observable input category, while other bonds have become liquid and have been moved from the Observable input to the Quoted prices category.

20 Sensitivity information		
The sensitivity analysis is based on a change in one of the assumptions, assuming that all other assumptions remain constant. In reality, this is rarely the case, and changes to some assumptions may be subject to covariance. The sensitivity analysis has been carried out using the same method as the actuarial calculation of the pension provisions in the statement of financial position.		
<i>Impact on equity from the following changes:</i>		
Interest rate increase of 0.3 percentage point	49	46
Interest rate decrease of 0.3 percentage point	-52	-49

Pay increase rate, decrease of 1 percentage point	66	78
Turnover, increase of 2 percentage point	30	22
Turnover, decrease of 2 percentage point	-36	-26
Description of the Norwegian plan		
In the Norwegian part of the Group, about half of the employees have a defined-benefit pension plan. The plans are based on the employees' expected final pay, providing the members of the plan with a guaranteed level of pension benefits throughout their lives. The pension benefits are determined by the employees' term of employment and salary at the time of retiring. Employees having made contributions for a full period of contribution are guaranteed a pension corresponding to 66% of their final pay. As of 2014, pensions being disbursed are no longer regulated in step with the basic amount of old-age pension paid in Norway (G regulation), but are subject to a minimum regulation. The plan are closed for new business. Under the present defined-benefit plan, members earn a free policy entitlement comprising disability cover, spouse and cohabitant cover and children's pension.		
The pension funds are managed by Livsforsikringsselskapet Nordea Liv AS and regulated by local legislation and practice.		
Description of the Swedish plan		
Moderna Försäkringar, a branch of Tryg Forsikring A/S, complies with the Swedish industry pension agreement, the FTP plan, which is insured with Försäkringsbranschens Pensionskassa – FPK. Under the terms of the agreement, the Group's Swedish branch has undertaken, along with the other businesses in the collaboration, to pay the pensions of the individual employees in accordance with the applicable rules.		
The FTP plan is primarily a defined-benefit plan in terms of the future pension benefits. FPK is unable to provide sufficient information for the Group to use defined-benefit accounting. For this reason, the Group has accounted for the plan as if it were a defined-contribution plan in accordance with IAS 19.30. This years premium paid to FPK amounted to DKK 12m, which is about 1,9 % of the annual premium in FPK (2017). FPK writes in its interim report for 2018 that it had a collective consolidation ratio of 141 at 30 June 2018 (consolidation ratio of 140 at 30 June 2017). The collective consolidation ratio is defined as the fair value of the plan assets relative to the total collective pension obligations.

Contingent liabilities

Companies in the Tryg Group are party to a number of disputes.

Management believes that the outcome of these disputes will not affect the Group's financial position significantly beyond the obligations recognized in the statement of financial position at 31 December 2018.

Notes

DKKm

27 Acquisition of activities

2018

Alka

In December 2017 Tryg agreed to acquire Forsikrings-Aktieselskabet Alka (Alka). The transaction was approved as per 5 November 2018 with closing 8 November 2018, whereby Tryg acquired 100% of the shares in Alka and its subsidiaries. The acquisition affects the Financial statement from 8 November 2018. The result will be recognised under Private Denmark and Commercial Denmark.

FDM

Tryg acquired FDM's insurance portfolio at 1 January 2018. In October 2017, Tryg began selling insurance products to FDM's customers, and by 1 January 2018, all current customers had been transferred to Tryg. The result will be recognised under Private Denmark.

Troll

In February 2018 Tryg and Troll Forsikring made a declaration of intent whereby Tryg would acquire Troll Forsikring AS. The agreement meant that Tryg would acquire the production and distribution of the insurances sold to Troll's policyholders. The agreements was signed in February and the acquisition was approved by the Danish and Norwegian FSA in March 2018.

Net assets acquired	Alka	Troll	2018	OBOS 2017
Assets				
Intangible assets	1,429	0	1,429	51
Tangible assets	112	0	112	0
Financial assets	5,638	42	5,680	121
Total reinsurance of provisions	19	64	83	49
Receivables, other assets and accrued income	277	83	360	113
Liabilities				
Total provisions for insurance contracts	2,387	83	2,470	143
Debt and accruals and deferred income	852	54	906	74
Net assets acquired	4,236	52	4,288	117
hereof cash	145	42	187	13
Purchase price	8,477	55	8,532	168
Purchase price in cash	8,332	13	8,345	155
Goodwill	4,241	3	4,244	51

27 Acquisition of subsidiaries

The Group has incurred transaction and advisory costs of DKK 76m in connection with the acquisition. The purchase price is final. In connection with the acquisition, a sum was paid which exceeds the fair value of the identifiable acquired assets and total provisions for insurance contracts. This positive balance is mainly attributable to Brands, Customer relations and to expected synergies between the portfolios in the acquired activities and the Group's existing activities, which are not separately identifiable.

The Goodwill acquired is not tax deductible. Alka is included going forward from 8 November 2018, with a premium of approx. DKK 385m and a technical result of approx. DKK 60m. If the activities were included with a full year, the premium income would amount to approx. DKK 2.300m and the technical result would be approx. DKK 300m.

The determination of the pro forma amounts for premium income and technical result for the period is based on the following significant assumptions:

- Premiums and claims have been calculated on the basis of the fair values determined in the acquisition balance sheets for premium and claims provisions, rather than the original carrying amounts.
- Other costs, including amortisation of intangible assets, have been calculated on the basis of the fair values determined in the acquisition balance sheets, rather than the original carrying amounts.

2017

OBOS

In February 2017 Tryg and OBOS BLL signed an agreement whereby Tryg acquired OBOS' insurance activities and shares in OBOS Forsikring AS and integrated them into its Norwegian business. The acquisition affects the Financial statement from 1 June 2017:

If the activities were included with a full year, the premium income would amount to approx. DKK 140m and the technical result would be slightly negative. Management believes that through various actions, the earnings-level after the acquisition of the activities will be significantly increased, to a level more in line with other Tryg activities in Norway.

Fees are charges incurred during the financial year. Variable salary includes the charges for matching shares and conditional shares, which are recognised over 4 years. Reference is made to section 'Corporate governance' of the management's review on the corresponding disbursements. The Executive Board and risk-takers are included in incentive programmes. Please refer to note 6 for information concerning this.

The members of the Supervisory Board in Tryg A/S are paid with a fixed remuneration and are not covered by the incentive schemes.

The Executive Board is paid a fixed remuneration, car allowance and pension. The variable salary is awarded in the form of share based remuneration and cash, see 'Corporate governance'.

Each member of the Executive Board is entitled to 12 months' notice and severance pay equal to 12 months' salary plus pension contribution (Group CEO is entitled to severance pay equal to 18 months' salary). If a change of control clause is actioned CEO and COO are instead entitled to Severance pay equal to 36 months' salary and CFO to 24 months' salary and a notice period of 6 months.

Risk-takers are defined as employees whose activities have a significant influence on the company's risk profile. The Supervisory Board decides which employees should be considered to be risk-takers.

Parent company

TryghedsGruppen smba

TryghedsGruppen smba controls 60% of the shares in Tryg A/S.

2018

In 2018 Tryg Forsikring A/S paid Tryg A/S DKK 1,437m and Tryg A/S paid TryghedsGruppen smba DKK 1,788m in dividends. Further Tryg A/S also made a capital contribution of DKK 2,000m to Tryg Forsikring. In 2018, TryghedsGruppen smba has invested DKKm 313 in 'Kapitalforeningen Tryg Invest'. The amount is recognised under Other Financial investment assets and Debt to Group undertakings.

2017

Tryg transferred DKK 40m to TryghedsGruppen regarding commitment fee related to capital increase in december 2017. The transactions between TryghedsGruppen smba and Tryg A/S is conducted on an arm's length basis.

