The difference between the value at vesting date and at grant (respectively CAD 4.35 per award and CAD 4.07 per award) was offset against share premium.

# **Notes to the Interim Condensed Consolidated Financial Statements**

For the three months ended March 31, 2022 and 2021, UNAUDITED

## 1. CORPORATE INFORMATION

# A. The Group

International Petroleum Corporation ("IPC" or the "Corporation" and, together with its subsidiaries, the "Group") is in the business of exploring for, developing and producing oil and gas. IPC holds a portfolio of oil and gas production assets and development projects in Canada, Malaysia and France with exposure to growth opportunities.

The Corporation's common shares are listed on the Toronto Stock Exchange in Canada and the Nasdaq Stockholm Exchange in Sweden. The Corporation is incorporated and domiciled in British Columbia, Canada under the Business Corporations Act. The address of its registered office is Suite 2600, 595 Burrard Street, P.O. Box 49314, Vancouver, BC V7X 1L3, Canada and its business address is Suite 2000, 885 West Georgia Street, Vancouver, BC V6C 3E8, Canada.

On April 10, 2021, IPC increased its working interest in the Bertam field, Malaysia, from 75% to 100% following the completion of the withdrawal of Petronas Carigali Sdn Bhd from Block PM307 and assignment of its working interest to IPC.

## B. Basis of preparation

The unaudited interim condensed consolidated financial statements have been prepared in accordance with International Accounting Standard 34, Interim Financial Reporting using accounting policies consistent with International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB"). The financial statements should be read in conjunction with IPC's annual consolidated financial statements for the year ended December 31, 2021, which have been prepared in accordance with IFRS as issued by the IASB.

These unaudited interim consolidated financial statements are presented in United States Dollars (USD), which is the Group's presentation and functional currency. The unaudited interim consolidated financial statements have been prepared on a historical cost basis, except for items that are required to be accounted for at fair value as detailed in the Group's accounting policies. Intercompany transactions and balances have been eliminated.

The unaudited interim condensed consolidated financial statements have been approved by the Board of Directors of IPC and authorized for issuance on May 3, 2022.

The unaudited interim condensed consolidated financial statements have been prepared following the same accounting policies and methods of application as those in the Group's audited annual consolidated financial statements for the year ended December 31, 2021.

# C. Going concern

The Group's consolidated financial statements for the three months ended March 31, 2022, have been prepared on a going concern basis, which assumes that the Group will be able to realize its assets and discharge its liabilities in the normal course of business as they become due in the foreseeable future.

## D. Changes in accounting policies and disclosures

During the three months ended March 31, 2022, the Group applied the amended accounting standards, interpretations and annual improvement points that are effective as of January 1, 2022.

# **Notes to the Interim Condensed Consolidated Financial Statements**

For the three months ended March 31, 2022 and 2021, UNAUDITED

# 2. SEGMENT INFORMATION

The Group operates within several geographical areas. Operating segments are reported at a country level which is consistent with the internal reporting provided to the CEO, who is the chief operating decision maker.

The following tables present segment information regarding: revenue, production costs, exploration and evaluation costs and gross profit. The Group derives its revenue from contracts with customers primarily through the transfer of oil and gas at a point in time. In addition, certain identifiable asset segment information is reported in Note 7.

# 3. PRODUCTION COSTS

Three months ende	d -	N	/larc	h	-31	1
-------------------	-----	---	-------	---	-----	---

USD Thousands	2022	2021
Cost of operations	60,704	45,894
Tariff and transportation expenses	9,328	8,703
Direct production taxes	2,953	2,044
Operating costs	72,985	56,641
Cost of blending <sup>1</sup>	42,641	18,444
Change in inventory position	(3,553)	(9,463)
Total production costs	112,073	65,622

<sup>&</sup>lt;sup>1</sup> In Canada, oil production is blended with purchased condensate diluent to meet pipeline specifications. Cost of blending represents the contracted purchase of diluent used for blending net of proceeds from the sale of surplus diluent. A net gain of USD 11 thousand and a gain of USD 70 thousand was recognized relating to the difference between the cost and sale proceeds of the surplus diluent for the three months ended March 31, 2022 and March 31, 2021 respectively.

### 4. FINANCE INCOME

Three months ended - March 31

USD Thousands	2022	2021
Foreign exchange gain, net	3,059	-
Interest income	55	-
Other financial income	17	-
Total finance income	3,131	-

# **5. FINANCE COSTS**

Three months ended - March 31

USD Thousands	2022	2021
Foreign exchange loss, net	-	678
Interest expense	4,034	3,999
Unwinding of asset retirement obligation discount	2,760	2,857
Amortization of loan fees	2,139	590
Amortization of bond fees	186	_
Loan commitment fees	259	273
Other financial costs	360	95
Total finance costs	9,738	8,492

# 6. INCOME TAX

Three months ended - March 31

USD Thousands	2022	2021
Current tax	(4,123)	(941)
Deferred tax	(23,375)	1,212
Total tax recovery / (expense)	(27,498)	271

The deferred tax amount arises primarily where there is a difference in depletion for tax and accounting purposes. The deferred tax expense in the statement of operations for the current period mainly relates to the tax losses carried forward used during Q1 2022.

# **Notes to the Interim Condensed Consolidated Financial Statements**

For the three months ended March 31, 2022 and 2021, UNAUDITED

### Specification of deferred tax assets and tax liabilities1

USD Thousands	March 31, 2022	December 31, 2021
Unused tax loss carry forward	94,479	115,560
Other	2,233	3,414
Deferred tax assets	96,712	118,974
Accelerated allowances	70,645	73,641
Other	_	287
Deferred tax liabilities	70,645	73,928
Deferred taxes, net	26,067	45,046

<sup>&</sup>lt;sup>1</sup> The specification of deferred tax assets and tax liabilities does not agree to the face of the balance sheet due to the netting off of balances in the balance sheet when they relate to the same jurisdiction.

The deferred tax liabilities consist of accelerated allowances, being the difference between the book and the tax value of oil and gas properties. The deferred tax liabilities will be released over the life of the oil and gas assets as the book value is depleted for accounting purposes.

Deferred tax assets in relation to tax loss carried forwards are only recognized in so far that there is a reasonable certainty as to the timing and the extent of their realization. The recognized unused tax loss carry forward mainly relates to Canada. The Group has concluded that the deferred assets will be recoverable using the estimated future taxable income based on the approved business plans and budgets.

Long-term receivables	27,583	28,024
Financial assets	7,729	7,729
	35,312	35,753

Long-term receivables represent cash payments made to an asset retirement obligation fund and financial assets mainly represent secured amounts transferred for the future asset retirement obligation, in respect of the Bertam field, Malaysia. (Also see Note 16.)

# **10. INVENTORIES**

USD Thousands	March 31, 2022	December 31, 2021
Hydrocarbon stocks	12,390	8,355
Well supplies and operational spares	7,890	11,840
	20,280	20,195

# 11. TRADE AND OTHER RECEIVABLES

USD Thousands	March 31, 2022	December 31, 2021
Trade receivables	154,141	91,062
Underlift	3,586	9,827
Joint operations debtors	2,670	1,930
Prepaid expenses and accrued income	7,761	6,325

	169,747	110,897

# 12. CASH AND CASH EQUIVALENTS

The cash and cash equivalents disclosed at March 31, 2022 includes the net proceeds of the USD 300 million senior unsecured bonds (the "Bonds") issuance after repayment of the outstanding reserve-based lending ("RBL") credit facilities. The amount of cash and cash equivalents is unrestricted. (Also see Note 15.)

# 13. SHARE CAPITAL

The Group's issued common share capital is as follows:

	Number of shares
Balance at January 1, 2021	155,342,757
Stock option exercise	25,000
Cancellation of repurchased common shares	(169,652)
Balance at December 31, 2021	155,198,105
Cancellation of repurchased common shares	(4,232,092)
Balance at March 31, 2022	150,966,013

# **Notes to the Interim Condensed Consolidated Financial Statements**

For the three months ended March 31, 2022 and 2021, UNAUDITED

The common shares of IPC trade on both the Toronto Stock Exchange and the Nasdag Stockholm.

As at January 1, 2021, IPC had a total of 155,342,757 common shares issued and outstanding. Following the exercise of stock options during February 2021, the number of issued and outstanding common shares of the Corporation increased by 25,000 to 155,367,757 common shares. On December 1, 2021, IPC announced the commencement of a share repurchase program. During the period up to December 31, 2021, IPC repurchased an aggregate of 1,330,303 common shares, of which 169,652 shares were cancelled as at December 31, 2021. As at December 31, 2021, IPC had a total of 155,198,105 common shares issued and outstanding with voting rights.

As at May 3, 2022, following the cancellation during Q1 2022 of a further 4,232,092 common shares repurchased, IPC has a total of 150,966,013 common shares issued and outstanding with no par value.

In addition, IPC has 117,485,389 outstanding class A preferred shares, issued as a part of an internal corporate structuring to a wholly-owned subsidiary of IPC. Such preferred shares are not listed on any stock exchange, do not carry the right to vote on matters to be decided by the holders of IPC's common shares and does not impact the earnings per share calculations.

#### 14. EARNINGS PER SHARE

Basic earnings per share are based on net result attributable to the common shareholders and is calculated based upon the weighted-average number of common shares outstanding during the periods presented.

	Three months e	nded - March 31
USD Thousands	2022	2021
Net result attributable to shareholders of the Parent Company, USD	80,806,696	26,883,563
Weighted average number of shares for the period	155,150,553	155,352,027
Earnings per share, USD	0.52	0.17
Weighted average diluted number of shares for the period	158,049,693	157,411,594
Earnings per share fully diluted, USD	0.51	0.17

## 15. FINANCIAL LIABILITIES

USD Thousands	March 31, 2022	December 31, 2021
Bank loans	14,400	113,121
Capitalized financing fees	-	(2,096)
Bonds	300,000	-
Capitalized bond fees	(5,397)	_
	309,003	111,025

In May 2020, IPC entered into a EUR 13 million unsecured credit facility in France (the "France Facility") under a financial assistance program instituted by the French government. In April 2021, IPC extended the France Facility until May 2026, with quarterly repayments commencing in August 2022. The France Facility amount was fully drawn as at March 31, 2022.

An amount of USD 2.6 million drawn under the France Facility as at March 31, 2022 is classified as current representing the repayment planned within the next twelve months.

In February 2022, IPC completed the issuance of USD 300 million of Bonds, which mature in February 2027 and have a fixed coupon rate of 7.25 percent per annum, payable in semi-annual instalments. The Group used a portion of the proceeds of the Bonds to fully repay the outstanding RBL credit facilities, which were then cancelled. At the same time, the Group entered into a revolving credit facility of CAD 75 million (the "Canadian RCF") in connection with its oil and gas assets in Canada. The Canadian RCF has a maturity of February 2024 and no cash amounts were drawn under the Canadian RCF as at March 31, 2022.

The amounts drawn under the Bonds as at March 31, 2022, are classified as non-current as there are no mandatory repayments within the next twelve months.

The Group is in compliance with the covenants of the Bonds and financing facilities as at March 31, 2022.

The carrying amount of the Group's financial assets approximate their fair values at the balance sheet dates.

