## Stellantis Unveils Multiple World Premiere Software-Driven Products Addressing B2C and B2B Customers

- Global software revenues grow 2.5 times in three years with accretive margins; monetizable connected car parc grows to 13.8 million vehicles
- Stellantis delivered more than 94 million over-the-air (OTA) updates in 2023, enhancing the mobility experience of current owners
- Users of subscription-based products topped 5 million in 2023
- Next-generation technology platforms – STLA Brain, STLA SmartCockpit and STLA AutoDrive – expected for technology integration by the end of 2024
- Stellantis is transforming automotive software with cloud-based design and testing tools, including its Virtual Engineering Workbench, that accelerate development and enhance quality
- A global network of technology development hubs enables 24/7 work cycles, customizing software products for each of the Company's vehicle platforms
- Launched new software products and connected features to existing and new Stellantis brand vehicles:
  - AppMarket in North America is a regularly refreshed in-vehicle hub for services and experiences;
  - e-ROUTES enables BEV routing based on real-time vehicle data with any mobile phone in projected mode in Europe;

- **Free2move Connect Fleet and MyTasks empower commercial vehicle users with live data.**
- **Mobilisights is expanding its customer base, utilizing vehicle data to enhance products and planning while prioritizing privacy and enabling for a smarter world**

AMSTERDAM, June 13, 2024 – Stellantis is enhancing the mobility experience of consumer and commercial owners of vehicles from its 14 iconic brands with a steady stream of new connected features. That effort is delivering a boost to high-margin revenue from software and connected services, which has grown by 2.5 times since 2021, as the number of subscribers globally during that same period has increased to 5 million.

Additionally, the monetizable car parc has grown 15% to 13.8 million vehicles, and Stellantis delivered more than 94 million over-the-air (OTA) updates in 2023, adding and improving features in its existing vehicles.

Those achievements set the foundation for the next chapter of software growth at Stellantis, which is using cloud-based design and testing tools, including the [groundbreaking Virtual Engineering Workbench](#), to redefine automotive software development speed, quality and deployment. The software, developed in-house and with a roster of strategic partners, enables next-generation features for upcoming Stellantis brand vehicles and those on the road today.

“In a little more than two years we have made a decisive shift from a traditional auto industry mindset to operating much more like a startup company, including a sharp focus on speed and building up our own software creation capabilities. It gives us critical flexibility and a competitive advantage going forward,” said Yves Bonnefont, Stellantis Chief Software Officer. “Now we take the next step and begin scaling up, which includes the tech readiness for integration of our transformative STLA Brain, STLA SmartCockpit and STLA AutoDrive AI-powered technology platforms.”

Stellantis has built its in-house capabilities to develop its own software, taking advantage of a global footprint of technology development hubs to work 24/7, building and customizing software products for each of the Company’s vehicle platforms.

The cutting-edge technology platforms are:

- **STLA Brain:** The foundational architecture offers centralized computing full over-the-air access to sensors and actuators. It reduces complexity, enabling the number of electronic control units (ECUs) per vehicle to be reduced by half to

approximately 60 ECUs. New features can be developed in-house in less than six months, one-fourth the time of today's process. Technology readiness for integration is expected by the end of the year, with vehicle integration in 2025.

- **STLA SmartCockpit:** The platform ushers in a new generation of personalization and connected capabilities, powered by machine learning and AI technologies, giving users a seamless integration with their digital lives. A focus on simplified menus with fewer clicks for response to user inputs significantly improves ease of use. AI-enabled experiences give vehicle occupants more options in navigation, media, climate, lighting and productivity features. The key is a digital personal profile that knows your preferences and moves with you between Stellantis brand vehicles. Technology readiness for integration is expected by the end of the year. STLA SmartCockpit debuts in a Stellantis brand vehicle in 2025.
- **STLA AutoDrive:** The system leverages the capabilities of STLA Brain and STLA SmartCockpit to deliver useful and continuously updated Advanced Driver Assistance System (ADAS) technology that is intuitive, robust and inspires driver confidence. STLA AutoDrive targets significantly increasing the uninterrupted time and distance for ADAS-supported driving. The strategy includes industry-leading ADAS that provides drivers with both hands-off/eyes-off-the-road mobility and a fallback to limited hands-off/eyes-on-the-road cruising (Level 2+) in the same system. Eyes-off technology readiness for integration is expected by the end of the year with the commercial launch in 2025.

Stellantis is developing [connected services](#) and software-enabled features for retail and fleet customers under the philosophy of "Make my drive safer, make my life easier, and make my drive more exciting." Features available today in regions around the world include:

**e-ROUTES:** Available in Europe and expanding globally this year, Stellantis is the first automaker to launch a route-planning smartphone app integrated with real-time vehicle data, specifically designed for EVs. Apple CarPlay and Android Auto project e-ROUTES onto the vehicle's central screen. Charge stops are tailored to the driver's preferences, including payment options and minimum battery level.

**ChatGPT enhanced virtual assistant:** After a successful pilot in October 2023, Stellantis is the first OEM to offer ChatGPT as a standard feature for new and existing vehicles, available in 20 European countries by the end of 2024. Conversing in natural

language can help customers learn more about the world around them, the places they are going, or even tell the passengers a story.