Intra-group transactions

Administration fee, etc. is fixed on a cost-recovery basis. Intra-group accounts are offset and carry interest on market terms. The companies in the Tryg Group have entered into reinsurance contracts on market terms. Transactions with Group undertakings have been eliminated in the consolidated financial statements in accordance with the accounting policies.

DKKm

29 Financial highlights

Please refer to page 54.

Notes

30 Accounting policies

The consolidated financial statements are prepared in accordance with the International Financial Reporting Standards (IFRS) as per adopted by the EU on 31 December 2018 and in accordance with the Danish Statutory Order on Adoption of IFRS.

The annual report of the parent company is prepared in accordance with the executive order on financial reports presented by insurance companies and lateral pension funds issued by the Danish FSA. The deviations from the recognition and measurement requirements of IFRS are:

- The Danish FSA's executive order does not allow provisions for deferred tax of contingency reserves allocated from untaxed funds. Deferred tax and the other comprehensive income of the parent company have been adjusted accordingly on the transition to IFRS.

Change in accounting policies

IFRS 16, Leases

Tryg has implemented IFRS 16 one year ahead of its effective date and will consequently recognise lease assets (Right of Use-asset) and lease liabilities in the balance sheet. The implementation of IFRS 16 has no significant impact on either profit or loss or equity. Lease assets recognised comprise 'Group-occupied property' and 'Operating equipment'. Lease liabilities are recognised in the line item 'Other debt'. Early application of IFRS 16 is only possible because Tryg also applies IFRS 15 'Revenue from Contracts with Customers', however applying IFRS 15 have no significant impact on the statement of financial position or profit or loss due to the fact that our income is primarily related to premiums accounted for under IFRS 4. Tryg has elected not to implement regarding intangibles, short term and low value lease contracts. The total impact on the balance sheet 1 January 2018, using the modified retrospective approach was;

Assets

Total property, plant and equipment	789
Total assets	789

Equity and liabilities

Total debt	789
Total equity and liabilities	789

In addition please see note 24.

As a consequence of applying the modified retrospective approach comparative figures has not been restated.

Other

Going forward from 01.01.2018 Tryg has classified depreciation related to some intangible assets, such as customer relationship and distribution. The reclassification has not affected Profit and Loss or Equity but depreciation related to said items will be presented in the line item 'other costs' instead of the line item 'Acquisition costs and administration expenses' where they were previously presented.

Comparative figures have not been restated due to immateriality.

Except as noted above, the accounting policies have been applied consistently with last year.

Accounting regulation

Implementation of changes to accounting standard and interpretation in 2018

The International Accounting Standards Board (IASB) has issued several changes to the international accounting standards, and the International Financial Reporting Interpretations Committee (IFRIC) has also issued a number of interpretations.

No standards or interpretations have been implemented for the first time for the accounting year that began on 1st January 2018 that will have a significant impact on the group. See below regarding IFRS 9 'Financial instruments'

There has not been implemented any new or amended standards and interpretations that have affected the group significantly.

Future orders, standards and interpretations that the group has not implemented and which have still not entered into force but could affect the group significantly:

- IFRS 9 'Financial Instruments' ^{a)}
- IFRS 17 'Insurance Contracts' ^{b)}

^{a)} enters into force for the accounting year commencing 1 January 2018 – Insurance companies are allowed to postpone the implementation to 1 January 2022 if certain criteria are met.

^{b)} enters into force for the accounting year commencing 1 January 2022.

The implementation of IFRS 9 'financial instruments' is not expected to significantly change the group's financial position.

Regarding IFRS 9 the assessment of no significant impact on the statement of financial position or profit and loss is based on the assumption that Tryg already carry all financial instruments at fair value through profit and loss. The implementation of IFRS 9, will not effect Tryg's recognition and measurement. Tryg has postponed the implementation of IFRS 9 to 1 January 2022 when IFRS 17 Insurance Contracts will be applicable. Tryg can postpone IFRS 9 due to the fact that our activities are predominantly connected with insurance and that our liabilities connected with insurance is relatively greater than 80 per cent of the total liabilities. The impact of IFRS 17 is currently being assessed and is expected to be concluded in due course in time of the implementation date.

The changes will be implemented going forward from the effective date.

Significant accounting estimates and assessments

The preparation of financial statements under IFRS requires the use of certain critical accounting estimates and requires management to exercise its judgement in the process of applying the Group's accounting policies. The areas involving a higher degree of judgement or complexity, or areas where assumptions and estimates are significant to the consolidated financial statements are:

- Liabilities under insurance contracts
- Valuation of defined benefit plans
- Fair value of financial assets and liabilities
- Valuation of property
- Business Combinations
- Measurement of goodwill, Trademarks and Customer relations
- Control of subsidiaries

Liabilities under insurance contracts

Estimates of provisions for insurance contracts represent the Group's most critical accounting estimates, as these provisions involve several uncertainty factors.

Claims provisions are management's best estimate based on actuarial and statistical projections of claims and administration of claims including a margin incorporating the uncertainty related to the range of actuarial scenarios and other short and long-term risks not reflected in standard actuarial models. The projections are based on Tryg's knowledge of historical developments, payment patterns, reporting delays, duration of the claims settlement process and other factors that might influence future developments in the liabilities.

The Group makes claims provisions, in addition to provisions for known claims, which cover estimated compensation for losses that has incurred, but are not yet reported to the Group (known as IBNR reserves) and future developments in claims which are known to the

Notes

Group but are not finally settled. Claims provisions also include direct and indirect claims settlement costs or loss adjustment expenses that arise from events that have occurred up to the statement of financial position date even if they have not yet been reported to Tryg.

The calculation of the claims provisions is therefore inherently uncertain and, by necessity, relies upon the making of certain assumptions as regards factors such as court decisions, amendments to legislation, social inflation and other economic trends, including inflation. The Group's actual liability for losses may therefore be subject to material positive or negative deviations relative to the initially estimated claims provisions.

Claims provisions are discounted. As a result, initial changes in discount rates or changes in the duration of the claims provisions could have positive or negative effects on earnings. Discounting affects the motor third-party liability, general third-party liability, workers' compensation classes, including sickness and personal accidents, in particular.

The Financial Supervisory Authority's discount curve, which is based on Eiopa's yield curves, is used to discount Danish, Norwegian and Swedish claims provisions in relation to the relevant functional currencies.

Several assumptions and estimates underlying the calculation of the claims provisions are mutually dependent. This has the greatest impact on assumptions regarding interest rates and inflation.

Defined benefit pension schemes

The Group operates a defined-benefit plan in Norway. A defined-benefit plan is a pension plan that defines an amount of pension benefit that an employee will receive on retirement, depending on age, years of service and salary.

The net obligation with respect to the defined-benefit plan is based on actuarial calculations involving a number of assumptions. The assumptions include discount interest rate, expected future salary and pension adjustments, turnover, mortality and disability.

Fair value of financial assets and liabilities

Measurements of financial assets and liabilities for which prices are quoted in an active market or which are based on generally accepted models with observable market data are not subject to material estimates. For securities that are not listed on a stock exchange, or for which no stock exchange price is quoted that reflects the fair value of the instrument, the fair value is determined using a current OTC price of a similar financial instrument or using a model calculation. The valuation models include the discounting of the instrument cash flow using an appropriate market interest rate with due consideration for credit and liquidity premiums.

Valuation of property

Property is divided into owner-occupied property and investment property. The fair value is calculated based on a market-determined rental income, as well as operating expenses in proportion to the property's required rate of return in per cent. Investment property is recognised at fair value. The calculation of fair value is based on market prices, taking into consideration the type of property, location and maintenance standard, and based on a market-determined rental income as well as operating expenses in proportion to the property's required rate of return. **Cf. note 12, 13 and 15.**

Business Combinations

In Business Combinations, significant assessments are made when considering the fair value of the assets required and liabilities assumed and when identifying intangible assets, such as Trademarks, Customer relations and goodwill as part of the transactions.