For financial instruments measured at fair value in the balance sheet, the following fair value measurement hierarchy is used:

- Level 1: based on quoted prices in active markets;
- Level 2: based on inputs other than quoted prices as within level 1, that are either directly or indirectly observable;
- Level 3: based on inputs which are not based on observable market data.

Based on this hierarchy, financial instruments measured at fair value can be detailed as follows:

March 31, 2022 USD Thousands	Level 1	Level 2	Level 3
Other current receivables	3,586	_	_
Derivative instruments – current	_	_	_
Financial assets	3,586	_	_
Derivative instruments – current	_	11,987	_
Financial liabilities		11,987	_
December 31, 2021 USD Thousands	Level 1	Level 2	Level 3
Other current receivables	9,827	_	_
Derivative instruments – current	_	1,159	_
Financial assets	9,827	1,159	-
Derivative instruments – current	_	_	_
Financial liabilities		_	_

The Group had gas price sale financial hedges outstanding as at March 31, 2022, which are summarized as follows:

Period	Volume (Gigajoules (GJ) per day)	Type	Average Pricing
April 1, 2022 – September 30, 2022	35,000	AECO Swap	CAD 3.41/GJ

The Group had oil price sale financial hedges outstanding as at March 31, 2022, which are summarized as follows:

Period	Volume (barrels per day)	Type	Average Pricing
April 1, 2022 - June 30, 2022	11,900	WCS/WTI Differential	USD - 13.06/bbl
July 1, 2022 – December 31, 2022	16,000	WCS/WTI Differential	USD - 13.04/bbl

All of the above hedges are treated as effective and changes to the fair value are reflected in other comprehensive income.

For the three months ended March 31, 2022 and 2021, UNAUDITED

## 19. CONTRACTUAL OBLIGATIONS AND COMMITMENTS

In Canada, an oil pipeline from the Onion Lake Thermal field to the Husky Alberta Gathering System has been built by Husky Midstream ("Husky") for the exclusive use of IPC. Onion Lake Thermal oil production is blended with condensate before being transported via the pipeline and is therefore expected to attract improved realized prices as a result of the blended oil. The pipeline is also expected to improve the reliability and uptime of the transportation and production at Onion Lake Thermal. The initial investment in the pipeline was met by Husky and is to be recovered through an agreed tariff charged to IPC. IPC has committed to a firm transportation service for 15 years from commencement of service, with total tariffs committed as shown in the table below:

	2022 <sup>1</sup>	2023	2024	2025	2026	Thereafter
Transportation service (MCAD)	20.2	27.3	28.0	28.4	29.0	303.3

<sup>&</sup>lt;sup>1</sup> Commissioning of the pipeline and commencement of the service occurs start April 1, 2022.

In Malaysia, IPC has an obligation to make payments towards historic costs on Block PM307 payable on the Bertam field for every 1 MMboe gross that the field produces above 10 MMboe gross. The estimated liability based on current 2P reserves has been provided for in the Group's Balance Sheet (see Note 16).

# **20. RELATED PARTIES**

Lundin Energy has charged the Group USD 158 thousand in respect of office space rental and USD 400 thousand in respect of shared services provided during the Q1 2022.

All transactions with related parties are in the normal course of business and are made on the same terms and conditions as with parties at arm's length.

# 21. SUBSEQUENT EVENTS

No events have occurred since March 31, 2022, that are expected to have a substantial effect on this financial report.

## Non-IFRS Measures

References are made in this MD&A to "operating cash flow" (OCF), "free cash flow" (FCF), "Earnings Before Interest, Tax, Depreciation and Amortization" (EBITDA), "operating costs" and "net debt"/"net cash" which are not generally accepted accounting measures under Interest, tax, Depreciation and Amortization (ERIDA) on thave any standardized meaning prescribed by IFRS and, therefore, may not be comparable with definitions of OCF, FCF, EBITDA, operating costs and net debty net cash that may be used by other public companies. Management believes that OCF, FCF, EBITDA, operating costs and net debty net cash are useful supplemental measures that may assist shareholders and investors in assessing the cash generated by and the financial performance and position of the Corporation. Non-IFRS measures should not be considered in isolation or as a substitute for measures prepared in accordance with IFRS. The definition and reconciliation of each non-IFRS measure is presented in this MD&A. See "Non-IFRS Measures" on page 17.

## Forward-Looking Statements

Forward-Looking Statements
Certain statements contained in this MD&A constitute "forward-looking statements" or "forward-looking information" (within the meaning of applicable securities legislation). Such statements and information (together, "forward-looking statements") relate to future events, including the Corporation's future performance, business prospects or opportunities. Any statements that express or involve discussions with respect to predictions, expectations, beliefs, plans, projections, forecasts, guidance, budgets, objectives, assumptions or future events or performance (often, but not always, using words or phrases such as "seek", "anticipate", "plan", "continue", "estimate", "expect", "may", "will", "project", "forecast", "predict", "potential", "targeting", "intend", "could", "might", "should", "believe", "budget" and similar expressions) are not statements of historical fact and may be "forward-looking statements". Although IPC believes that the expectations and assumptions on which such forward-looking statements are based are reasonable, undue reliance should not be placed on the forward-looking statements because IPC can give no assurances that they will prove to be correct. Since forward-looking statements address future events and conditions, by their very nature they involve inherent risks and uncertainties. Actual results could differ materially from those currently anticipated due to a number of factors and risks. For additional information underlying forward-looking statements, refer to the "Cautionary Statement Regarding Forward-Looking Information" on page 22.

Reserves estimates, contingent resource estimates and estimates of future net revenue in respect of IPC's oil and gas assets in Canada are effective as of December 31, 2021, and are included in the reports prepared by Sproule Associates Limited (Sproule), an independent qualified reserves evaluator, in accordance with National Instrument 51-101 – Standards of Disclosure for Oil and Gas Activities (NI 51-101) and the Canadian Oil and Gas Evaluation Handbook (the COGE Handbook) and using Sproule's December 31, 2021, price forecasts.

Reserve estimates, contingent resource estimates and estimates of future net revenue in respect of IPC's oil and gas assets in France and Malaysia are effective as of December 31, 2021, and are included in the report prepared by ERC Equipoise Ltd. (ERCE), an independent qualified reserves auditor, in accordance with NI 51-101 and the COGE Handbook, and using Sproule's December 31, 2021, price forecasts.

Certain abbreviations and technical terms used in this MD&A are defined or described under the heading "Other Supplementary Information".

The Covid-19 virus and the restrictions and disruptions related to it had a material effect on the world demand for, and prices of, oil and gas as well as the market price of the shares of oil and gas companies generally. Although demand, commodity prices and share prices have recovered, there can be no assurance that these effects will not resume or that commodity prices will not decrease or remain volatile in the future. These factors are beyond the control of the Corporation and it is difficult to assess how these, and other factors, will continue to affect the Corporation and the market price of IPC's common shares. In light of the current situation, as at the date of this MD&A, the Corporation continues to review and assess its business plans and assumptions regarding the business environment, as well as its estimates of future production, cash flows, operating costs and capital expenditures. See "Risks and Uncertainties".

For the three months ended March 31, 2022

## **INTRODUCTION**

This management's discussion and analysis ("MD&A") for International Petroleum Corporation ("IPC" or the "Corporation" and, together with its subsidiaries, the "Group") is dated May 3, 2022, and is intended to provide an overview of the Group's operations, financial performance and current and future business opportunities. This MD&A should be read in conjunction with IPC's unaudited condensed consolidated financial statements and accompanying notes for the three months ended March 31, 2022 ("Financial Statements").

# **Group Overview**

The Group is in the business of exploring for, developing and producing oil and gas. IPC holds a portfolio of oil and gas production assets and development projects in Canada, Malaysia and France with exposure to growth opportunities.

The Corporation's common shares are listed on the Toronto Stock Exchange in Canada and the Nasdaq Stockholm Exchange in Sweden. The Corporation is incorporated and domiciled in British Columbia, Canada, under the Business Corporations Act. The address of its registered office is Suite 2600, 595 Burrard Street, P.O. Box 49314, Vancouver, BC V7X 1L3, Canada and its business address is Suite 2000, 885 West Georgia Street, Vancouver, BC V6C 3E8, Canada.

## **Basis of Preparation**

The MD&A and the Financial Statements have been prepared in accordance with International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB").

Financial information is presented in United States Dollars ("USD"). However, as the Group operates in Europe and in Canada, certain financial information prepared by subsidiaries has been reported in Euros ("EUR") and in Canadian Dollars ("CAD"). In addition, certain costs relating to the operations in Malaysia, which are reported in USD, are incurred in Malaysian Ringgit ("MYR").

Exchange rates for the relevant currencies of the Group with respect to the US Dollar are as follows:

	March 31, 2022		March 31, 2021		December 31, 2021	
	Average	Period end	Average	Year end	Average	Year end
1 EUR equals USD	1.1225	1.1101	1.2056	1.1725	1.1835	1.1326
1 USD equals CAD	1.2666	1.2518	1.2668	1.2607	1.2536	1.2708
1 USD equals MYR	4.1923	4.2048	4.9002	4.8618	4.1433	4.1660

For the three months ended March 31, 2022

## **HIGHLIGHTS**

# Q1 2022 Business and Financial Highlights

- Accelerating share repurchases with the intention to launch a substantial issuer bid (SIB) to purchase for cancellation up to approximately MUSD 100 of IPC common shares.
- Average net production of approximately 45,800 barrels of oil equivalent (boe) per day (boepd) for the first quarter of 2022, above high end guidance (49% heavy crude oil, 17% light and medium crude oil and 34% natural gas).<sup>(1)</sup>
- Full year 2022 average net production guidance range is retained at 46,000 to 48,000 boepd.
- Drilling operations on the A15 side-track well and three well pump upgrades at the Bertam field, Malaysia were completed by April 2022.
- Operating costs per boe of USD 17.7 for the first quarter of 2022, above the CMD guidance of USD 17.2 per boe mainly as
  a result of higher gas and energy prices. Full year 2022 operating costs guidance revised at between USD 16 to 17 per boe
  from USD 15.2 per boe.<sup>(3)</sup>
- Record high operating cash flow (OCF) generation for IPC for the first quarter 2022 amounted to MUSD 145. (3)
- Full year OCF guidance increased to between MUSD 430 to 635 (Brent USD 70 to 100 per barrel).
- Capital and decommissioning expenditures of MUSD 40 for the first guarter of 2022, in line with CMD guidance.
- Record high free cash flow (FCF) generation for IPC for the first guarter of 2022 amounted to MUSD 96.<sup>(3)</sup>
- Full year 2022 FCF guidance increased to between MUSD 275 to 480 (Brent USD 70 to 100 per barrel).(3)
- IPC's inaugural MUSD 300 bond issuance completed on February 1, 2022, with a portion of the bond proceeds used to fully repay and cancel IPC's existing reserve-based lending credit facilities.
- Net debt of MUSD 42 as at March 31, 2022, down from MUSD 286 at the end of the first quarter of 2021 and down from MUSD 94 as at December 31, 2021. Net cash position achieved in April 2022. (3)
- Net result of MUSD 81 for the first quarter of 2022.
- Proved plus probable (2P) reserves as at December 31, 2021 of 270 million boe (MMboe), with a reserves life index (RLI) of 16 years. (1)(2)
- Contingent resources (best estimate, unrisked) as at December 31, 2021 of 1,410 MMboe. (1)(2)
- · Front End Engineering Design (FEED) studies commenced on the Blackrod project, Canada.