**AppMarket:** In North America, AppMarket is the central hub for connectivity, integrating regularly refreshed services and experiences with the ability to purchase subscriptions in the vehicle. AppMarket has been made available over the air in nearly half of Jeep® and Ram vehicles from the 2021 to 2023 model years and will reach 99% of eligible vehicles by the end of 2024. A similar service covers eligible vehicles in Europe.

**Free2move Connect Fleet:** This fleet management platform links a fleet manager with his or her vehicles for real-time visibility. An online dashboard displays vital vehicle health data such as oil life remaining or battery state of charge. Free2move Connect Fleet can also set geofence boundaries and provides real-time geolocation. In case of theft, a tracker helps with recovery.

**MyTasks:** This tool gives drivers all the info they need on the in-vehicle entertainment screen to execute their schedules efficiently, even if there are changes or delays. Fleet managers get automatic updates when tasks are completed or delayed and rescheduled, so all parties can manage the day's progress.

**Mobilisights** is expanding its client base by leveraging data from 13.8 million connected Stellantis vehicles to deliver innovative solutions that not only respect privacy but also enrich its customers' experiences. These insights enhance fleet management, drivers experience, traffic management and urban planning, fostering a smarter and safer transportation world through personalized and anonymized data.

Information on Stellantis software features is available at [www.myconnectedcars.stellantis.com](http://www.myconnectedcars.stellantis.com)

The Stellantis software strategy targets generating about €20 billion in incremental annual revenues by the end of the decade.

## FORWARD-LOOKING STATEMENTS

*This communication contains forward-looking statements. In particular, statements regarding future events and anticipated results of operations, business strategies, the anticipated benefits of the proposed transaction, future financial and operating results, the anticipated closing date for the proposed transaction and other anticipated aspects of our operations or operating results are forward-looking statements. These statements may include terms such as “may”, “will”, “expect”, “could”, “should”, “intend”, “estimate”, “anticipate”, “believe”, “remain”, “on track”, “design”, “target”, “objective”, “goal”, “forecast”, “projection”, “outlook”, “prospects”, “plan”, or similar terms. Forward-looking statements are not guarantees of future performance. Rather, they are based on Stellantis’ current state of knowledge, future expectations and projections about future events and are by their nature, subject to inherent risks and uncertainties. They relate to events and depend on circumstances that may or may not occur or exist in the future and, as such, undue reliance should not be placed on them.*

*Actual results may differ materially from those expressed in forward-looking statements as a result of a variety of factors, including: the ability of Stellantis to launch new products successfully and to maintain vehicle shipment volumes; changes in the global financial markets, general economic environment and changes in demand for automotive products, which is subject to cyclical; Stellantis’ ability to successfully manage the industry-wide transition from internal combustion engines to full electrification; Stellantis’ ability to offer innovative, attractive products and to develop, manufacture and sell vehicles with advanced features including enhanced electrification, connectivity and autonomous-driving characteristics; Stellantis’ ability to produce or procure electric batteries with competitive performance, cost and at required volumes; Stellantis’ ability to successfully launch new businesses and integrate acquisitions; a significant malfunction, disruption or security breach compromising information technology systems or the electronic control systems contained in Stellantis’ vehicles; exchange rate fluctuations, interest rate changes, credit risk and other market risks; increases in costs, disruptions of supply or shortages of raw materials, parts, components and systems used in Stellantis’ vehicles; changes in local economic and political conditions; changes in trade policy, the imposition of global and regional tariffs or tariffs targeted to the automotive industry, the enactment of tax reforms or other changes in tax laws and regulations; the level of governmental economic incentives available to support the adoption of battery electric vehicles; the impact of increasingly stringent regulations regarding fuel efficiency requirements and reduced greenhouse gas and tailpipe emissions; various types of claims, lawsuits, governmental investigations and other contingencies, including product liability and warranty claims and environmental claims, investigations and lawsuits; material operating expenditures in relation to compliance with environmental, health and safety regulations; the level of competition in the automotive industry, which may increase due to consolidation and new entrants; Stellantis’ ability to attract and retain experienced management and employees; exposure to shortfalls in the funding of Stellantis’ defined benefit pension plans; Stellantis’ ability to provide or arrange for access to adequate financing for dealers and retail customers and associated risks related to the operations of financial services companies; Stellantis’ ability to access funding to execute its business plan; Stellantis’ ability to realize anticipated benefits from joint venture arrangements; disruptions arising from political, social and economic instability; risks associated with Stellantis’ relationships with employees, dealers and suppliers; Stellantis’ ability to maintain effective internal controls over financial reporting; developments in labor and industrial relations and developments in applicable labor laws; earthquakes or other disasters; risks and other items described in Stellantis’ Annual Report on Form 20-F for the year ended December 31, 2023 and Current Reports on Form 6-K and amendments thereto filed with the SEC; and other risks and uncertainties.*

*Any forward-looking statements contained in this communication speak only as of the date of this document and Stellantis disclaims any obligation to update or revise publicly forward-looking statements. Further information concerning Stellantis and its businesses, including factors that could materially affect Stellantis’ financial results, is included in Stellantis’ reports and filings with the U.S. Securities and Exchange Commission and AFM.*