Measurement of goodwill, Trademarks and Customer relations

Goodwill, Trademarks and customer relations was acquired in connection with acquisition of businesses. Goodwill is allocated to the cash-generating units under which management manages the investment. The carrying amount is tested for impairment at least annually. Impairment testing involves estimates of future cash flows and is affected by several factors, including discount rates and other circumstances dependent on economic trends, such as customer behaviour and competition. **Cf. note 11.**

Control of subsidiaries

Control of subsidiaries is assessed yearly. Hence whether a subsidiary should still be part of the consolidation on line by line basis or as a single line item in the balance sheet.

Description of accounting policies

Recognition and measurement

The annual report has been prepared under the historical cost convention, as modified by the revaluation of owner-occupied property, where increases are recognised in other comprehensive income, and revaluation of investment property, financial assets held for trading and financial assets and financial liabilities (including derivative instruments) at fair value in the income statement.

Assets are recognised in the statement of financial position when it is probable that future economic benefits will flow to the Group, and the value of such assets can be measured reliably. Liabilities are recognised in the statement of financial position when the Group has a legal or constructive obligation as a result of a prior event, and it is probable that future economic benefits will flow out of the Group, and the value of such liabilities can be measured reliably.

On initial recognition, assets and liabilities are measured at cost, with the exception of financial assets, which are recognised at fair value. Measurement subsequent to initial recognition is effected as described below for each item. Anticipated risks and losses that arise before the time of presentation of the annual report and that confirm or invalidate affairs and conditions existing at the statement of financial position date are considered at recognition and measurement.

Income is recognised in the income statement as earned, whereas costs are recognised by the amounts attributable to this financial year. Value adjustments of financial assets and liabilities are recognised in the income statement unless otherwise described below.

All amounts in the notes are shown in millions of DKK, unless otherwise stated.

Consolidation

Consolidated financial statements

The consolidated financial statements comprise the financial statements of Tryg A/S (the parent company) and the enterprises (subsidiaries) controlled by the parent company. The parent company is regarded as controlling an enterprise when it

- exercises a controlling influence over the relevant activities in the enterprise in question,
- is exposed to or has the right to a variable return on its investment, and
- can exercise its controlling influence to affect the variable return.

Enterprises in which the Group directly or indirectly holds between 20% and 50% of the voting rights and exercises significant influence but no controlling influence are classified as associates.

Notes

Basis of consolidation

The consolidated financial statements are prepared on the basis of the financial statements of Tryg A/S and its subsidiaries. The consolidated financial statements are prepared by combining items of a uniform nature. The financial statements used for the consolidation are prepared in accordance with the Group's accounting policies.

On consolidation, intra-group income and costs, intra-group accounts and dividends, and gains and losses arising on transactions between the consolidated enterprises are eliminated.

Items of subsidiaries are fully recognised in the consolidated financial statements.

Business combinations

Newly acquired or newly established enterprises are recognised in the consolidated financial statements from the date of acquisition and the date of formation, respectively. The date of acquisition is the date on which control of the acquired enterprise actually passes to Tryg. Divested or discontinued enterprises are recognised in the consolidated statement of comprehensive income up to the date of disposal or the settlement date. The date of disposal is the date on which control of the divested enterprise actually passes to a third party.

The purchase method is applied for new acquisitions if the Group gains control of the acquired enterprise. Subsequently, identifiable assets, liabilities and contingent liabilities in the acquired enterprises are measured at fair value at the date of acquisition. Non-current assets which are acquired with the intention of selling them are, however, measured at fair value less expected selling costs. Restructuring costs are recognised in the pre-acquisition balance sheet only if they constitute an obligation for the acquired enterprise. The tax effect of revaluations is taken into account. The acquisition price of an enterprise consists of the fair value of the price paid for the acquired

enterprise. If the final determination of the price is conditional upon one or more future events, such events are recognised at their fair values at the date of acquisition. Costs relating to the acquisition are recognised in the income statement as incurred.

Any positive balances (goodwill) between the acquisition price of the acquired enterprise, the value of minority interests in the acquired enterprise and the fair value of previously acquired equity investments, on the one hand, and the fair value of the acquired assets, liabilities and contingent liabilities, on the other hand, are recognised as an asset under intangible assets, and are tested for impairment at least once a year. If the carrying amount of the asset exceeds its recoverable amount, it is impaired to the lower recoverable amount.

In the event of negative balances (negative goodwill), the calculated fair values, the calculated acquisition price of the enterprise, the value of minority interests in the acquired enterprise and the fair value of previously acquired equity investments are revalued. If the balance is still negative, the amount is recognised as income in the income statement.

If, at the date of acquisition, there is uncertainty as to the identification or measurement of acquired assets, liabilities or contingent liabilities or the determination of the acquisition price, initial recognition is based on a preliminary determination of values. The preliminarily determined values may be adjusted or additional assets or liabilities may be recognised up to 12 months after the acquisition, provided that new information has come to light regarding matters existing at the date of acquisition which would have affected the determination of the values at the date of acquisition, had such information been known.

Generally, subsequent changes in estimates of conditional acquisition prices are recognised directly in the income statement.

Currency translation

A functional currency is determined for each of the reporting entities in the Group. The functional currency is the currency used in the primary economic environment in which the reporting entity operates. Transactions in currencies other than the functional currency are transactions in foreign currencies.

On initial recognition, transactions in foreign currencies are translated into the functional currency using the exchange rate applicable at the transaction date. Assets and liabilities denominated in foreign currencies are translated using the exchange rates applicable at the statement of financial position date. Translation differences are recognised in the income statement under price adjustments.

On consolidation, the assets and liabilities of the Group's foreign operations are translated using the exchange rates applicable at the statement of financial position date. Income and expense items are translated using the average exchange rates for the period. Exchange rate differences arising on translation are classified as other comprehensive income and transferred to the Group's translation reserve. Such translation differences are recognised as income or as expenses in the period in which the activities are divested. All other foreign currency translation gains and losses are recognised in the income statement.

The presentation currency in the annual report is DKK.

Segment reporting

Segment information is based on the Group's management and internal financial reporting system and supports the management decisions on allocation of resources and assessment of the Group's results divided into segments.

The operational business segments in Tryg are Private, Commercial, Corporate and Sweden. Private encompasses the sale of insurances to private individuals in

Denmark and Norway. Commercial encompasses the sale of insurances to small and medium sized businesses, in Denmark and Norway. Corporate sells insurances to industrial clients primarily in Denmark, Norway and Sweden. In addition, Corporate handles all business involving brokers. Sweden encompasses the sale of insurance products to private individuals in Sweden as well as sale of Product insurances in the Nordic region.

Geographical information is presented on the basis of the economic environment in which the Tryg Group operates. The geographical areas are Denmark, Norway and Sweden.

Segment income and segment costs as well as segment assets and liabilities comprise those items that can be directly attributed to each individual segment and those items that can be allocated to the individual segments on a reliable basis. Unallocated items primarily comprise assets and liabilities concerning investment activity managed at Group level.

Key ratios

Earnings per share (EPS) are calculated according to IAS 33. This and other key ratios are calculated in accordance with Recommendations and Ratios issued by the The Danish Finance Society and the Executive Order on Financial Reports for Insurance Companies and Multi-Employer Occupational Pension Funds issued by the Danish Financial Supervisory Authority.

Income statement

Premiums

Premium income represents gross premiums written during the year, net of reinsurance premiums and adjusted for changes in premium provisions, corresponding to an accrual of premiums to the risk period of the policies, and in the reinsurers' share of the premium provisions.