## **OPERATIONS REVIEW**

### **Business Overview**

Oil and gas prices continued to strengthen during the first quarter of 2022, driven by a very tight physical market with oil inventories sitting well below the 5 year average and OPEC+ struggling to keep up with increasing production quotas against a backdrop of recovering demand. The Russian invasion of Ukraine in late February 2022 has triggered a severe response from the international community that has further exacerbated the market tightness and the profound effects of this crisis are likely to be long lasting as consumers and producers alike reshape their thinking around access to resources and security of supply. Brent prices averaged over USD 100 per barrel during the first quarter of 2022, well in excess of fourth quarter 2021 Brent oil prices that averaged USD 80 per barrel.

In Canada, first quarter 2022 Western Canadian Select (WCS) crude price differentials averaged below USD 15 per barrel and forward markets into 2022 and 2023 are pricing the WCS differential at below USD 14 per barrel. Completion and placement into service of Enbridge's Line 3 replacement pipeline in the fourth quarter of 2021 as well as the positive construction progress on the TransMountain pipeline expansion project are providing a much more constructive outlook for Canadian oil market egress relative to the tightness we have witnessed over the past several years. IPC has positioned itself well to benefit from this fundamental improvement in market conditions and has hedged approximately two thirds of our WCS differential exposure at around USD 13 per barrel for the remainder of 2022. No other oil hedges are in place providing full exposure to the strength we are seeing in both the Brent and West Texas Intermediate benchmarks.

Gas markets have also strengthened driven by a combination of increasing demand and a longer period of cold weather in the United States reducing storage levels. In Canada storage levels are 40% below the average level seen in the past ten years. First quarter average Empress prices were CAD 4.96 per Mcf and forward prices are the strongest IPC has witnessed at above CAD 5.00 per Mcf for the remainder of 2022. IPC has hedged AECO gas prices, 33,000 Mcf per day at CAD 3.60 per Mcf in Q2 and Q3 2022.

IPC benefits from a well balanced mix of production comprising approximately 50% Canadian Crude, 33% Canadian Natural Gas and 17% Brent weighted oil. With synchronized strength in pricing across the entire energy complex, combined with delivering operational excellence above the high end of our first quarter forecast, IPC has again been able to deliver our best ever quarterly financial performance since our launch in 2017.

We were very pleased to complete IPC's first USD 300 million bond issuance on February 1, 2022, accessing the debt capital markets at a favourable time. We used a portion of the proceeds of the bond to fully repay and cancel our existing reserve-based lending facilities. We strongly believe that the winners in the next phase of the energy transition in the upstream oil and gas industry will be the companies able to access diverse sources of funding. Whilst we do not have an imminent acquisition, we believe that being able to demonstrate to sellers that IPC has the financial strength on its balance sheet, will enable IPC to access a greater universe of opportunities whilst differentiating us from our peers in terms of certainty of being able to close transactions.

We have created significant value from acquisition for all of our stakeholders having concluded four acquisitions in the past four years and will remain opportunistic in our approach with respect to further M&A activity focusing on securing additional high quality resources, as well as maturing our significant contingent resource base in excess of 1.4 billion barrels.

## First Quarter 2022 Highlights

During the first quarter of 2022, our assets delivered average net production of 45,800 boepd, above our high end guidance. This was made possible by the very high uptime performance across all our assets as well as higher than forecast gas production at Suffield in Canada due to the milder winter conditions reducing the impact of freeze offs. Full year 2022 production guidance of 46,000 to 48,000 boepd is retained.

Our operating costs per boe for the first quarter of 2022 was USD 17.7, USD 0.5 per boe above guidance and largely driven by higher gas prices for our Onion Lake thermal project and higher energy costs. The fact that we produce more than three times the volume of gas than we consume means that the positive revenue impact is more than three times the negative cost impact of higher gas prices. We are increasing our full year operating cost guidance from USD 15.2 per boe to USD 16 to 17 per boe to account for the increase we have seen in gas and energy prices.

Operating cash flow (OCF) generation for the first quarter of 2022 was USD 145 million, a record high for IPC. Full year 2022 OCF guidance is being increased from USD 360 to 635 million to USD 430 to 635 million assuming average Brent oil prices of USD 70 to 100 per barrel for the remainder of 2022.

Capital and decommissioning expenditure for the first quarter of 2022 was USD 40 million. Full year 2022 capital and decommissioning expenditure guidance is retained at USD 127 million.

Free cash flow (FCF) generation was exceptionally strong at USD 96 million during the first quarter of 2022, a record quarterly result for IPC. Full year 2022 FCF guidance is being increased from USD 205 to 480 million to USD 275 to 480 million assuming average Brent oil prices of USD 70 to 100 per barrel for the remainder of 2022. This represents between 19% and 33% of IPC's current market capitalization.<sup>(4)</sup>

For the three months ended March 31, 2022

Net debt has reduced to USD 42 million by the end of the first quarter of 2022. During April 2022, IPC moved into a net cash position.

IPC forecasts cumulative FCF for 2022 to 2026 of approximately USD 900 to 1,800 million (based on forecast Brent oil prices of USD 65 to 95 per barrel) generating estimated average annual FCF yield over the five year period of between 12% and 24%. (4)

### **Capital Allocation Plans**

We were also pleased to announce IPC's 2022 capital allocation plans at our 2022 CMD. IPC plans to distribute to shareholders up to 40% of the FCF generated by IPC above achieved average Brent oil prices of USD 55 per barrel, provided that IPC's net debt to EBITDA ratio is at or below 1 time.

## **Share Repurchase Programs**

# **Normal Course Issuer Bid**

IPC implemented the current share repurchase program/normal course issuer bid (NCIB) in December 2021. This program permits IPC to buy-back up to approximately 11.1 million shares, or approximately 7% of the total ou tstanding IPC shares at the time of launch, over the 12-month period up to December 2022. To date, IPC has purchased and cancelled approximately 4.4 million IPC shares under the program, or approximately 40% of the annual NCIB limit, at a total purchase cost of approximately USD 29 million. The average price of IPC shares purchased to date is approximately SEK 60 per share.

# **Substantial Issuer Bid**

Given the strong operational delivery during the first quarter of 2022 and robust financial outlook, IPC intends to accelerate share repurchases above the limits of the NCIB. IPC is pleased to announce that IPC intends to commence a substantial issuer bid (SIB) under which the Corporation plans to offer to purchase for cancellation from shareholders up to CAD 128 million, or approximately USD 100 million or SEK 980 million, of IPC's outstanding common shares. IPC believes that the SIB represents an effective use of IPC's capital and that share repurchases continue to be an efficient way to return value to IPC's shareholders.

The SIB is expected to be conducted by way of a "modified Dutch auction" which will permit shareholders to choose, within the pricing range determined by IPC, the number of shares and the price at which they wish to tender such shares, with the purchase price for all tendering shareholders being the lowest purchase price per share that will enable IPC to purchase the maximum number of shares properly tendered to the offer, up to CAD 128 million. The pricing range for the SIB is expected to be set at between CAD 12.00 to 14.00 per share, or approximately SEK 92 to 107 per share based on current foreign exchange rates, representing a range of approximately 3% discount to 13% premium over the Corporation's volume-weighted average price on the Toronto Stock Exchange over the 10 trading days prior to May 2, 2022. The offer to purchase under the SIB is expected to be open for 35 calendar days from commencement of the SIB, unless varied, extended or withdrawn by IPC. IPC intends to suspend share repurchases under the NCIB until after the expiration of the SIB.

At the minimum and maximum purchase price of the expected pricing range of CAD 12.00 to CAD 14.00, the offer to purchase under the SIB would be for up to between 10.7 million common shares (approximately 7.1% of shares currently outstanding) and 9.1 million common shares (approximately 6.1% of shares currently outstanding), respectively. As of May 3, 2022, 150,966,013 common shares of IPC are issued and outstanding and IPC holds no common shares in treasury.

Further details relating to the SIB, including instructions for tendering shares, will be provided by IPC at the time of commencement of the SIB and will be included in the formal offer to purchase and issuer bid circular, letter of transmittal, for registered shareholders, notice of guaranteed delivery for registered shareholders, tender form for shareholders holding shares through Euroclear Sweden and other related documents which will be mailed and/or made available to shareholders, and which may be filed with applicable securities regulatory authorities and made available on SEDAR at www.sedar.com and on the Corporation's website at www. international-petroleum.com.<sup>(5)</sup>

# Environmental, Social and Governance ("ESG") Performance

Responsible operatorship and ensuring that we adhere to the highest principles of business conduct have been an integral part of how we do business since the creation of IPC in 2017. Over the past five years, IPC has rapidly grown our business with the completion of three acquisitions in Canada, an acquisition in Malaysia in addition to significant organic investments into those businesses. In parallel, we have made a concerted effort to further develop and improve our sustainability strategy. As previously announced, IPC targets a reduction of our net GHG emissions intensity by the end of 2025 to 50% of the IPC's 2019 baseline and the Corporation is on track to achieving that target.

During the first quarter of 2022, IPC recorded no material safety or environmental incidents.

## Notes:

- (1) See "Supplemental Information regarding Product Types" in "Reserves and Resources Advisory" below. See also the annual information form for the year ended December 31, 2021 (AIF) available on IPC's website at www.international-petroleum.com and under IPC's profile on SEDAR at www.sedar.com.
- (2) See "Reserves and Resources Advisory" below. Further information with respect to IPC's reserves, contingent resources and estimates of future net revenue, are further described in the AIF.

For the three months ended March 31, 2022

- (3) Non-IFRS measure, see "Non-IFRS Measures" below.
- (4) Estimated FCF generation is based on IPC's current business plans over the period of 2022 to 2026. Assumptions include average net production over that period of approximately 47 Mboepd, average Brent oil prices of USD 65 to 95 per boe escalating by 2% per year, average gas prices of CAD 3.00 per thousand cubic feet, and average Brent to Western Canadian Select differentials as estimated by IPC's independent reserves evaluator and as further described in the AIF. Free cash flow yield is based on IPC's market capitalization at close April 29, 2022 (95.4 SEK/share, 9.8 SEK/USD, USD 1,470 million). IPC's current business plans and assumptions, and the business environment, are subject to change. Actual results may differ materially from forward-looking estimates and forecasts. See "Cautionary Statement Regarding Forward-Looking Information" below.
- (5) The SIB referred to in this MD&A has not yet commenced. The information relating to the SIB contained in this MD&A is for informational purposes only and does not constitute an offer to buy or the solicitation of an offer to sell shares. The solicitation and the offer to buy shares under the SIB will only be made pursuant to the issuer bid circular and related documents that are filed with the applicable securities regulatory authorities. The SIB will not be made to, nor will tenders be accepted from or on behalf of, holders of shares in any jurisdiction in which the making or acceptance of offers to sell shares would not be in compliance with the laws of that jurisdiction. Although the Board of Directors of IPC has determined to proceed towards commencement of an SIB on the terms described in this press release, market, legal, tax or other business considerations between the date hereof and the commencement of the SIB may cause the Board of Directors to determine not to proceed with the SIB on the terms described in this press release, or at all. IPC will be under no legal obligation in respect of the offer under the SIB until the SIB is formally launched. None of IPC, its Board of Directors, or IPC's advisors makes any recommendation to shareholders as to whether to tender or refrain from tendering any or all of their shares pursuant to the SIB or the purchase price or prices at which shareholders may choose to tender shares. Shareholders should evaluate carefully all information related to the SIB, consult their own financial, legal, investment, tax and other professional advisors and make their own decisions as to whether to tender shares pursuant to the SIB and, if so, how many shares to tender and at what price.

