## SIKA AG signs license agreement on Photocat Bitumen technology to combat Air Pollution.

SIKA AG, a global leader in building and roofing solutions, has signed a license agreement to utilize Photocat's patented Bitumen technology for its *SikaShield Pure-Air* product line. This technology enhances bitumen waterproofing membranes with air-cleaning properties, addressing one of the world's most pressing challenges: air pollution, which causes over 3 million deaths annually, according to the WHO.

Photocat's innovative solutions, protected by patents, enable air-purifying capabilities in bitumen membranes using either spray-on production methods or pre-coated granulates. This agreement aligns with Photocat's strategy of licensing its technology to global market leaders while maintaining a strong focus on public health and environmental benefits.

**Michael Humle, CEO of Photocat**, stated:

*"We are proud to see our technology adopted by an industry giant like SIKA AG. This agreement marks an important step toward cleaner air and sustainable roofing solutions."*

**Henrik Jensen, CTO of Photocat**, added:

*"From concept to implementation, our NOxOFF™ technology demonstrates its real-world impact. By reducing air pollution, we provide economic value for cities and health benefits for citizens."*

Photocat continues to seek partnerships with key players in the market through licensing agreements and supply solutions. The agreement with SIKA AG underscores the scalability and relevance of Photocat's air-cleaning technology.

**Financial Impact:** This agreement paves the way for long-term growth and market recognition.