Premiums are calculated as premium income in accordance with the risk exposure over the cover period, calculated separately for each individual insurance

Notes

contract. The calculation is generally based on the pro rata method, although this is adjusted for an unevenly divided risk between lines of business with strong seasonal variations or for policies lasting many years.

The portion of premiums received on contracts that relate to unexpired risks at the statement of financial position date is reported under premium provisions.

The portion of premiums paid to reinsurers that relate to unexpired risks at the statement of financial position date is reported as the reinsurers' share of premium provisions.

Technical interest

According to the Danish FSA's executive order, technical interest is presented as a calculated return on the year's average insurance liability provisions, net of reinsurance. The calculated interest return for grouped classes of risks is calculated as the monthly average provision plus an actual interest from the present yield curve for each individual group of risks. The interest is applied according to the expected run-off pattern of the provisions.

Insurance technical interest is reduced by the portion of the increase in net provisions that relates to unwinding.

Claims

Claims are claims paid during the year and adjusted for changes in claims provisions less the reinsurers' share. In addition, the item includes run-off gains/losses in respect of previous years. The portion of the increase in provisions which can be ascribed to unwinding is transferred to insurance technical interest.

Claims are shown inclusive of direct and indirect claims handling costs, including costs of inspecting and assessing claims, costs to combat and mitigate damage and other direct and indirect costs associated with the handling of claims incurred.

Changes in claims provisions due to changes in yield curve and exchange rates are recognised as a price adjustment. Tryg hedges the risk of changes in future pay and price figures for provisions for workers' compensation. Tryg uses zero coupon inflation swaps acquired with a view to hedging the inflation risk. Value adjustments of these swaps are included in claims, thereby reducing the effect of changes to inflation expectations under claims.

Bonus and premium discounts

Bonus and premium discounts represent anticipated and refunded premiums to policyholders, where the amount refunded depends on the claims record, and for which the criteria for payment have been defined prior to the financial year or when the insurance was taken out.

Insurance operating expenses

Insurance operating costs represent acquisition costs and administration expenses less reinsurance commissions received. Expenses relating to acquiring and renewing the insurance portfolio are recognised at the time of writing the business. Underwriting commission is recognised when a legal obligation occurs. Administration expenses are all other expenses attributable to the administration of the insurance portfolio. Administration expenses are accrued to match the financial year.

Share-based payment

The Tryg Group's incentive programmes comprise share option programmes, employee shares and matching shares.

Employee shares

According to established rules, the Group's employees can be granted a bonus in the form of employee shares. When the bonus is granted, employees can choose between receiving shares or cash. The expected value of the shares will be expensed over the vesting period. The scheme will be treated as a complex financial instrument, consisting of the right to cash settlement

and the right to request delivery of shares. The difference between the value of shares and the cash payment is recognised in equity and is not remeasured. The remainder is treated as a liability and is remeasured until the time of exercise, such that the total recognition is based on the actual number of shares or the actual cash amount.

Matching shares

Members of Executive Board and other senior employees have been allocated shares in accordance with the 'Matching shares' scheme. Under Matching shares, the individual Executive Board member or other senior employee is allocated one share in Tryg A/S for each share he or she acquires in Tryg A/S at the market rate for certain liquid cash at a contractually agreed sum in connection with the Matching share programme.

The holder acquires the shares in the open window following publication of the annual report for the previous year. The shares (matching shares) are provided free of charge, three or four years after the time of purchase of the investment Shares. The holder may not sell the shares until six months after the matching time.

The shares are recognised at market value and are accrued over the four and tree year maturation period, based on the market price at the time of acquisition. Recognition is from the end of the month of acquisition under staff expenses with a balancing entry directly in equity. If the holder retires during the maturation period but remains entitled to shares, the remaining expense is recognised in the current accounting year.

Investment activities

Income from associates includes the Group's share of the associates' net profit.

Income from investment properties before fair value adjustment represents the profit from property operations less property management expenses.

Interest and dividends represent interest earned and dividends received during the financial year. Realised and unrealised investment gains and losses, including gains and losses on derivative financial instruments, value adjustment of investment property, foreign currency translation adjustments and the effect of movements in the yield curve used for discounting, are recognised as value adjustments.

Investment management charges represent expenses relating to the management of investments including salary and management fees on the investment area.

Other income and expenses

Other income and expenses include income and expenses which cannot be ascribed to the Group's insurance portfolio or investment assets, including the sale of products for Velliv, Pension & Livsforsikring A/S and depreciations of intangibles assets identified in Business combinations.

Discontinued and divested business

Discontinued and divested business is consolidated in one item in the income statement. Discontinued and divested business includes gross premiums, gross claims, gross costs, profit/loss on ceded business, insurance technical interest net of reinsurance, investment return after insurance technical interest, other income and costs and tax in respect of the discontinued business. Any reversal of earlier impairment is recognised under other income and costs.

The statement of financial position items concerning discontinued activities are reported unchanged under the respective entries whereas assets and liabilities concerning divested activities are consolidated under one item as assets held for sale and liabilities held for sale.

The comparative figures, including five-year financial highlights and key ratios, have been restated to reflect discontinued

Notes

tinued business. Discontinued and divested business in the income statement includes the profit/loss after tax of the run-off for the marine hull business and the divested activities in the Finnish branch. Discontinued business also comprises the Tryg Forsikring A/S run-off business.

Statement of financial position

Intangible assets

Goodwill

Goodwill was acquired in connection with acquisition of business. Goodwill is calculated as the difference between the cost of the undertaking and the fair value of acquired identifiable assets, liabilities and contingent liabilities at the time of acquisition. Goodwill is allocated to the cash-generating units under which management manages the investment and is recognised under intangible assets. Goodwill is not amortised but is tested for impairment at least once per year.

Trademarks and customer relations

Trademarks and customer relations have been identified as intangible assets on acquisition. The intangible assets are recognised at fair value at the time of acquisition and amortised on a straight-line basis over the expected economic lifetime of 5–15 years.

Software

Acquired computer software licences are capitalised on the basis of the costs incidental to acquiring and bringing to use the specific software. The costs are amortised based on an estimated economic lifetime of up to 4 years.

Costs for group developed software that are directly connected with the production of identifiable and unique software products, where there is sufficient certainty that future earnings will exceed the costs in more than one year, are reported as intangible assets. Direct costs include personnel costs for software development and directly attributable relevant fixed costs. All other costs connected with the development or maintenance of software are continuously charged as expenses.

After completion of the development work, the asset is amortised according to the straight-line method over the assessed economic lifetime, though over a maximum of 4 years. The amortisation basis is reduced by any impairment and write-downs.

Assets under construction

Group-developed intangibles are recorded under the entry 'Assets under construction' until they are put into use, whereupon they are reclassified as software and are amortized in accordance with the amortization periods stated above.

Fixed assets

Operating equipment

Fixtures and operating equipment are measured at cost less accumulated depreciation and any accumulated impairment losses. Cost encompasses the purchase price and costs directly attributable to the acquisition of the relevant assets until the time when such assets are ready to be brought into use.

Depreciation of operating equipment is calculated using the straight-line method over its estimated economic lifetime as follows:

- IT, 4-8 years
- Vehicles, 5 years
- Furniture, fittings and equipment, 5-10 years

Leasehold improvements are depreciated over the expected economic lifetime, however maximally the term of the lease.

Gains and losses on disposals and retired assets are determined by comparing proceeds with carrying amounts. Gains and losses are recognised in the income statement. When revalued assets are sold, the amounts included in the revaluation reserves are transferred to retained earnings.

