

## Press release 18/12/2025

## **Estimated nuclear generation in France**

EDF shares its estimates of nuclear generation in France for the next three years.

The estimate of nuclear power generation in France for 2026 and 2027 remains unchanged at 350-370TWh<sup>(1)</sup>.

EDF nuclear generation in France for 2028 is estimated between 345-375TWh<sup>(1)</sup>. This estimate includes increased uncertainties on the evolution of demand and anticipation of modulation of the nuclear reactors.

This nuclear power generation estimate is based on a substantial maintenance programme, which includes the completion of the latest fourth ten-year inspections of the 900MW reactors and the start of the fourth ten-year inspections of the 1,300MW reactors in 2026.

Furthermore, the teams are committed to ensuring a production capacity of over 400TWh per year.

## **About EDF**

The EDF Group is a key player in the energy transition, as an integrated energy operator engaged in all aspects of the energy business: power generation, distribution, trading, energy sales and energy services. The Group is a world leader in low-carbon energy, with an output of 520TWh 94% decarbonised and a carbon intensity of 30gCO2/kWh in 2024, a diverse generation mix based mainly on nuclear and renewable energy (including hydropower). It is also investing in new technologies to support the energy transition. EDF's raison d'être is to build a net zero energy future with electricity and innovative solutions and services, to help save the planet and drive well-being and economic development. The Group supplies energy and services to approximately 41.5 million customers<sup>(1)</sup> and generated consolidated sales of €118.7 billion in 2024.

(1) The customer portfolio consists of electricity, gas and recurring service contracts

(1) Estimate of nuclear generation not taking Flamanville 3 into account.