For the three months ended March 31, 2022

# **Operations Overview**

### **Reserves and Resources**

The 2P reserves attributable to IPC oil and gas assets are 270 MMboe as at December 31, 2021, as certified by independent third party reserves auditors. The reserves life index (RLI) as at December 31, 2021, is approximately 16 years. Best estimate contingent resources as at December 31, 2021, are 1,410 MMboe (unrisked). See "Reserves and Resources Advisory" below.

IPC set a balanced capital budget for 2022, targeting production growth across all regions whilst having a continued focus on free cash flow delivery to the business. In Canada, oil drilling activities commenced at the end of Q1 2022 at the Ferguson asset as planned. In Malaysia, the drilling and pump optimization program was successfully completed and in France drilling preparations are on-going for the Villeperdue West development project. IPC remains focused on organic growth and continues to mature future development projects across all operated assets, with a significant portfolio of drilling and optimization opportunities ready for sanction at the discretion of the Group.

#### **Production**

The average net production during Q1 2022 was above the high end of the first quarter CMD guidance range at 45,800 boepd. In Canada, exceptional production performance continued with ahead of expectations cold weather freeze off recovery at the Suffield Gas asset, supplemented by a new production record achieved at the Onion Lake Thermal asset in March 2022. In addition, strong performance from the Malaysian and French assets continued in Q1 2022 with excellent operational performance and facility uptime at the Bertam field in Malaysia and stable production performance in France.

The production during Q1 2022 with comparatives is summarized below:

Decidentian	Three mor Marc	Year ended December 31	
Production in Mboepd	2022	2021	2021
Crude oil			
Canada – Northern Assets	14.8	11.8	12.8
Canada – Southern Assets	8.4	8.8	8.6
Malaysia	4.1	4.0	4.4
France	2.9	2.9	3.0
Total crude oil production	30.2	27.5	28.8
Gas			
Canada – Northern Assets	0.1	0.1	0.1
Canada – Southern Assets	15.5	16.1	16.6
Total gas production	15.6	16.2	16.7
Total production	45.8	43.7	45.5
Quantity in MMboe	4.12	3.93	16.61

See "Supplemental Information regarding Product Types" in "Reserves and Resources Advisory".

- Oil Suffield	100%	7.4	7.6	7.5
- Oil Ferguson	100%	1.0	1.2	1.1
- Oil Other	50-100%	2.9	1.7	2.2
- Gas	99.7%1	15.6	16.2	16.7
Canada		38.8	36.8	38.1

<sup>&</sup>lt;sup>1</sup> On a well count basis

#### **Production**

Net production from IPC's Canadian assets during Q1 2022 was ahead of the CMD forecast at 38,800 boepd with continued strong reservoir performance and high production uptime at all the oil and gas producing assets. Suffield Gas continues to perform at the high end of its guidance range, with an earlier than forecast recovery from the early year cold weather freeze offs and the continued focus on production optimization from the field. The new oil export pipeline was tied-in and brought online at Onion Lake Thermal and the asset achieved record daily production rates in excess of 13,000 boepd at the end of Q1 2022.

## **Organic Growth and Capital Projects**

In Canada, a diverse program of drilling and optimization projects are budgeted for 2022. In addition, IPC has sanctioned the Blackrod Phase 1 commercial development Front End Engineering Design ("FEED") study for completion expected in late 2022.

At Onion Lake Thermal, the new Husky oil export pipeline was successfully brought online in Q1 2022, resulting in a material reduction in crude export via trucking. In addition, preparations for the next sustaining Pad L and two additional infill wells commenced at Onion Lake Thermal, with drilling operations on track to start at the end of the Q2 2022.

At Ferguson, IPC sanctioned the first phase of the planned field development, with planned 13 new horizontal producers and gas processing system capacity increases included as part of the program. As of the end of Q1 2022, the first three well pad has been drilled with first production on track for delivery in Q2 2022.

At Suffield Oil, building on the success of the N2N EOR project, preparations for two ASP injection and two production wells are ongoing with drilling operations on schedule for planned execution in Q3 2022.

Strong performance from the third well pair pilot project at the Blackrod asset continued through Q1 2022. Heat conformance and production performance remain ahead of expectation. As of the end Q1 2022, Blackrod Phase 1 commercial development FEED studies have commenced and are in line with schedule.

## **MALAYSIA**

Production		Three mor Marc	nths ended ch 31	Year ended December 31		
in Mboepd	WI	2022	2021	2021		
Bertam	100% 1	4.1	4.0	4.4		

<sup>&</sup>lt;sup>1</sup> 100% from April 10, 2021 (75% previously)

# **Production**

Net production from the Bertam field on Block PM307 during Q1 2022 was in line with CMD guidance at 4,100 boepd.

# **Organic Growth and Capital Projects**

In Malaysia, A15 side-track well drilling and a three production well pump upsizing project was sanctioned by IPC as part of the operational and capital budgets for 2022.

As of April 2022, the new A15 side-track production well and the planned three production well pump upgrades had been successfully executed and brought online. Production clean-up, performance testing and well rate optimization are ongoing.

# **Management's Discussion and Analysis**For the three months ended March 31, 2022

# **FRANCE**

Production			Three months ended March 31			
in Mboepd	WI	2022	2021	2021		
France						
- Paris Basin	100%1	2.5	2.5	2.6

		2.9	2.9	3.0		

<sup>&</sup>lt;sup>1</sup> Except for the working interest in the Dommartin Lettree field of 43%

# **Production**

Net production in France during Q1 2022 was in line with CMD guidance at 2,900 boepd with stable production and good uptime at the major producing fields.

# **Organic Growth**

In France, IPC sanctioned a three horizontal well development at Villeperdue West as part of the capital expenditure plans for 2022. IPC continues to mature future development projects in France, with focus towards the undeveloped resource base within the Paris Basin.

As of the end of Q1 2022, preparations for the three well development program at Villeperdue are ongoing with drilling operations on track for an expected Q4 2022 drilling start.

# Management's Discussion and Analysis For the three months ended March 31, 2022

# **Selected Interim Financial Information**

The Group operates within several geographical areas. Operating segments are reported at a country level, with Canada being further analyzed by main areas: (i) Canada - Northern Assets (comprising mainly of the Onion Lake Thermal asset) and (ii) Canada -Southern Assets (comprising of the Suffield assets and the Ferguson asset). This is consistent with the internal reporting provided to IPC management. The following tables present certain segment information.

### Three months ended March 31, 2022, Review

#### Revenue

Total revenue amounted to USD 261,306 thousand for Q1 2022 compared to USD 134,284 thousand for Q1 2021 and is analyzed as follows:

Three months ended March 31

	IVIdicii 3 i		
USD Thousands	2022	2021	
Crude oil sales	260,903	125,437	
Gas and NGL sales	30,443	19,836	
Change in under/overlift position	(6,113)	(4,130)	
Royalties	(23,988)	(7,281)	
Hedging settlement	(256)	(3,900)	
Other operating revenue	317	4,322	
Total revenue	261,306	134,284	

The main components of total revenue for Q1 2022 and Q1 2021, respectively are detailed below.

#### Crude oil sales

Three months ended – March 31, 2022

USD Thousands	Canada – Northern Assets	Canada – Southern Assets	Malaysia	France	Total
Crude oil sales					
- Revenue in USD thousands	124,307	66,923	36,014	33,659	260,903
- Quantity sold in bbls	1,578,764	849,717	290,293	351,323	3,070,097
- Average price realized USD per bbl	78.74	78.76	124.06	95.81	84.98

Three months ended – March 31, 2021

USD Thousands	Canada – Northern Assets	Canada – Southern Assets	Malaysia	France	Total
Crude oil sales					
- Revenue in USD thousands	50,554	38,679	13,033	23,171	125,437
- Quantity sold in bbls	1,188,133	867,169	201,132	358,842	2,615,276
- Average price realized USD per bbl	42.55	44.60	64.80	64.57	47.96

Crude oil revenue was more than double for Q1 2022 compared to Q1 2021 mainly due to higher oil prices caused by the tightening of the market following the recovery in demand and also by the conflict in Ukraine. Q1 2021 was impacted by the global Covid-19 outbreak causing a decrease in oil demand and prices.

The Suffield area assets and Onion Lake crude oil in Canada are blended with purchased condensate diluent volumes to meet pipeline specifications. As a result of the blended volumes, actual sales volumes are higher than produced volumes for Canada. The Canadian realized sales price is based on the Western Canadian Select ("WCS") price which trades at a discount to West Texas Intermediate ("WTI"). For Q1 2022, WTI averaged USD 95 per bbl compared to USD 58 per bbl for Q1 2021 and the average discount to WCS used in our pricing formula was USD 15 per bbl (USD 12 per bbl for Q1 2021).

The realized sales price for Malaysia and France is based on Dated Brent crude oil prices. There was one cargo lifting in Malaysia during Q1 2022 in March and one cargo lifting in Q1 2021. Produced unsold oil barrels from Bertam at the end of Q1 2022 amounted to 127,000 barrels, see Change in Inventory Position section below. There was also an Aquitaine cargo in France lifted in January 2022 at a realized price of USD 85 per bbl and one cargo lifted in Q1 2021. The average Dated Brent crude oil price was USD 102 per bbl for Q1 2022 compared to USD 61 per bbl for the comparative period.

For the three months ended March 31, 2022

## Gas and NGL sales

# Three months ended - March 31, 2022

	Canada – Southern Assets	Canada – Northern Assets	Total
Gas and NGL sales			
- Revenue in USD thousands	30,178	265	30,443
- Quantity sold in Mcf	7,670,925	66,189	7,737,114
- Average price realized USD per Mcf	3.93	4.00	3.93

### Three months ended - March 31, 2021

	Canada – Southern Assets	Canada – Northern Assets	Total
Gas and NGL sales			
- Revenue in USD thousands	19,705	131	19,836
- Quantity sold in Mcf	8,000,169	55,079	8,055,248
- Average price realized USD per Mcf	2.46	2.37	2.46

Gas and NGL sales revenue was 53% higher for Q1 2022 compared to Q1 2021 mainly due to the higher achieved gas price. Approximately 98% of the Suffield gas production was physically sold on the Alberta/Saskatchewan border with the remainder being delivered in Alberta based on AECO pricing plus a premium. For Q1 2022, IPC realized an average price of CAD 4.96 per Mcf compared to AECO average pricing of CAD 4.76 per Mcf and Empress average pricing of CAD 4.96 per Mcf for Q1 2022.

## **Hedging settlement**

IPC enters into risk management contracts in order to ensure a certain level of cash flow. It focuses mainly on oil price swaps and collars to limit pricing exposure. The oil and gas pricing contracts are not entered into for speculative purposes.