Leasing

Right-of-use assets

At inception of a contract, Tryg assesses whether a contract is, or contains, a lease. It has the following prerequisites:

- The underlying asset is identifiable
- The group has the right to obtain substantially all the economic benefits from use of the asset throughout the period of use
- The group has the right to direct the use of the asset

Tryg recognises a right-of-use asset and a corresponding lease liability with respect to all lease agreements in which it is the lessee, excluding short-term leases (defined as leases with a lease term of 12 months or less) and leases of low value assets.

At inception or on reassessment of a contract that contains lease components, Tryg allocates the consideration in the contract to each lease component based on their relative stand-alone prices.

Right-of-use asset (ROU asset) and lease liability are recognised at the lease commencement date. The ROU asset is initially measured the cost, which comprises the initial amount of the lease liability adjusted for

- lease payments made at or before the commencement date
- any initial direct cost incurred
- estimate of costs to dismantle and remove the underlying asset or to restore the underlying asset
- lease incentives received

ROU assets are tested for impairment.

Lease liability

The lease liability is initially measured at the present value of the lease payments that are not paid at the commencement date, discounted by using the rate implicit in the lease. If this rate cannot be readily determined, Tryg uses its incremental borrowing rate. Subsequently, the

lease liability is measured at amortised cost using the effective interest method and is presented as part of other debt. It is remeasured when there is a change in future lease payments. A corresponding adjustment is made to the carrying amount of the ROU asset.

Land and buildings

Land and buildings are divided into owner-occupied property and investment property. The Group's owner-occupied properties consist of an office building in Høje Taastrup and a small number of summer house. The remaining properties are classified as investment property.

Owner-occupied property

Owner-occupied property is property that is used in the Group's operations. Owner-occupied properties are measured in the statement of financial position at their revalued amounts, being the fair value at the date of revaluation, less any subsequent accumulated depreciation and impairment losses. Revaluations are performed regularly to avoid material differences between the carrying amounts and fair values of owner-occupied property at the statement of financial position date. The fair value is calculated based on market-specific rental income per property and typical operating expenses for the coming year. The resulting operating income is divided by the required return on the property in per cent, which is adjusted to reflect market interest rates and property characteristics, corresponding to the present value of a perpetual annuity.

Increases in the revalued carrying amounts of owner-occupied property are recognised in the revaluation reserve in equity. Decreases that offset previous revaluations of the same asset are charged against the revaluation reserves directly in equity; all other decreases are charged to the income statement.

Costs are included in the asset's carrying amount or recognised as a separate asset, as appropriate, when it is probable that future economic benefits associated with the

Notes

item will flow to the Group, and the cost of the item can be measured reliably. Ordinary repair and maintenance costs are expensed in the income statement when incurred.

Depreciation on owner-occupied property is calculated based on the straight-line method and using an estimated economic lifetime of up to 50 years. Land is not depreciated.

Investment property

Properties held for renting yields that are not occupied by the Group are classified as investment properties.

Investment property is recognised at fair value. Fair value is based on market prices, adjusted for any differences in the nature, location or maintenance condition of specific assets. If this information is not available, the Group uses alternative valuation methods such as discounted cash flow projections and recent prices in the market.

The fair value is calculated on the basis of market-specific rental income per property and typical operating expenses for the coming year. The resulting operating income is divided by the required return on the property in per cent, which is adjusted to reflect market interest rates and property characteristics, corresponding to the present value of a perpetual annuity. The value is subsequently adjusted with the value in use of the return on prepayments and deposits and adjustments for specific property issues such as vacant premises or special tenant terms and conditions. **Cf. note 15 and 13.**

Changes in fair values are recorded in the income statement.

Impairment test for intangible assets, property and operating equipment

Operating equipment and intangible assets are assessed at least once per year to ensure that the depreciation method and the depreciation period that is used are connected to the expected economic lifetime. This also

applies to the salvage value. Write-down is performed if impairment has been demonstrated.

Goodwill is tested annually for impairment, or more often if there are indications of impairment, and impairment testing is performed for each cash-generating unit to which the asset belongs. The present value is normally established using budgeted cash flows based on business plans. The business plans are based on past experience and expected market developments.

Equity investments in Group undertakings

The parent company's equity investments in subsidiaries are recognised and measured using the equity method. The parent company's share of the enterprises' profits or losses after elimination of unrealised intra-group profits and losses is recognised in the income statement. In the statement of financial position, equity investments are measured at the pro rata share of the enterprises' equity.

Subsidiaries with a negative net asset value are recognised at zero value. Any receivables from these enterprises are written down by the parent company's share of such negative net asset value where the receivables are deemed irrecoverable. If the negative net asset value exceeds the amount receivable, the remaining amount is recognised under provisions if the parent company has a legal or constructive obligation to cover the liabilities of the relevant enterprise.

Net revaluation of equity investments in subsidiaries is taken to reserve for net revaluation under equity if the carrying amount exceeds cost.

The results of foreign subsidiaries are based on translation of the items in the income statement using average exchange rates for the period unless they deviate significantly from the transaction day exchange rates. Income and costs in domestic enterprises denominated in foreign currencies are translated using the exchange rates applicable on the transaction date.

Statement of financial position items of foreign subsidiaries are translated using the exchange rates applicable at the statement of financial position date.

When it is assessed that the parent company no longer has control over the subsidiary, it will be transferred to either assets held for sale or unquoted shares and when sold, it will be derecognised.

Equity investments in associates

Associates are enterprises in which the Group has significant influence but not control, generally in the form of an ownership interest of between 20% and 50% of the voting rights. Equity investments in associates are measured using the equity method so that the carrying amount of the investment represents the Group's proportionate share of the enterprises' net assets.

Profit after tax from equity investments in associates is included as a separate line in the income statement. Income is made up after elimination of unrealised intra-group profits and losses.

Associates with a negative net asset value are measured at zero value. If the Group has a legal or constructive obligation to cover the associate's negative balance, such obligation is recognised under liabilities.

Investments

Investments include financial assets at fair value which are recognised in the income statement. The classification depends on the purpose for which the investments were acquired. Management determines the classification of its investments on initial recognition and re-evaluates this at every reporting date.

Financial assets measured at fair value with recognition of value adjustments in the income statement comprise assets that form part of a trading portfolio and financial assets designated at fair value with value adjustment via the income statement.

Financial assets at fair value recognised in income statement

Financial assets are recognised at fair value on initial recognition if they are entered in a portfolio that is managed in accordance with fair value. Derivative financial instruments are similarly classified as financial assets held for sale, unless they are classified as security.

Realised and unrealised profits and losses that may arise because of changes in the fair value for the category financial assets at fair value are recognised in the income statement in the period in which they arise.

Financial assets are derecognised when the rights to receive cash flows from the financial assets have expired, or if they have been transferred, and the Group has also transferred substantially all risks and rewards of ownership. Financial assets are recognised and derecognised on a trade date basis, the date on which the Group commits to purchase or sell the asset.

The fair values of quoted securities are based on stock exchange prices at the statement of financial position date. For securities that are not listed on a stock exchange, or for which no stock exchange price is quoted that reflects the fair value of the instrument, the fair value is determined using valuation techniques. These include the use of similar recent arm's length transactions, reference to other similar instruments or discounted cash flow analysis.

Derivative financial instruments and hedge accounting

The Group's activities expose it to financial risks, including changes in share prices, foreign exchange rates, interest rates and inflation. Forward exchange contracts and currency swaps are used for currency hedging of portfolios of shares, bonds, hedging of foreign entities and insurance statement of financial position items. Interest rate derivatives in the form of futures, forward contracts, repos, swaps and FRAs are used to manage cash flows and interest rate risks related to the portfolio

Notes

of bonds and insurance provisions. Share derivatives in the form of futures and options are used from time to time to adjust share exposures.

