

TSplus Remote Access vs Microsoft RDS vs Citrix

See how TSplus Remote Access compares to Microsoft RDS and Citrix.

Feature	TSplus Remote Access	Microsoft RDS	Citrix
Deployment	Quick and simple installation; minimal setup time.	Requires expertise for initial setup and configuration.	Complex setup; often requires specialized personnel.
User Onboarding	User-friendly interface for easy account setup.	Integration with Active Directory can streamline onboarding.	Involves extensive configuration and user training.
Performance	Efficient use of resources for smooth remote sessions.	Generally good performance but can vary based on configuration.	Strong performance but can be demanding on server resources.
Scalability	Easily scalable to accommodate growing user base.	Scalable, but scalability planning is essential.	Scalable, though complex scaling may require additional components.
Maintenance	Automated updates and patches; minimal downtime.	Regular updates and patches; downtime for updates.	Frequent updates; planned downtime for maintenance.
Security	Two-factor authentication and SSL encryption for data security.	Relies on built-in security features; additional measures may be needed.	Comprehensive security features, but complexity can lead to misconfigurations.
Cost-Effectiveness	Affordable pricing with various licensing options.	Licensing costs can be high, especially for larger deployments.	Higher licensing and infrastructure costs.
Integration	Integrates with existing IT infrastructure with ease.	Seamless integration with Microsoft ecosystem.	Integration can be complex, especially in diverse environments.
Support	Responsive customer support for quick issue resolution.	Microsoft support available, but response times vary.	Comprehensive support, but complex issues might take longer to resolve.