The realized hedging settlement for Q1 2022 amounted to a loss of USD 256 thousand and consisted of a loss of USD 487 thousand on the gas contracts and a gain of USD 231 thousand on the oil contracts. Also see the Financial Position and Liquidity and the Financial Risk Management sections below.

# Other operating revenue

Other operating revenue amounted to USD 317 thousand for Q1 2022 compared to USD 4,322 thousand for Q1 2021. Other operating revenue consists of lease fee income, tariff income and fees for strategic storage of inventory in France. The significant part of other operating revenue was third party lease fee income received by the Group for the leasing of the owned FPSO Bertam to the Bertam field in Malaysia until April 10, 2021. Following the withdrawal of Petronas Carigali Sdn Bhd from the Production Sharing Contract for the Bertam Field, and its interest being assigned to IPC, there is no such third party lease fee income after April 10, 2021. From this date, 100% of the lease income is eliminated from other operating revenue and the corresponding self-to-self lease fee is eliminated from operating costs, and IPC reports additional oil sales revenues associated with the assigned 25% working interest in the Bertam field.

# **Production costs**

Production costs including inventory movements amounted to USD 112,073 thousand for Q1 2022 compared to USD 65,622 thousand for Q1 2021, and is analyzed as follows:

# Three months ended - March 31, 2022

USD Thousands	Canada – Southern Assets	Canada – Northern Assets	Malaysia	France	Other <sup>3</sup>	Total
Operating costs <sup>1</sup>	27,216	25,220	13,636	10,963	(4,050)	72,985
USD/boe <sup>2</sup>	12.63	18.83	36.71	42.70	n/a	17.70
Cost of blending	9,703	32,938	-	-	-	42,641
Change in inventory position	395	(1,323)	(2,136)	(489)	_	(3,553)
Production costs	37,314	56,835	11,500	10,474	(4,050)	112,073

For the three months ended March 31, 2022

#### Three months ended - March 31, 2021

USD Thousands	Canada – Southern Assets	Canada – Northern Assets	Malaysia	France	Other <sup>3</sup>	Total
Operating costs <sup>1</sup>	23,619	17,208	17,136	10,153	(11,475)	56,641
USD/boe <sup>2</sup>	10.56	16.10	47.70	37.90	n/a	14.40
Cost of blending	5,928	12,516	-	_	-	18,444
Change in inventory position	(575)	(369)	(8,237)	(282)	_	(9,463)
Production costs	28,972	29,355	8,899	9,871	(11,475)	65,622

<sup>&</sup>lt;sup>1</sup> See definition on page 17 under "Non-IFRS measures".

# **Operating costs**

Operating costs amounted to USD 72,985 thousand for Q1 2022 compared to USD 56,641 thousand for Q1 2021. The increase in costs in Q1 2022 compared to Q1 2021 is due to higher gas prices for the Onion Lake Thermal project, higher chemical costs and increased activity. Operating costs per boe amounted to USD 17.70 per boe in Q1 2022 compared with USD 14.40 per boe in Q1 2021 and was above CMD guidance of USD 17.20 per boe for Q1 2022. As IPC produces more gas volumes to sell at Suffield than it purchases at Onion Lake Thermal, the increased gas price is an overall benefit to the Company.

#### Cost of blending

For the Suffield area assets in Canada, oil production is blended with purchased condensate diluent to meet pipeline specifications. As a result of the blending, actual sales volumes are higher than produced barrels and the realized sales price of a blended barrel is higher than an unblended barrel. Since July 2020, a portion of Onion Lake oil production is being blended and exported by pipeline. During Q1 2022, the Husky export pipeline from the field to the gathering system was commissioned and a greater portion of Onion Lake Thermal crude oil production is now expected to be blended and exported by pipeline improving the reliability and uptime of the production.

The cost of the diluent net of proceeds from the sale of surplus diluent amounted to USD 42,641 thousand for Q1 2022 compared to USD 18,444 thousand for Q1 2021. The increase is attributable to larger Onion Lake blending volumes and higher diluent prices in line with higher oil prices.

## Change in inventory position

The Bertam field in Malaysia is located offshore and production is lifted and sold from the FPSO Bertam when a cargo parcel size is reached. Accordingly, the timing of a lifting varies based on the inventory level on the FPSO facility and the change in inventory position varies, both positively and negatively, from period to period. Inventories are valued at the lower of cost including depletion, and market value, and the difference in the valuation between period ends is reflected in the change in inventory position in the statement of operations. At the end of Q1 2022, IPC had crude entitlement of 127,000 barrels of oil on the FPSO Bertam facility (crude produced but unsold).

# **Depletion and decommissioning costs**

The total depletion and decommissioning costs amounted to USD 27,952 thousand for Q1 2022 compared to USD 28,070 thousand for Q1 2021. The depletion charge is analyzed in the following tables:

## Three months ended – March 31, 2022

USD Thousands	Canada – Southern Assets	Canada – Northern Assets	Malaysia	France	Total
Depletion cost in USD thousands	9,972	7,887	6,689	3,404	27,952
USD per boe	4.63	5.89	18.01	13.26	6.78

# Three months ended - March 31, 2021

USD Thousands	Canada – Southern Assets	Canada – Northern Assets	Malaysia	France	Total
Depletion cost in USD thousands	10,406	6,840	6,769	4,055	28,070
USD per boe	4.65	6.40	18.84	15.14	7.14

The depletion charge is derived by applying the depletion rate per boe to the volumes produced in the period by each field.

<sup>&</sup>lt;sup>2</sup> USD/boe in the tables above is calculated by dividing the cost by the production volume for each country for the period.

<sup>&</sup>lt;sup>3</sup> Included in the Malaysia operating costs is the lease cost for the FPSO Bertam which is owned by the Group. Other represents the FPSO Bertam lease fee self-to-self payment elimination. Netting the self-to-self elimination against the operating costs in Malaysia reduces the operating cost per boe for Malaysia to USD 25.80 and USD 15.76 for Q1 2022 and Q1 2021, respectively.

For the three months ended March 31, 2022

## Depreciation of other tangible fixed assets

The total depreciation of other tangible fixed assets amounted to USD 2,080 thousand for Q1 2022 compared to USD 2,269 thousand for Q1 2021. This related to the depreciation of the FPSO Bertam, which is being depreciated on a unit of production basis based on the Bertam field 2P reserves.

### **Exploration and business development costs**

The total exploration and business developments costs amounted to USD 101 thousand for Q1 2022. These costs mainly related to business development costs.

## General, administrative and depreciation expenses

General, administrative and depreciation expenses amounted to USD 4,173 thousand for Q1 2022, compared to USD 2,818 thousand for Q1 2021.

#### Net financial items

Net financial items amounted to a charge of USD 6,607 thousand for Q1 2022, compared to a charge of USD 8,492 thousand for Q1 2021, and included a non-cash net foreign exchange gain of USD 3,059 thousand for Q1 2022 compared to a net foreign exchange loss of USD 678 thousand for Q1 2021. The foreign exchange movements mainly result from the revaluation of intragroup loan funding balances.

Excluding foreign exchange movements, the net financial items amounted to a charge of USD 9,666 thousand for Q1 2022, compared to USD 7,814 thousand for Q1 2021.

The interest expense amounted to USD 4,034 thousand for Q1 2022, compared to interest expense USD 3,999 thousand for the comparative period in 2021. Despite the lower borrowings in Q1 2022, the cost of financing remained at similar level as Q1 2021 following the addition of the accrued interest on the USD 300 million bonds issued in early February 2022.

Following the repayment of the outstanding reserve-based lending (RBL) credit facilities with a portion of the Bonds proceeds, the loan fees have been fully expensed during Q1 2022 and amounted to USD 2,139 thousand for Q1 2022 compared to USD 590 thousand for the comparative period in 2021.

The unwinding of the asset retirement obligation discount rate amounted to USD 2,760 thousand for Q1 2022, compared to USD 2,857 thousand for Q1 2021.

## Income tax

The corporate income tax amounted to a charge of USD 27,498 thousand for Q1 2022, compared to a credit of USD 271 thousand for Q1 2021. The income tax movements in Q1 2022 mainly relate to deferred taxes with low cash taxes reflected. No corporate income tax is payable in Canada and Malaysia in Q1 2022 due to the usage of historical tax pools.

# **Capital Expenditure**

Development and exploration and evaluation expenditure incurred in Q1 2022, was as follows:

USD Thousands	Canada – Southern Assets	Canada – Northern Assets	Malaysia	France	Total
Development	7,441	6,123	26,372	489	40,425
Exploration and evaluation		(2,113)	37	4	(2,072)
	7,441	4,010	26,409	493	38,353

Capital expenditure of USD 38,353 thousand was mainly spent in Malaysia on the A15 sidetrack well completion and on the production well pump upgrades.

Net revenues from the Blackrod appraisal project in Canada is being offset against exploration and evaluation capitalized costs.

# Other tangible fixed assets

Other tangible fixed assets amounted to USD 43,657 thousand as at March 31, 2022, which included USD 41,119 thousand in respect of the FPSO Bertam. The FPSO Bertam is being depreciated on a unit of production basis based on the Bertam field 2P reserves.

For the three months ended March 31, 2022

#### **Financial Position and Liquidity**

#### Financing

In May 2020, IPC entered into a EUR 13 million unsecured credit facility in France (the "France Facility") under a financial assistance program instituted by the French government. In April 2021, IPC extended the France Facility until May 2026, with quarterly repayments commencing in August 2022. The France Facility amount was fully drawn as at March 31, 2022.

In 2021, the Group had a reserve-based lending credit facility of USD 100 million (the "International RBL") with a maturity to end of December 2024 in connection with its oil and gas assets in France and Malaysia. In addition, the Group had a reserve-based lending credit facility of CAD 300 million (the "Canadian RBL") with a maturity date in May 2023, in connection with its oil and gas assets in Canada.

In February 2022, IPC completed the issuance of USD 300 million of senior unsecured bonds (the "Bonds"), which mature in February 2027 and have a fixed coupon rate of 7.25 percent per annum, payable in semi-annual instalments. The Group used a portion of the proceeds of the Bonds to fully repay the Canadian RBL and the International RBL, which were then cancelled. At the same time, the Group entered into a revolving credit facility of CAD 75 million (the "Canadian RCF") in connection with its oil and gas assets in Canada. The Canadian RCF has a maturity of February 2024 and no cash amounts under the Canadian RCF were drawn at March 31, 2022.

Total net debt as at March 31, 2022 amounted to USD 42 million.

The amounts drawn under the Bonds as at March 31, 2022, are classified as non-current as there are no mandatory repayments within the next twelve months.

An amount of USD 2.6 million drawn under the France Facility as at March 31, 2022 is classified as current representing the repayment planned within the next twelve months.

The Group is in compliance with the covenants of the Bonds and its financing facilities as at March 31, 2022.

Cash and cash equivalents held amounted to USD 272.0 million as at March 31, 2022.

## **Working Capital**

As at March 31, 2022, the Group had a net working capital balance including cash of USD 311,183 thousand compared to USD 56,181 thousand as at December 31, 2021. The difference as at March 31, 2022, from December 31, 2021, is mainly a result of the higher cash balances held following the Bonds issue and higher trade receivables due to the higher oil price.