Derivative financial instruments are reported from the trading date and are measured in the statement of financial position at fair value. Positive fair values of derivatives are recognised as derivative financial instruments under assets. Negative fair values of derivatives are recognised under derivative financial instruments under liabilities. Positive and negative values are only offset when the company is entitled or intends to make net settlement of more financial instruments.

Calculation of value is generally performed based on rates supplied by Danske Bank with relevant information providers and is checked by the Group's valuation technicians. Discounting based on market interest rates is applied in the case of derivative financial instruments involving an expected future cash flow.

Recognition of the resulting gain or loss depends on whether the derivative is designated as a hedging instrument and, if so, the nature of the item being hedged. The Group designates certain derivatives as hedges of investments in foreign entities. Changes in the fair value of derivatives that are designated and qualify as net investment hedges in foreign entities and which provide effective currency hedging of the net investment are recognised in other comprehensive income. The net asset value of the foreign entities estimated at the beginning of the financial year is hedged 90-100% by entering into short-term forward exchange contracts according to the requirements of hedge accounting. Changes in the fair value relating to the ineffective portion are recognised in the income statement. Gains and losses accumulated in equity are included in the income statement on disposal of the foreign entity.

Reinsurers' share of provisions for insurance contracts

Contracts entered into by the Group with reinsurers under which the Group is compensated for losses on

one or more contracts issued by the Group and that meet the classification requirements for insurance contracts are classified as reinsurers' share of provisions for insurance contracts. Contracts that do not meet these classification requirements are classified as financial assets.

The benefits to which the Group is entitled under its reinsurance contracts held are recognised as assets and reported as reinsurers' share of provisions for insurance contracts.

Amounts receivable from reinsurers are measured consistently with the amounts associated with the reinsured insurance contracts and in accordance with the terms of each reinsurance contract.

Changes due to unwinding are recognised in insurance technical interest. Changes due to changes in the yield curve or foreign exchange rates are recognised as price adjustments.

The Group continuously assesses its reinsurance assets for impairment. If there is objective evidence that the reinsurance asset is impaired, the Group reduces the carrying amount of the reinsurance asset to its recoverable amount. Impairment losses are recognised in the income statement.

Receivables

Total receivables comprise accounts receivable from policyholders and insurance companies as well as other accounts receivable. Other receivables primarily contain accounts receivable in connection with property.

Receivables that arise because of insurance contracts are classified in this category and are reviewed for impairment as a part of the impairment test of accounts receivable.

Receivables are recognised initially at fair value and are subsequently assessed at amortised cost. The income statement includes an estimated reservation for expected unobtainable sums when there is a clear indication of as-

set impairment. The reservation entered is assessed as the difference between the carrying amount of an asset and the present value of expected future cash flows.

Other assets

Other assets include current tax assets and cash at bank and in hand. Current tax assets are receivables concerning tax for the year adjusted for on-account payments and any prior-year adjustments. Cash at bank and in hand is recognised at nominal value at the statement of financial position date.

Prepayments and accrued income

Prepayments include expenses paid in respect of subsequent financial years and interest receivable. Accrued underwriting commission relating to the sale of insurance products is also included.

Equity

Share capital

Shares are classified as equity when there is no obligation to transfer cash or other assets. Costs directly attributable to the issue of equity instruments are shown in equity as a deduction from the proceeds, net of tax.

Revaluation reserves

Revaluation of owner-occupied property is recognised in other comprehensive income unless the revaluation offsets a previous impairment loss.

Foreign currency translation reserve

Assets and liabilities of foreign entities are recognised using the exchange rate applicable at the statement of financial position date. Income and expense items are recognised using the average monthly exchange rates for the period. Any resulting differences are recognised in Other comprehensive income. When an entity is wound up, the balance is transferred to the income statement. The hedging of the currency risk in respect of foreign entities is also offset in other comprehensive income in respect of the part that concerns the hedge.

Contingency fund reserves

Contingency fund reserves are recognised as part of retained earnings under equity. The reserves may only be used when so permitted by the Danish Financial Supervisory Authority and when it is for the benefit of the policyholders. The Norwegian contingency fund reserves include provisions for the Norwegian Natural Perils Pool and security reserve. The Danish and Swedish provisions comprise contingency fund provisions. Deferred tax on the Norwegian and Swedish contingency fund reserves is allocated.

Dividends

Proposed dividend is recognised as a liability at the time of adoption by the shareholders at the annual general meeting (date of declaration).

Own shares

The purchase and sale sums of own shares and dividends thereon are taken directly to retained earnings under equity. Own shares include shares acquired for incentive programmes and share buyback programme.

Proceeds from the sale of own shares in connection with the exercise of share options or matching shares are taken directly to equity.

Subordinate loan capital

Subordinate loan capital is recognised initially at fair value, net of transaction costs incurred. Subordinate loan capital is subsequently stated at amortised cost; any difference between the proceeds (net of transaction costs) and the redemption value is recognised in the income statement over the borrowing period using the effective interest method.

Provisions for insurance contracts

Premiums written are recognised in the income statement (premium income) proportionally over the period of coverage and, where necessary, adjusted to reflect any time variation of the risk. The portion of premiums received on in-force contracts that relates to unexpired

Notes

risks at the statement of financial position date is reported as premium provisions. Premium provisions are generally calculated according to a best estimate of expected payments throughout the agreed risk period; however, as a minimum as the part of the premium calculated using the pro rata temporis principle until the next payment date. Adjustments are made to reflect any risk variations. This applies to gross as well as ceded business.

Claims and claims handling costs are expensed in the income statement as incurred based on the estimated liability for compensation owed to policyholders or third parties sustaining losses at the hands of the policyholders. They include direct and indirect claims handling costs that arise from events that have occurred up to the statement of financial position date even if they have not yet been reported to the Group. Claims provisions are estimated using the input of assessments for individual cases reported to the Group and statistical analyses for the claims incurred but not reported and the expected ultimate cost of more complex claims that may be affected by external factors (such as court decisions). The provisions include claims handling costs.

Claims provisions are discounted. Discounting is based on a yield curve reflecting duration applied to the expected future payments from the provision. Discounting affects the motor liability, professional liability, workers' compensation and personal accident and health insurance classes, in particular.

Provisions for bonuses and premium discounts etc. represent amounts expected to be paid to policyholders in view of the claims experience during the financial year.

Claims provisions are determined for each line of business based on actuarial methods. Where such business lines encompass more than one business area, short-

tailed claims provisions are distributed based on number of claims reported while long-tailed claims provisions are distributed based on premiums earned. The models currently used are Chain-Ladder, Bornhuetter-Ferguson, the Loss Ratio method. Chain-Ladder techniques are used for lines of business with a stable run-off pattern. The Bornhuetter-Ferguson method, and sometimes the Loss Ratio method, are used for claims years in which the previous run-off provides insufficient information about the future run-off performance.

The provision for annuities under workers' compensation insurance is calculated on the basis of a mortality corresponding to the G82 calculation basis (official mortality table).

In some instances, the historic data used in the actuarial models is not necessarily predictive of the expected future development of claims. For example, this is the case with legislative changes where an a priori estimate is used for premium increases related to the expected increase in claims. In connection with legislative changes, the same estimate is used for determining the change in the level of claims. Subsequently, this estimate is maintained until new loss history materialises which can be used for re-estimation.

Several assumptions and estimates underlying the calculation of the claims provisions are mutually dependent. Most importantly, this can be expected to be the case for assumptions relating to interest rates and inflation.

Workers' compensation is an area in which explicit inflation assumptions are used, with annuities for the insured being indexed based on the workers' compensation index. An inflation curve that reflects the market's inflation expectations plus a real wage spread is used as an approximation to the workers' compensation index.