# **Non-IFRS Measures**

In addition to using financial measures prescribed under IFRS, references are made in this MD&A to "operating cash flow", "free cash flow", "EBITDA", "operating costs" and "net debt"/"net cash", which are non-IFRS measures. Non-IFRS measures do not have any standardized meaning prescribed by IFRS and therefore may not be comparable to similar measures presented by other public companies. Non-IFRS measures should not be considered in isolation or as a substitute for measures prepared in accordance with IFRS.

The Corporation uses non-IFRS measures to provide investors with supplemental measures to assess cash generated by and the financial performance and condition of the Corporation. Management also uses non-IFRS measures internally in order to facilitate operating performance comparisons from period to period, prepare annual operating budgets and assess the Group's ability to meet its future capital expenditure and working capital requirements. Management believes these non-IFRS measures are important supplemental measures of operating performance because they highlight trends in the core business that may not otherwise be apparent when relying solely on IFRS financial measures. Management believes such measures allow for assessment of the Group's operating performance and financial condition on a basis that is more consistent and comparable between reporting periods. The Corporation also believes that securities analysts, investors and other interested parties frequently use non-IFRS measures in the evaluation of public companies. Forward-looking statements are provided for the purpose of presenting information about management's current expectations and plans relating to the future and readers are cautioned that such statements may not be appropriate for other purposes.

"Operating cash flow" is calculated as revenue less production costs less current tax. Operating cash flow is used to analyze the amount of cash that is being generated available for capital investment and servicing debt.

"Free cash flow" is calculated as operating cash flow less capital expenditures less decommissioning and farm-in expenditures less general, administration and depreciation expenses before depreciation and less cash financial items. Free cash flow is used to analyze the amount of cash that is being generated by the business and that is available for such purposes as repaying debt, funding acquisitions and returning capital to shareholders.

"EBITDA" is calculated as net result before financial items, taxes, depletion of oil and gas properties, exploration costs, impairment costs and depreciation and adjusted for non-recurring profit/loss on sale of assets and other income.

For the three months ended March 31, 2022

#### **Reconciliation of Non-IFRS Measures**

## Operating cash flow

The following table sets out how operating cash flow is calculated from figures shown in the Financial Statements:

	Three months ended March 31		
USD Thousands	2022	2021	
Revenue	261,306	134,284	
Production costs	(112,073)	(65,622)	
Current tax	(4,123)	(941)	
Operating cash flow	145,110	67,721	

## Free cash flow

The following table sets out how free cash flow is calculated from figures shown in the Financial Statements:

	Three months ended March 31	
USD Thousands	2022	2021
Operating cash flow - see above	145,110	67,721
Capital expenditures	(38,353)	(11,671)
Abandonment and farm-in expenditures <sup>1</sup>	(1,925)	(333)
General, administration and depreciation expenses before depreciation <sup>2</sup>	(3,770)	(2,399)
Cash financial items³	(4,583)	(4,367)
Free cash flow	96,479	48,951

<sup>&</sup>lt;sup>1</sup> See note 16 to the Financial Statements

## **EBITDA**

The following table sets out the reconciliation from net result from the consolidated statement of operations to EBITDA:

	Three months ended March 31	
USD Thousands	2022	2021
Net result	80,822	26,891
Net financial items	6,607	8,492
Income tax	27,498	(271)
Depletion	27,952	28,070
Depreciation of other tangible fixed assets	2,080	2,269
Exploration and business development costs	101	393
Depreciation included in general, administration and depreciation expenses <sup>1</sup>	403	419
EBITDA	145,463	66,263

<sup>&</sup>lt;sup>1</sup> Item is not shown in the Financial Statements.

<sup>&</sup>quot;Operating cost" is calculated as production costs excluding any change in the inventory position and the cost of blending and is used to analyze the cash cost of producing the oil and gas volumes.

<sup>&</sup>quot;Net debt" is calculated as bank loans and Bonds less cash and cash equivalents. "Net cash" is calculated as cash and cash equivalents less bank loans and Bonds.

<sup>&</sup>lt;sup>2</sup> Depreciation is not specifically disclosed in the Financial Statements

<sup>&</sup>lt;sup>3</sup> See notes 5 and 6 to the Financial Statements.

For the three months ended March 31, 2022

#### **Operating costs**

The following table sets out how operating costs is calculated:

	I nree months ended March 31		
USD Thousands	2022	2021	
Production costs	112,073	65,622	
Cost of blending	(42,641)	(18,444)	
Change in inventory position	3,553	9,463	
Operating costs	72,985	56,641	

Three months anded March 21

#### Net debt

The following table sets out how net debt is calculated from figures shown in the Financial Statements:

USD Thousands	March 31, 2022	December 31, 2021
Bank loans	14,400	113,122
Bonds	300,000	_
Cash and cash equivalents	(272,033)	(18,810)
Net debt	42,367	94,312

#### **Off-Balance Sheet Arrangements**

IPC, through its subsidiary IPC Canada Ltd, has issued two letters of credit as follows: (a) CAD 2.6 million in respect of its obligations to purchase diluent; and (b) CAD 700,000 in respect of its obligations related to the Ferguson asset, increasing by CAD 100,000 annually to a maximum of CAD 1,000,000.

# **Outstanding Share Data**

The common shares of IPC trade on both the Toronto Stock Exchange and the Nasdaq Stockholm.

As at January 1, 2021, IPC had a total of 155,342,757 common shares issued and outstanding.

Following the exercise of stock options during February 2021, the number of issued and outstanding common shares of the Corporation increased by 25,000 to 155,367,757 common shares.

On December 1, 2021, IPC announced the commencement of a share repurchase program. During the period up to December 31, 2021, IPC repurchased an aggregate of 1,330,303 common shares, of which 169,652 shares were cancelled at December 31, 2021. As at December 31, 2021, IPC had a total of 155,198,105 common shares issued and outstanding with voting rights.

As at May 3, 2022, following the cancellation during Q1 2022 of a further 4,232,092 common shares repurchased, IPC has a total of 150,966,013 common shares issued and outstanding with no par value.

Nemesia S.à.r.l., an investment company wholly owned by a Lundin family trust, owns 40,697,533 common shares in IPC, representing 27.0% of the outstanding common shares as at May 3, 2022.

In addition, IPC has 117,485,389 outstanding class A preferred shares, issued as a part of an internal corporate structuring to a wholly-owned subsidiary of IPC. Such preferred shares are not listed on any stock exchange and do not carry the right to vote on matters to be decided by the holders of IPC's common shares.

IPC has 6,115,955 IPC Share Unit Plan awards (992,401 awards granted in July 2019, 10,703 awards granted in January 2020, 1,217,402 awards granted in March 2020, 25,335 awards granted in July 2020, 21,216 awards granted in January 2021, 679,140 awards granted in March 2021, 1,716,000 awards granted in May 2021, 10,067 awards granted in July 2021 and 12,543 awards granted in January 2022, 1,431,148 awards granted in March 2022) outstanding as at May 3, 2022.

For the three months ended March 31, 2022

## **Contractual Obligations and Commitments**

In Canada, an oil pipeline from the Onion Lake Thermal field to the Husky Alberta Gathering System has been built by Husky Midstream ("Husky") for the exclusive use of IPC. Onion Lake Thermal oil production is blended with condensate before being transported via the pipeline and is therefore expected to attract improved realized prices as a result of the blended oil. The pipeline is also expected to improve the reliability and uptime of the transportation and production at Onion Lake Thermal. The initial investment in the pipeline was met by Husky and is to be recovered through an agreed tariff charged to IPC. IPC has committed to a firm transportation service for 15 years from commencement of service, with total tariffs committed as shown in the table below:

	20221	2023	2024	2025	2026	Thereafter
Transportation service (MCAD)	20.2	27.3	28.0	28.4	29.0	303.3

<sup>&</sup>lt;sup>1</sup> Commissioning of the pipeline and commencement of the service occurs start April 1, 2022.

The initial tariffs escalate at 2% per annum and approximately 70% of the forecast cost for 2022 is reflected in the 2022 CMD guidance of operating costs of USD 15.2 per boe which is in line with the actual 2021 operating costs of USD 15.0 per boe. The remaining 30% of the forecast cost for 2022 is also reflected in the CMD cost of blending guidance.

In Malaysia, IPC has an obligation to make payments towards historic costs on Block PM307 payable on the Bertam field for every 1 MMboe gross that the field produces above 10 MMboe gross. The estimated liability based on current 2P reserves has been provided for in the Group's Balance Sheet – see Note 21 Provisions of the Financial Statements.

## **Critical Accounting Policies and Estimates**

In connection with the preparation of the Corporation's consolidated financial statements, management has made assumptions and estimates about future events and applied judgments that affect the reported values of assets, liabilities, revenues, expenses and related disclosures. These assumptions, estimates and judgments are based on historical experience, current trends and other factors that they believe to be relevant at the time the financial statements are prepared. The management reviews the accounting policies, assumptions, estimates and judgments to ensure that the financial statements are presented fairly in accordance with IFRS. However, because future events and their effects cannot be determined with certainty, actual results could differ from these assumptions and estimates, and such differences could be material.

#### **Transactions with Related Parties**

Lundin Energy has charged the Group USD 158 thousand in respect of office space rental and USD 400 thousand in respect of shared services provided during the Q1 2022.

All transactions with related parties are in the normal course of business and are made on the same terms and conditions as with parties at arm's length.

# **Financial Risk Management**

As an international oil and gas exploration and production company, IPC is exposed to financial risks such as interest rate risk, currency risk, credit risk, liquidity risks as well as the risk related to the fluctuation in the oil price. The Group seeks to control these risks through sound management practice and the use of internationally accepted financial instruments, such as oil and gas price, interest rate or foreign exchange hedges as the case may be. Financial instruments will be solely used for the purpose of managing risks in the business. As at March 31, 2022, the Corporation had entered into oil and gas price hedges – see below.

Management believes that the cash resources, other current assets and cash flow from operations are sufficient to finance the Group's operations and capital expenditures program over the next year.

## **Capital Management**

The Group's objectives when managing capital are to safeguard the Group's ability to continue as a going concern and to meet its committed financial liabilities and work program requirements in order to create shareholder value. The Group may put in place new bonds or credit facilities, repay debt, or pursue other such restructuring activities as appropriate.

Management of the Corporation will continuously monitor and manage the Group's capital, liquidity and net debt position in order to assess the requirement for changes to the capital structure to meet the objectives and to maintain flexibility.

#### **Price of Oil and Gas**

Prices of oil and gas are affected by the normal economic drivers of supply and demand as well as by financial investors and market uncertainty. Factors that influence these prices include operational decisions, prices of competing fuels, natural disasters, economic conditions, transportation constraints, political instability or conflicts or actions by major oil exporting countries. Price fluctuations will affect the Group's financial position.

For the three months ended March 31, 2022

Based on analysis of the circumstances, the management assesses the benefits of forward hedging monthly sales contracts for the purpose of protecting cash flow. If management believes that a hedging contract will appropriately help manage cash flow then it may choose to enter into a commodity price hedge. In addition, see the Financial Position and Liquidity section above regarding applicable credit facility covenants to hedge future production.

The Group had gas price sale financial hedges outstanding as at March 31, 2022, which are summarized as follows:

Period	Volume (Gigajoules (GJ) per day)	Type	Average Pricing
April 1, 2022 – September 30, 2022	35,000	AECO Swap	CAD 3.41/GJ

The Group had oil price sale financial hedges outstanding as at March 31, 2022, which are summarized as follows:

Period Volume (barrels per day)		Type	Average Pricing	
April 1, 2022 - June 30, 2022	11,900	WCS/WTI Differential	USD - 13.06/bbl	
July 1, 2022 – December 31, 2022	16,000	WCS/WTI Differential	USD - 13.04/bbl	

All of the above hedges are treated as effective and changes to the fair value are reflected in other comprehensive income.

These hedges had a negative fair value of USD 11,987 thousand at March 31, 2022.

#### **Currency Risk**

The Group's policy on currency rate hedging is, in the case of currency exposure, to consider fixing the rate of exchange. The Group will take into account the currency exposure, current rates of exchange and market expectations in comparison to historic trends and volatility in making the decision to hedge.

#### **Interest Rate Risk**

Interest rate risk is the risk to earnings due to uncertain future interest rates on borrowings. The Group will take into account the level of external debt, current interest rates and market expectations in comparison to historic trends and volatility in making the decision to hedge.

# **Credit Risk**

The Group may be exposed to third party credit risk through contractual arrangements with counterparties who buy the Group's hydrocarbon products. The Group's policy is to limit credit risk by only entering into oil and gas sales agreements with reputable and creditworthy oil and gas and trading companies. Where it is determined that there is a credit risk for oil and gas sales, the Group's policy is to require credit enhancement from the purchaser.

The Group's policy on joint venture parties is to rely on the provisions of the underlying joint operating agreements to take possession of the licence or the joint venture partner's share of production for non-payment of cash calls or other amounts due. In addition, cash is to be held and transacted only through major banks.

## **RISK AND UNCERTAINTIES**

IPC is engaged in the exploration, development and production of oil and gas and is exposed to various operational, environmental, market and financial risks and uncertainties. For further information and discussion of these risks and uncertainties, please see IPC's Annual Information Form for the year ended December 31, 2021 ("AIF") available on SEDAR at www.sedar.com or on IPC's website at www.international-petroleum.com. See also "Cautionary Statement Regarding ForwardLooking Information" and "Reserves and Resource Advisory" in this MD&A.

The current and any future Covid-19 outbreaks may increase IPC's exposure to, and magnitude of, each of the risks and uncertainties identified in the AIF or this MD&A that result from, for example, a reduction in demand for oil and gas consumption, lower or volatile commodity prices, reliance on third parties, operational risks and costs and changes in government regulation. The extent to which Covid-19 impacts IPC's business, results of operations and financial condition will depend on future developments, which are highly uncertain and are difficult to predict, including, but not limited to, the duration and spread of any Covid-19 outbreaks, their severity, the actions taken to contain such outbreaks or treat their impact, and how quickly and to what extent normal economic and operating conditions resume and their impacts to IPC's business, results of operations and financial condition which could be more significant in upcoming periods as compared with previous periods. Even after the Covid-19 outbreaks have subsided, IPC may continue to experience materially adverse impacts to IPC's business as a result of the global economic impact of the pandemic.

For the three months ended March 31, 2022

#### DISCLOSURE CONTROLS AND INTERNAL CONTROL OVER FINANCIAL REPORTING

#### **Disclosure Controls and Procedures**

Disclosure controls and procedures have been designed to provide reasonable assurance that information required to be disclosed by the Corporation in its annual filings, interim filings or other reports filed or submitted by it under securities legislation is recorded, processed, summarized and reported within the time periods specified in the securities legislation. Management, under the supervision of the Chief Executive Officer and the Chief Financial Officer, is responsible for the design and operation of disclosure controls and procedures.

#### Internal Controls over Financial Reporting

Management is also responsible for the design of the Group's internal controls over financial reporting in order to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with IFRS. However, due to inherent limitations, internal control over financial reporting may not prevent or detect all misstatements and fraud.

There have been no material changes to the Groups internal control over financial reporting during the three month periods ended March 31, 2022, that have materially affected, or are reasonably likely to materially affect, the Group's internal control over financial reporting.

#### **Control Framework**

Management assesses the effectiveness of the Corporation's internal control over financial reporting using the Internal Control – Integrated Framework (2013 Framework) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

#### CAUTIONARY STATEMENT REGARDING FORWARD-LOOKING INFORMATION

This MD&A contains statements and information which constitute "forward-looking statements" or "forward-looking information" (within the meaning of applicable securities legislation). Such statements and information (together, "forward-looking statements") relate to future events, including the Corporation's future performance, business prospects or opportunities. Actual results may differ materially from those expressed or implied by forward-looking statements. The forward-looking statements contained in this MD&A are expressly qualified by this cautionary statement. Forward-looking statements speak only as of the date of this MD&A, unless otherwise indicated. IPC does not intend, and does not assume any obligation, to update these forward-looking statements, except as required by applicable laws.

The Covid-19 virus and the restrictions and disruptions related to it had a material effect on the world demand for, and prices of, oil and gas as well as the market price of the shares of oil and gas companies generally. Although demand, commodity prices and share prices have recovered, there can be no assurance that these effects will not resume or that commodity prices will not decrease or remain volatile in the future. These factors are beyond the control of the Corporation and it is difficult to assess how these, and other factors, will continue to affect the Corporation and the market price of IPC's common shares. In light of the current situation, as at the date of this MD&A, the Corporation continues to review and assess its business plans and assumptions regarding the business environment, as well as its estimates of future production, cash flows, operating costs and capital expenditures.

All statements other than statements of historical fact be forward-looking statements. Any statements that express or involve discussions with respect to predictions, expectations, beliefs, plans, projections, forecasts, guidance, budgets, objectives, assumptions or future events or performance (often, but not always, using words or phrases such as "seek", "anticipate", "plan", "continue", "estimate", "expect", "may", "will", "project", "forecast", "predict", "potential", "targeting", "intend", "could", "might", "should", "believe", "budget" and similar expressions) are not statements of historical fact and may be "forward-looking statements".

For the three months ended March 31, 2022

Forward-looking statements include, but are not limited to, statements with respect to:

- IPC's ability to maximize liquidity and financial flexibility in connection with the current and any future Covid-19 outbreaks;
- The potential for an improved future economic environment, including resulting from a lack of capital investment and drilling in the oil and gas industry;
- 2022 production range, operating costs and capital and decommissioning expenditure estimates;
- Estimates of future production, cash flows, operating costs and capital expenditures that are based on IPC's current business plans and assumptions regarding the business environment, which are subject to change;
- IPC's financial and operational flexibility to continue to react to recent events and navigate the Corporation through periods of volatile commodity prices;
- IPC's continued access to its credit facilities, including current financial headroom, on terms acceptable to the Corporation;
- The ability to fully fund future expenditures and share repurchases from cash flows and current borrowing capacity;
- IPC's ability to maintain operations, production and business in light of the current and any future Covid-19 outbreaks and the restrictions and disruptions related thereto, including risks related to production delays and interruptions, changes in laws and regulations and reliance on third-party operators and infrastructure;
- IPC's intention and ability to continue to implement our strategies to build long-term shareholder value;
- The ability of IPC's portfolio of assets to provide a solid foundation for organic and inorganic growth;
- The continued facility uptime and reservoir performance in IPC's areas of operation;
- Future development potential of the Suffield and Ferguson operations in Canada, including the timing and success of future oil and gas drilling and optimization programs;
- Development of the Blackrod project in Canada, including estimates of resource volumes, future production, timing, breakeven oil prices and net present values;
- Current and future drilling pad production and timing and success of facility upgrades, tie-in work and infill drilling at Onion Lake Thermal;
- The potential improvement in the Canadian oil egress situation and IPC's ability to benefit from any such improvements;
- The timing and success of the future development projects and other organic growth opportunities in France;
- The ability to maintain current and forecast production in France:
- The timing and success of the Villeperdue West development project in France;
- The ability of IPC to achieve and maintain current and forecast production in Malaysia;
- The success of the drilling of the A15 sidetrack well and of the production well pump rate optimization project in Malaysia;
- The commencement, timing, completion and the results of the substantial issuer bid (SIB);
- The ability to IPC to acquire common shares under the SIB or further common shares under the NCIB, including the timing of any such purchases;
- The return of value to IPC's shareholders as a result of the SIB or the NCIB;
- The ability of IPC to implement future shareholder distributions in addition to the SIB and the NCIB;
- IPC's ability to implement its greenhouse gas ("GHG") emissions intensity and climate strategies and to achieve its net GHG
  emissions intensity reduction targets;
- · Estimates of reserves and contingent resources;
- · The ability to generate free cash flows and use that cash to repay debt;
- IPC's ability to identify and complete future acquisitions; and
- Future drilling and other exploration and development activities.

Statements relating to "reserves" and "contingent resources" are also deemed to be forward-looking statements, as they involve the implied assessment, based on certain estimates and assumptions, that the reserves and resources described exist in the quantities predicted or estimated and that the reserves and resources can be profitably produced in the future. Ultimate recovery of reserves or resources is based on forecasts of future results, estimates of amounts not yet determinable and assumptions of management. See also "Reserves and Resource Advisory".

The forward-looking statements are based on certain key expectations and assumptions made by IPC, including expectations and assumptions concerning: prevailing commodity prices and currency exchange rates; applicable royalty rates and tax laws; interest rates; future well production rates and reserve and contingent resource volumes; operating costs; the timing of receipt of regulatory approvals; the performance of existing wells; the success obtained in drilling new wells; anticipated timing and results of capital expenditures; the sufficiency of budgeted capital expenditures in carrying out planned activities; the timing, location and extent of future drilling operations; the successful completion of acquisitions and dispositions; the benefits of acquisitions; the state of the economy and the exploration and production business in the jurisdictions in which IPC operates and globally; the availability and cost of financing, labour and services; and the ability to market crude oil, natural gas and natural gas liquids successfully.

Although IPC believes that the expectations and assumptions on which such forward-looking statements are based are reasonable, undue reliance should not be placed on the forward-looking statements because IPC can give no assurances that they will prove to be correct. Since forward-looking statements address future events and conditions, by their very nature they involve inherent risks and uncertainties. Actual results could differ materially from those currently anticipated due to a number of factors and risks.

For the three months ended March 31, 2022

These include, but are not limited to:

- The risks associated with the oil and gas industry in general such as operational risks in development, exploration and production;
- Delays or changes in plans with respect to exploration or development projects or capital expenditures;
- The uncertainty of estimates and projections relating to reserves, resources, production, revenues, costs and expenses;
- Health, safety and environmental risks;
- · Commodity price fluctuations;
- Interest rate and exchange rate fluctuations;
- Marketing and transportation;
- Loss of markets;
- Environmental and climate-related risks;
- Competition:
- Incorrect assessment of the value of acquisitions;
- Failure to complete or realize the anticipated benefits of acquisitions or dispositions;
- The ability to access sufficient capital from internal and external sources;
- Failure to obtain required regulatory and other approvals; and
- · Changes in legislation, including but not limited to tax laws, royalties, environmental and abandonment regulations.