For other lines of business, the inflation assumptions, because present only implicitly in the actuarial models, will cause a certain lag in predicting the level of future losses when a change in inflation occurs. On the other hand, the effect of discounting will show immediately as a consequence of inflation changes to the extent that such changes affect the interest rate.

Other correlations are not deemed to be significant.

Liability adequacy test

Tests are continuously performed to ensure the adequacy of the insurance provisions. In performing these tests, current best estimates of future cash flows of claims, gains and direct and indirect claims handling costs are used. Any deficiency results in an increase in the relevant provision, and the adjustment is recognised in the income statement.

Employee benefits

Pension obligations

The Group operates various pension schemes. The schemes are funded through contributions to insurance companies or trustee-administered funds. In Norway, the Group operates a defined-benefit plan. In Denmark, the Group operates a defined-contribution plan. A defined-contribution plan is a pension plan under which the Group pays fixed contributions into a separate entity (a fund) and will have no legal or constructive obligation to pay further contributions. In Sweden, the Group complies with the industry pension agreement, FTP-Planen. FTP-Planen is primarily a defined-benefit plan as regards the future pension benefits. Försäkringsbranschens Pensionskassa (FPK) is unable to provide sufficient information for the Group to use defined-benefit accounting. The plan is therefore accounted for as a defined-contribution plan.

For the defined-benefit plan recognised in the statement of financial position, an annual actuarial calculation is made of the capital value of the future benefits to which employees are entitled as a result of their employment with the group so far and which must be disbursed according to the plan. The capital value is calculated using the Projected Unit Credit Method, which is based on input **Cf. note 20**.

The capital value of the pension obligations less the fair value of any plan assets is recognised in the statement of financial position under pension assets and pension obligations, respectively, depending on whether the net amount is an asset or a liability.

In case of changes to assumptions concerning the discounting factor, inflation, mortality and disability or in case of differences between expected and realised returns on pension assets, actuarial gains or losses ensue. These gains and losses are recognised under other comprehensive income.

In case of changes to the benefits stemming from the employees' employment with the group so far, a change is seen in the actuarially calculated capital value which is considered as pension costs for previous financial years. The change is recognised in the results immediately. Net finance costs for the year are recognised in the investment return. All other costs are recognised under insurance operating costs. The plan is closed for new business.

Other employee benefits

Employees of the Group are entitled to a fixed payment when they reach retirement and when they have been employed with the Group for 25 and for 40 years. The Group recognises this liability at the time of signing the contract of employment.

In special instances, the employee can enter into a contract with the Group to receive compensation for loss of pension benefits caused by reduced working hours. The Group recognises this liability based on statistical models.

Income tax and deferred tax

The Group expenses current tax according to the tax laws of the jurisdictions in which it operates. Current tax liabilities and current tax receivables are recognised in the statement of financial position as estimated tax on the taxable income for the year, adjusted for change in tax on prior years' taxable income and for tax paid under the on-account tax scheme.

Deferred tax is measured according to the statement of financial position liability method on all timing differences between the tax and accounting value of assets and liabilities. Deferred income tax is measured using the tax rules and tax rates that apply in the relevant countries on the statement of financial position date when the deferred tax asset is realised or the deferred income tax liability is settled.

Deferred income tax assets, including the tax value of tax losses carried forward, are recognised to the extent that it is probable that future taxable profit will be realised against which the temporary differences can be offset.

Deferred income tax is provided on temporary differences concerning investments, except where Tryg controls when the temporary difference will be realised, and it is probable that the temporary difference will not be realised in the foreseeable future.

Other provisions

Provisions are recognised when the Group has a legal or constructive obligation because of an event prior to or at

the statement of financial position date, and it is probable that future economic benefits will flow out of the Group. Provisions are measured at the best estimate by management of the expenditure required to settle the present obligation.

Provisions for restructurings are recognised as obligations when a detailed formal restructuring plan has been announced prior to or at the statement of financial position date at the latest to the persons affected by the plan.

Own insurance is included under other provisions. The provisions apply to the Group's own insurance claims and are reported when the damage occurs according to the same principle as the Group's other claims provisions.

Debt

Debt comprises debt in connection with direct insurance and reinsurance, amounts owed to credit institutions, current tax obligations and other debt. Derivative financial instruments are assessed at fair value according to the same practice that applies to financial assets. Other liabilities are assessed at amortised cost based on the effective interest method.

Debt related to leasing and the external investors share of Kapitalforeningen Tryg invest are included in Other debt.

Cash flow statement

The consolidated cash flow statement is presented using the direct method and shows cash flows from operating, investing and financing activities as well as the Group's cash and cash equivalents at the beginning and end of the financial year. No separate cash flow statement has been prepared for the parent company

because it is included in the consolidated cash flow statement.

Cash flows from operating activities are calculated whereby major classes of gross cash receipts and gross cash payments are disclosed.

Cash flows from investing activities comprise payments in connection with the purchase and sale of intangible assets, property, plant and equipment as well as financial assets and deposits with credit institutions.

Cash flows from financing activities comprise changes in the size or composition of Tryg's share capital and related costs as well as the raising of loans, repayments of interest-bearing debt and the payment of dividends.

Cash and cash equivalents comprise cash and demand deposits.

The loss in Tryg A/S can only be utilised in Tryg A/S. The loss can be carried forward indefinitely. The losses are not recognised as tax assets until it has been substantiated that the company can generate sufficient future taxable income to offset the tax losses.

8 Own funds

From 2016, Tryg A/S calculates solvency ratio and own funds on Group level according to Solvency II rules. Please refer to note 18 in the Tryg Group on Solvency II own funds.

9 Contractual obligations, contingent liabilities and collateral

The Danish companies in the Tryg Group are jointly taxed with TryghedsGruppen smba. The companies and the other jointly taxed companies are liable for any obligations to withhold taxes at source on interest, royalties, dividends and income taxes etc. in respect of the jointly taxed companies.

Companies in the Tryg Group are party to a number of disputes in Denmark, Norway and Sweden. Management believes that the outcome of these disputes will not affect the Group's financial position over and above the receivables and liabilities recognised in the statement of financial position at 31 December 2018.

DKKm

10 Related parties

Tryg A/S has no related parties with a controlling influence other than the parent company, TryghedsGruppen smba. Related parties with a significant influence include the Supervisory Board, the Executive Board and their members' related family.

Fees are charges incurred during the financial year. Variable salary includes the charges for matching shares, which are recognised over 4 years. Reference is made to section 'Corporate governance' of the management's review on the corresponding disbursements. The Executive Board and risk-takers are included in incentive programmes. Please refer to note 6 for the Tryg Group.

The members of the Supervisory Board in Tryg A/S are paid with a fixed remuneration and are not covered by the incentive schemes.

The Executive Board is paid a fixed remuneration, car allowance and pension. The variable salary is awarded in the form of share based remuneration and cash, see 'Corporate governance'.

Each member of the Executive Board is entitled to 12 months' notice and severance pay equal to 12 months' salary plus pension contribution (Group CEO is entitled to severance pay equal to 18 months' salary). If a change of control clause is actioned CEO and COO are instead entitled to Severance pay equal to 36 months' salary and CFO to 24 months' salary and a notice period of 6 months.

Risk-takers are defined as employees whose activities have a significant influence on the company's risk profile. The Supervisory Board decides which employees should be considered to be risk-takers.

b) Amounts relating to eliminations and one-off items. In 2018 Cost, Claims and Other Costs were negatively affected by DKK 75m, DKK 49m, DKK 76m. The costs are related to integration and transactions costs for the acquirement of Alka. In 2016 costs and claims were negatively affected by DKK 162m and DKK 88m respectively, mainly due to impairment of software.				
c) Adjustment of gross expense ratio included only in 'Tryg'. The adjustment is explained in a footnote to Financial highlights.