Readers are cautioned that the foregoing list of factors is not exhaustive. See also "Risk and Uncertainties"

Estimated free cash flow generation is based on IPC's current business plans over the period of 2022 to 2026. Assumptions include average net production of approximately 47 Mboepd, average Brent oil prices of USD 65 to 95 per boe escalating by 2% per year, average gas prices of CAD 3.00 per thousand cubic feet, and average Brent to Western Canadian Select differentials as estimated by IPC's independent reserves evaluator and as further described in the AIF. IPC's current business plans and assumptions, and the business environment, are subject to change. Actual results may differ materially from forward-looking estimates and forecasts.

Additional information on these and other factors that could affect IPC, or its operations or financial results, are included in the Financial Statements, the Corporation's Annual Information Form (AIF) for the year ended December 31, 2021, (See "Cautionary Statement Regarding Forward-Looking Information", "Reserves and Resources Advisory" and "Risk and Uncertainties") and other reports on file with applicable securities regulatory authorities, including previous financial reports, management's discussion and analysis and material change reports, which may be accessed through the SEDAR website (www.sedar.com) or IPC's website (www.international-petroleum.com).

#### **RESERVES AND RESOURCES ADVISORY**

This MD&A contains references to estimates of gross and net reserves and resources attributed to the Corporation's oil and gas assets. Gross reserves / resources are the working interest (operating or non-operating) share before deduction of royalties and without including any royalty interests. Net reserves / resources are the working interest (operating or non-operating) share after deduction of royalty obligations, plus royalty interests in reserves/resources, and in respect of PSCs in Malaysia, adjusted for cost and profit oil. Unless otherwise indicated, reserves / resource volumes are presented on a gross basis.

Reserve estimates, contingent resource estimates and estimates of future net revenue in respect of IPC's oil and gas assets in Canada are effective as of December 31, 2021, and are included in the reports prepared by Sproule Associates Limited (Sproule), an independent qualified reserves evaluator, in accordance with National Instrument 51-101 – Standards of Disclosure for Oil and Gas Activities (NI 51-101) and the Canadian Oil and Gas Evaluation Handbook (the COGE Handbook) and using Sproule's December 31, 2021 price forecasts.

Reserve estimates, contingent resource estimates and estimates of future net revenue in respect of IPC's oil and gas assets in France and Malaysia are effective as of December 31, 2021, and are included in the report prepared by ERC Equipoise Ltd. (ERCE), an independent qualified reserves auditor, in accordance with NI 51-101 and the COGE Handbook, and using Sproule's December 31, 2021 price forecasts.

The price forecasts used in the Sproule and ERCE reports are available on the website of Sproule (sproule.com) and are contained in the AIF. These price forecasts are as at December 31, 2021 and may not be reflective of current and future forecast commodity prices.

The reserve life index (RLI) is calculated by dividing the 2P reserves of 270 MMboe as at December 31, 2021, by the mid-point of the 2022 CMD production guidance of 46,000 to 48,000 boepd.

The product types comprising the 2P reserves described in this MD&A are contained in the AIF. See also "Supplemental Information regarding Product Types" below. Light, medium and heavy crude oil reserves/resources disclosed in this MD&A include solution gas and other by-products.

"2P reserves" means proved plus probable reserves. "Proved reserves" are those reserves that can be estimated with a high degree of certainty to be recoverable. It is likely that the actual remaining quantities recovered will exceed the estimated proved reserves. "Probable reserves" are those additional reserves that are less certain to be recovered than proved reserves. It is equally likely that the actual remaining quantities recovered will be greater or less than the sum of the estimated proved plus probable reserves.

For the three months ended March 31, 2022

Each of the reserves categories reported (proved and probable) may be divided into developed and undeveloped categories. "Developed reserves" are those reserves that are expected to be recovered from existing wells and installed facilities or, if facilities have not been installed, that would involve a low expenditure (for example, when compared to the cost of drilling a well) to put the reserves on production. The developed category may be subdivided into producing and non-producing. "Developed producing reserves" are those reserves that are expected to be recovered from completion intervals open at the time of the estimate. These reserves may be currently producing or, if shut-in, they must have previously been on production, and the date of resumption of production must be known with reasonable certainty. "Developed non-producing reserves" are those reserves that either have not been on production, or have previously been on production, but are shut-in, and the date of resumption of production is unknown. "Undeveloped reserves" are those reserves expected to be recovered from known accumulations where a significant expenditure (for example, when compared to the cost of drilling a well) is required to render them capable of production. They must fully meet the requirements of the reserves classification (proved, probable) to which they are assigned.

Contingent resources are those quantities of petroleum estimated, as of a given date, to be potentially recoverable from known accumulations using established technology or technology under development, but which are not currently considered to be commercially recoverable due to one or more contingencies. Contingencies are conditions that must be satisfied for a portion of contingent resources to be classified as reserves that are: (a) specific to the project being evaluated; and (b) expected to be resolved within a reasonable timeframe. Contingencies may include factors such as economic, legal, environmental, political, and regulatory matters, or a lack of markets. It is also appropriate to classify as contingent resources the estimated discovered recoverable quantities associated with a project in the early evaluation stage. Contingent resources are further classified in accordance with the level of certainty associated with the estimates and may be sub-classified based on a project maturity and/or characterized by their economic status.

There are three classifications of contingent resources: low estimate, best estimate and high estimate. Best estimate is a classification of estimated resources described in the COGE Handbook as the best estimate of the quantity that will be actually recovered. It is equally likely that the actual remaining quantities recovered will be greater or less than the best estimate. If probabilistic methods are used, there should be at least a 50% probability that the quantities actually recovered will equal or exceed the best estimate.

Contingent resources are further classified based on project maturity. The project maturity subclasses include development pending, development on hold, development unclarified and development not viable. All of the Corporation's contingent resources are classified as either development on hold or development unclarified. Development on hold is defined as a contingent resource where there is a reasonable chance of development, but there are major non-technical contingencies to be resolved that are usually beyond the control of the operator. Development unclarified is defined as a contingent resource that requires further appraisal to clarify the potential for development and has been assigned a lower chance of development until commercial considerations can be clearly defined. Chance of development is the probability of a project being commercially viable.

References to "unrisked" contingent resources volumes means that the reported volumes of contingent resources have not been risked (or adjusted) based on chance of commerciality. In accordance with the COGE Handbook guidance for contingent resources, the chance of commerciality is solely based on the chance of development associated with resolution of all contingencies required for the re-classification of the contingent resources as reserves. Reported unrisked volumes of contingent resources do not reflect the risking (or adjustment) of such volumes based on the chance of development of such resources.

The contingent resources reported in the MD&A are estimates only. The estimates are based upon a number of factors and assumptions each of which contains estimation error which could result in future revisions of the estimates as more technical and commercial information becomes available. The estimation factors include, but are not limited to, the mapped extent of the oil and gas accumulations, geologic characteristics of the reservoirs, and dynamic reservoir performance. There are numerous risks and uncertainties associated with recovery of such resources, including many factors beyond the Corporation's control. There is uncertainty that it will be commercially viable to produce any portion of the contingent resources referred to in the MD&A.

2P reserves and contingent resources included in the reports prepared by Sproule and ERCE in respect of IPC's oil and gas assets in Canada, France and Malaysia have been aggregated by IPC. Estimates of reserves, resources and future net revenue for individual properties may not reflect the same level of confidence as estimates of reserves, resources and future net revenue for all properties, due to the effects of aggregation. This MD&A contains estimates of the net present value of the future net revenue from IPC's reserves and contingent resources. The estimated values of future net revenue disclosed in this MD&A do not represent fair market value. There is no assurance that the forecast prices and cost assumptions used in the reserve and resources evaluations will be attained and variances could be material.

References to "contingent resources" do not constitute, and should be distinguished from, references to "reserves".

BOEs may be misleading, particularly if used in isolation. A BOE conversion ratio of 6 thousand cubic feet (Mcf) per 1 barrel (bbl) is based on an energy equivalency conversion method primarily applicable at the burner tip and does not represent a value equivalency at the wellhead. As the value ratio between natural gas and crude oil based on the current prices of natural gas and crude oil is significantly different from the energy equivalency of 6:1, utilizing a 6:1 conversion basis may be misleading as an indication of value.

# Management's Discussion and Analysis For the three months ended March 31, 2022

# **Supplemental Information regarding Product Types**

The following table is intended to provide supplemental information about the product type composition of IPC's net average daily production figures provided in this document:

	Heavy Crude Oil (Mbopd)	Light and Medium Crude Oil (Mbopd)	Conventional Natural Gas (per day)	Total (Mboepd)
Three months ended				
March 31, 2022	22.2	8.0	93.6 MMcf (15.6 Mboe)	45.8
March 31, 2021	19.4	8.1	97.2 MMcf (16.2 Mboe)	43.7
Year ended				
December 31, 2021	20.4	8.4	99.9 MMcf (16.7 Mboe)	45.5

This document also makes reference to IPC's forecast average daily production of 46,000 to 48,000 boepd for 2022. IPC estimates that approximately 46% of that production will be comprised of heavy oil, approximately 21% will be comprised of light and medium crude oil and approximately 33% will be comprised of conventional natural gas.

For the three months ended March 31, 2022

#### OTHER SUPPLEMENTARY INFORMATION

#### **Abbreviations**

CAD or CA\$ Canadian dollar

EUR or € Euro USD or US\$ US dollar

MYR Malaysian Ringgit

FPSO Floating Production Storage and Offloading (facility)

#### Oil related terms and measurements

AECO The daily average benchmark price for natural gas at the AECO hub in southeast Alberta

API An indication of the specific gravity of crude oil on the API (American Petroleum Institute) gravity scale

Alkaline surfactant polymer (an EOR process)

bbl Barrel (1 barrel = 159 litres)
boe¹ Barrels of oil equivalents
boepd Barrels of oil equivalents per day

bopd Barrels of oil per day Bcf Billion cubic feet

Bscf Billion standard cubic feet

Empress The benchmark price for natural gas at the Empress point at the Alberta/Saskatchewan border

EOR Enhanced Oil Recovery

GJ Gigajoules Mbbl Thousand barrels MMbbl Million barrels

Mboe Thousand barrels of oil equivalents

Mboepd Thousand barrels of oil equivalents per day

Mbopd Thousand barrels of oil per day
MMboe Million barrels of oil equivalents
MMbtu Million British thermal units
Mcf Thousand cubic feet

MMcf Million cubic feet
NGL Natural gas liquid

SAGD Steam assisted gravity drainage (a thermal recovery process)

WTI West Texas Intermediate (a light oil reference price)
WCS Western Canadian Select (a heavy oil reference price)

<sup>&</sup>lt;sup>1</sup> All volume references to boe are calculated on the basis of six thousand cubic feet of natural gas to one barrel of oil equivalent (6 Mcf: 1 bbl) unless otherwise indicated. This conversion ratio is based on an energy equivalency conversion method primarily applicable at the burner tip and does not represent a value equivalency at the wellhead. Boes may be misleading, particularly if used in isolation. Given that the value ratio based on the current price of crude oil as compared to natural gas is significantly different from the energy equivalency of 6:1, utilizing a conversion on a 6:1 basis may be misleading as an indication of value.