Key ratios are calculated in accordance with 'Recommendations & Financial Ratios' issued by the Danish Society of Financial Analysts.

Group chart

Group chart at 1 January 2019. Companies and branches are wholly owned by Danish owners and domiciled in Denmark, unless otherwise stated.

Company

Branch

Glossary

The financial highlights and key ratios of Tryg have been prepared in accordance with the executive order issued by the Danish Financial Supervisory Authority on the financial reports for insurance companies and multi-employer occupational pension funds, and also comply with 'Recommendations & Ratios' issued by the Danish Finance Society.

Claims ratio, net of ceded business

Gross claims ratio + net reinsurance ratio.

Combined ratio

The sum of the gross claims ratio, the net reinsurance ratio and the gross expense ratio.

Danish general insurance

Comprises the legal entities Tryg Forsikring A/S (including Finnish and German guarantee branch and Tryg Livsforsikring A/S and excluding the Norwegian and Swedish branches).

Diluted average number of shares

Average number of shares adjusted for number of share options which may potentially dilute.

Discounting

Expresses recognition in the financial statements of expected future payments at a value below the nominal amount, as the recognised amount carries interest until payment. The size of the discount depends on the market-based discount rate applied and the expected time to payment.

Dividend per share

$$\frac{\text{Proposed dividend}}{\text{Number of shares at year-end}}$$

Earnings per share

$$\frac{\text{Profit or loss for the year} \times 100}{\text{Average number of shares}}$$

Earnings per share of continuing business

$$\frac{\text{Diluted earnings from continuing business after tax}}{\text{Diluted average number of shares}}$$

Gross claims ratio

$$\frac{\text{Gross claims} \times 100}{\text{Gross premium income}}$$

Gross expense ratio without adjustment

$$\frac{\text{Gross insurance operating costs} \times 100}{\text{Gross premium income}}$$

Gross premium income

Calculated as gross premium income adjusted for change in gross premium provisions, less bonuses and premium discounts.

Market price/net asset value

$$\frac{\text{Share price}}{\text{Net asset value per share}}$$

Net asset value per share

$$\frac{\text{Equity at year-end}}{\text{Number of shares at year-end}}$$

Net reinsurance ratio

$$\frac{\text{Profit or loss from reinsurance} \times 100}{\text{Gross premium income}}$$

Norwegian general insurance

Comprises Tryg Forsikring A/S, Norwegian branch.

Operating ratio

Calculated as the combined ratio plus insurance technical interest in the denominator.

$$\frac{\text{Claims} + \text{insurance operating costs} + \text{profit or loss from reinsurance} \times 100}{\text{Gross premium income} + \text{insurance technical interest}}$$

Own funds

Equity plus share of qualifying solvency debt and profit margin (solvency purpose), less intangible assets, tax asset and proposed dividend.

Price/Earnings

$$\frac{\text{Share price}}{\text{Earnings per share}}$$

Relative run-off result

Run-off gains/losses net of reinsurance divided by claims provisions net of reinsurance beginning of year.

Return on equity after tax (%)

$$\frac{\text{Profit for the year after tax} \times 100}{\text{Average equity}}$$

Run-off gains/losses

The difference between the claims provisions at the beginning of the financial year (adjusted for foreign currency translation adjustments and discounting effects) and the sum of the claims paid during the financial year and the part of the claims provisions at the end of the financial year pertaining to injuries and damage occurring in earlier financial years.

Solvency II

New solvency requirements for insurance companies issued by the EU Commission. The new rules came into force at 1 January 2016.

Solvency ratio

Ratio between own funds and capital requirement.

Swedish general insurance

Comprises Tryg Forsikring A/S, Swedish branch.

Total reserve ratio

Reserve ratio, claims provisions + premium provisions divided by premium income.

Unwinding

Unwinding of discounting takes place with the passage of time as the expected time to payment is reduced. The closer the time of payment, the smaller the discount. This gradual increase of the provision is not recognised under claims, but under technical interest in the income statement.

Product overview

Being one of the largest insurance companies in the Nordic region, Tryg offers a broad range of insurance products to both private individuals and businesses. Tryg continuously develops new products and adapts existing peace of mind solutions to customer requirements and developments in society. Also, Tryg focuses strongly at all times on striking a better balance between price and risk.

Tryg sells its products primarily via its own sales channels such as call centres, the Internet, tied agents, franchisees (Norway), interest organisations, car dealers, real estate agents, insurance brokers and Nordea branches. Moreover, Tryg engages in international cooperation with the AXA Group. It is an important element of Tryg's distribution strategy to be available in places where customers want it and that most distribution takes place via the company's own sales channels.

Motor insurance

Motor insurance accounts for 30% of total premium income and comprises mandatory third-party liability insurance providing cover for injuries to a third party or damage to a third party's property, and a voluntary comprehensive insurance policy that provides cover for damage to the customer's own vehicle from collision, fire or theft.

In Denmark, motor insurance taken out by concept customers includes Tryg's roadside assistance, such as towing and battery jump-start.

Fire and contents – Private

Fire and contents insurance for private customers represents 23% of total premium income and includes, for example, house and contents insurance.

House insurance covers damage to properties caused by, for example, fire, storm or water, legal assistance and the customer's liability as owner of the property. The contents insurance covers loss of or damage to private household contents and covers in and outside of the home. Moreover, the insurance includes liability and legal assistance, to which can be added a number of supplementary covers, for example cover of sudden damage and damage to electronic equipment.

Personal accident insurance

Personal accident insurance accounts for 11% of total premium income and covers accidental bodily injury and death resulting from accidents.

Compensation takes the form of a lump sum intended to help the customer cope with the financial consequences of an accident, thereby making their daily lives easier. The insurance can include a number of supplementary covers, including treatment by a physiotherapist or chiropractor.

Fire and contents – Commercial

Commercial fire and contents insurance, which includes building insurance, represents 13% of total premium income and covers the loss of or damage to the buildings, stock or equipment of commercial customers. Moreover, Tryg provides cover for operating losses in connection with covered claims.

Workers' compensation insurance

Workers' compensation insurance accounts for 5% of total premium income and covers employees against bodily injury sustained at work (in Norway, also occupational diseases). Workers' compensation insurance is mandatory and covers a company's employees (except for public sector employees and persons working for sole proprietors).

General third-party liability insurance

General third-party liability insurance represents 6% of total premium income and covers various types of liability, including claims incurred by a company arising from the conduct of its business or in connection with its products, and third-party liability for professionals.

Health insurance

Health insurance represents 2% of total premium income. The insurance covers the costs of examinations, treatment, medicine, surgery and rehabilitation at a private health facility.

Disclaimer

Certain statements in this annual report are based on the beliefs of our management as well as assumptions made by and information currently available to management. Statements regarding Tryg's future operating results, financial position, cash flows, business strategy, plans and future objectives other than statements of historical fact can generally be identified by the use of words such as 'targets', 'believes', 'expects', 'aims', 'intends', 'plans', 'seeks', 'will', 'may', 'anticipates', 'would', 'could', 'continues' or similar expressions.

A number of different factors may cause the actual performance to deviate significantly from the forward-looking statements in this annual report, including but not limited to general economic developments, changes in the competitive environment, developments in the financial markets, extraordinary events such as natural disasters or terrorist attacks, changes in legislation or case law and reinsurance.

Should one or more of these risks or uncertainties materialise, or should any underlying assumptions prove to be incorrect, Tryg's actual financial condition or results of operations could materially differ from that described herein as anticipated, believed, estimated or expected. Tryg is not under any duty to update any of the forward-looking statements or to conform such statements to actual results, except as may be required by law.

i [Read more](#) in the chapter [Capital and risk management](#) on pages 31-32, and in [Note 1](#) on page 60-68, for a description of some of the factors which may affect the Group's performance or the insurance industry.
